About Me

I'm a full-stack developer with experience in both frontend and backend work, gained through internships, freelance projects, university work, and a full-time role. Over the years, I've worked on a range of projects that helped me grow not just technically, but also in how I communicate and collaborate. I enjoy building useful, well-designed applications and always look for ways to improve and bring value to the people I work with.

Skills

- JavaScript
- TypeScript
- Vue
- React
- .NET
- Kubernetes

Experience

Front-End Developer
One New Experience   2021 - 2025

I spent four years at One New Experience, working on a variety of projects, from updating legacy systems to building new ones from scratch. This dynamic environment helped me grow, adapt, and develop valuable skills.

Full-Stack Developer
Retro Cloud Studios   2024 - 2025

As a freelancer, I built the Retro Cloud Studios website, a platform designed to showcase the studio's work, services, and ease communication with clients. This project strengthened my technical expertise, project management, and client interaction skills.

Projects

Technical Printing Application
Tobacco industry

Main developer for an internal administration application to manage sensitive data and streamline print job operations. Managed an entire UI facelift, updating the application and refactoring legacy code to meet industry standards.

Client Voice Application
Banking industry

Designed and developed a dashboard-style application to manage client feedback data which improved decision-making and customer satisfaction in the banking sector. Established a secure authentication system for access control, ensuring data security guidelines are being met.

Education

Bachelor of Computer Science
University Valahia, Târgoviște   2019 - 2023

I studied Computer Science at Valahia University, it was a great experience. I got to work on a lot of hands-on projects and internships, which really helped me understand how things work in practice in IT, not just in theory.
