FENIX NTM

Introducing FENIX NTM®: the innovative, smart material designed for contemporary living. High performance, low maintenance and extremely durable, FENIX NTM is the perfect material for a modern kitchen worktop.

Made using next generation acrylic resins, all FENIX NTM worktops deliver extremely low light reflectivity resulting in breathtaking ultra-matt aesthetics. FENIX NTM is made using a proprietary technology that creates a surface which is soft to the touch and anti-fingerprint, providing a luxurious centrepiece for your kitchen with a premium feel that only requires simple everyday care. The thermal-healing properties of FENIX NTM allow you to repair superficial micro-scratches meaning your FENIX NTM worktops will look stunning for years to come.

FENIX NTM worktops are available in ten elegant colours and two unique constructions – Solid FENIX NTM and Bonded FENIX NTM, allowing you to choose the perfect worktop for your home.

Solid FENIX NTM worktops

Solid FENIX NTM is the ultimate contemporary kitchen worktop. Featuring an ultra-modern slimline 12mm profile, these worktops combine technical excellence with unmatched style. Made entirely from FENIX NTM, these worktops are highly resistant to heat, impact and are also waterproof, meaning they are compatible with undermount sinks.

Bonded FENIX NTM worktops

Bonded FENIX NTM worktops have a standard 39mm profile. These surfaces are durable, highly resistant to heat, impact and are water repellent meaning they will last significantly longer than more traditional alternatives. Bonded FENIX NTM worktops are an effective way to bring all the benefits of next-generation FENIX NTM surfaces into your home at a lower cost than Solid FENIX NTM.

Complete your kitchen with complementary accessories

Complete a premium, seamless kitchen aesthetic by including a beautifully designed ceramic composite sink that is visually colour-matched* to each FENIX NTM worktop colour. Stain repellent and with UV protection that prevents discolouration, these kitchen sinks are a stylish and durable choice.

Colour-matched splashbacks and upstands are also available and offer the perfect alternative to tiling and create a beautiful joint between your worktop and walls. FENIX NTM splashbacks are perfect for creating a statement cooking space.

*PLEASE NOTE:
a colour-matched sink is not available for Piombo Doha or Titanio Doha.

FEATURES

Low light reflectivity
Extremely matt surface

Soft touch

Anti-fingerprint

Thermal healing of
superficial microscratches

BONDED FENIX NTM® PIOMBO DOHA

SOLID FENIX NTM® NERO INGO

SOLID FENIX NTM® PIOMBO DOHA

SOLID FENIX NTM® BIANCO KOS

FENIX INTEGRATED SOLUTIONS - SINKS

Integrated sinks are an elegant and harmonic choice, combining high performance with contemporary aesthetics. Each sink complements both Solid FENIX NTM and Bonded FENIX NTM worktops and is visually colour-matched to each worktop colour for a beautiful aesthetic that defines modern kitchen design.

All sinks are made from a special matt-composite material, blending innovative acrylic resins and ceramic particles. The sink material also creates a "lotus effect", allowing for the rapid flowing of water and easy cleaning.

The stunning ultra-matt look of these sinks contrasts with the chromed elements for an eye-catching, premium look. 100% water repellent, stain resistant and with UV protection that prevents discolouration over time, these sinks are built for high performance.

All sinks come in 500mm and 720mm widths. They can be installed overmount using the drop-in method on Bonded FENIX NTM worktops and installed overmount or undermount on Solid FENIX NTM worktops for the ultimate in contemporary aesthetics.

CARING FOR YOUR FENIX WORKTOPS

No special maintenance is required: just a damp cloth with warm water and a household degreaser. Almost all regular household cleaning products or disinfectants can be safely used.

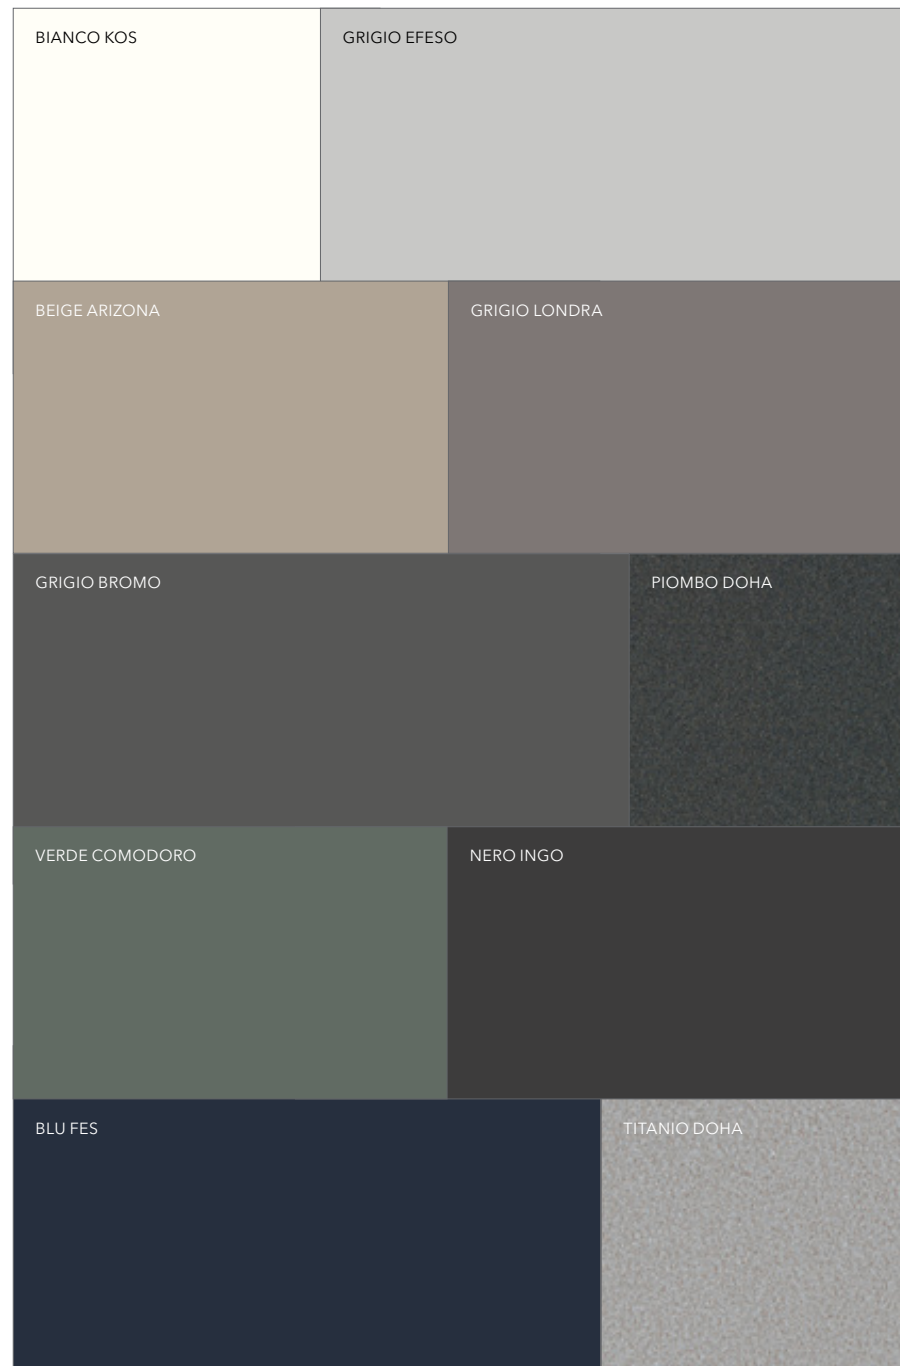

Thermal healing of superficial micro-scratches is also possible. By using an iron and a damp towel/cloth, thermal healing can be applied to the relevant area of the product if scratches have not penetrated the surface.
