

Python developer with a solid foundation in algorithms, data structures and logical problem-solving focused in delivering tangible results. My skills extend to backend and data-related tasks, further enhancing my ability to contribute effectively to projects.

I pay attention to details, knowing that understanding client's requirements correctly ensures I provide a solid solution through code. I'm highly proactive in team communication, always informing my colleagues about what I'm working on or where I'm facing challenges in developing a particular feature.

Combined with my C1 level in English and adaptability, I'm always eager to work with people from different countries and cultures. I thrive by interacting with individuals from diverse backgrounds and experiences.

Technologies and Languages

- **Languages:** Python, Java, SQL
- **Technologies** Django, Django REST, Postgres, Pandas, Git, AWS
- **Tools:** Postman, Bruno, Trello, Slack, Discord, Notion
- **Other:** Data structures and Algorithms, SOLID principles, remote server deployment, SCRUM, Cloud, Bash / Linux

Work Experience

VORDENTECH

Feb 2024 - present

US based company dedicated to the development of software solutions related to data engineering, ETL processes, and web development.

Among my daily tasks are:

- Software solutions development with **Python**
- Data extraction, transformation, and loading (**ETL**) processes
- Data pipelines
- Solutions on AWS leveraging various serverless services
- Code refactoring and documentation
- Communication with clients.

Education and Certifications

- **Python Backend Bootcamp**,Codigo Facilito (2023)
- **Django Web Framework**, Coursera (2023)
- **Full Stack Bootcamp**, Fundacion Pescar (2022)
- **Python 3 Course**, Udemy (2021)

Projects

- **Devium** - API built with Django REST that allows users to register and log in, publish articles in text format, edit, and delete them. Source code [here](#).
- **Technical blogging** on esvdev.me - Personal blog built with Django, Django REST, Wagtail CMS, Astro and TailwindCSS. Source code [here](#)

More info about the projects on [my personal website](#)
