4.

Harvested from sustainable forests

5.

Hygienic, making them the perfect kitchen surface

6.

In stock and ready to be delivered

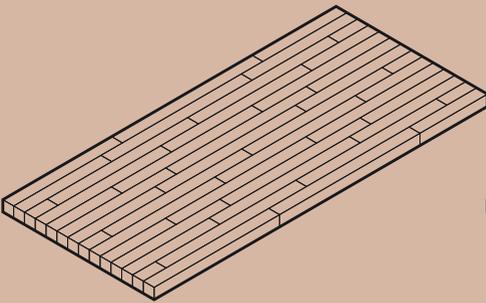

Full Stave Black American Walnut

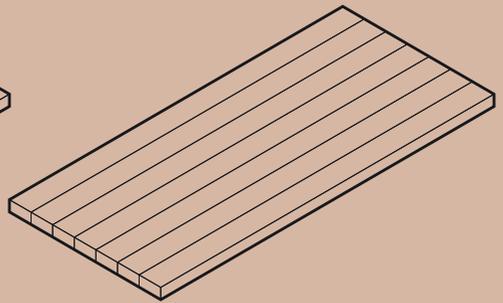

Helping you make the perfect choice

Stave types available

A stave is each piece of solid timber and all of our worktops are constructed from multiple staves. Variations in stave size and length change the appearance of the worktop. All of our worktops are available as "Standard" stave. This means it is made using 40mm wide staves that vary in length. Some of our worktops are available as "Full Stave" meaning each stave is individually selected and laid out in a unique pattern that runs the entire length of the worktop. Full Stave worktops allow the natural beauty of the timber to stand out more, creating a seamless and elegant look.

Standard Stave

Full Stave

Standard or Prime?

Standard wooden worktops will have some natural colour variation between each stave, and the grain pattern is distinctive and varied. Prime worktops have individually selected staves for a more consistent grain pattern and even colouration. This gives Prime worktops a more uniform finish with fewer natural imperfections allowing it to elevate a natural warmth.

Oak

A timelessly popular surface with plenty of classic charm, oak worktops never go out of style. These surfaces will deepen in colour and darken over time for a traditional look with organic character. The natural integrity of solid wood ensures durability alongside classic style.

Prime Oak

Prime Oak worktops are created from specially selected timbers for a sleek uniform appearance and fewer natural imperfections. These popular surfaces are crafted from the finest quality raw materials to offer durability combined with the natural beauty and character of solid oak.

Full Stave Oak

Experience the true beauty of this characterful timber with our Full Stave Oak worktops.

These worktops feature a tight grain pattern which creates superb colour consistency along the staves, making them the ultimate example of oak's natural appearance. This distinctive look is achieved by careful selection of only the finest oak trees in Burgundy, Allier in central France, where deep, rich loamy soils help provide an excellent environment to produce this luxurious timber.

Full Stave Prime Oak

These worktops are the pinnacle of our oak range and are expertly crafted to highlight the beautiful golden grain and natural character.

With minimal natural imperfections and colour variations, these spectacular worktops are constructed from timbers selected for their flawless consistency, meaning they are as close to perfection as a natural product can achieve. The refined and elegant look is achieved thanks to the perfect growing conditions in Burgundy, Allier in central France and through a careful and meticulous selection process of only the most exquisite timbers.

Black Oak

Dark and luxurious, Black Oak worktops offer an opulent twist on this ever-popular timber and are a striking addition to any kitchen. Beautifully displaying the charming and familiar oak grain pattern, these surfaces are blackened via a unique treatment that preserves the wood's natural qualities.

Walnut

Featuring colours ranging from pale golden hues to deep chocolate shades, Walnut worktops have a distinctive look combined with a naturally varying grain pattern. These surfaces offer a unique aesthetic that is endlessly popular and works equally in traditional and contemporary kitchens.

Black American Walnut

Sophisticated and rich, Black American Walnut worktops feature a unique grain pattern accentuated by the dark tones that deepen gradually over time. A durable and stylish surface that looks beautiful in both traditional and contemporary kitchens.

Full Stave Black American Walnut

A luxurious choice that adds elegance and style, our Full Stave Black American Walnut worktops showcase this wood's deep tones and delicate grain as no other construction could. This surface is as durable and hard wearing as it is stylish.

Maple

An elegant choice for any home, Maple worktops feature a delicate grain pattern and pale colourings that provide a bright, fresh look. Equally at home in traditional or modern kitchens, these honey-coloured timbers have been a favourite worktop material for many centuries due to their superior density and attractive appearance.

Birch

With a naturally iridescent sheen, Birch worktops feature a pale, honey tone and varied grain pattern that makes them an elegant and attractive choice. Birch is a timber that serves well as a hardwearing and robust worktop, that offers durability you can rely on for years to come.

Bamboo

Incredibly hard wearing and naturally watertight, bamboo worktops offer a unique look with neat layers of staves that create a striking pattern. Bamboo worktops are full of character with a straight grain pattern and a beautiful golden surface and are one of the most sustainable materials on earth.

Sustainable Choice

Caramel Bamboo

With a straight grain pattern separated neatly by nodes and a beautiful caramelised golden surface, Caramel Bamboo worktops are full of warmth and personality. Made from one of the world's most sustainable materials, Caramel Bamboo worktops are hard wearing and naturally watertight as they are constructed from compressed, layered timber sections.

Sustainable Choice

Beech

Beech worktops feature a charming, varied and prominent grain pattern, bringing a unique and welcoming look to any kitchen. This naturally durable timber is a versatile choice that can live up to the demands of a busy kitchen.

Prime Beech

Featuring a warm tone and soft grain pattern, our Prime Beech worktops have been created from staves carefully chosen for their consistency. Each worktop is constructed from specially selected hardwood to ensure a beautifully even and consistent finish. Prime Beech worktops are a durable choice, perfect for any kitchen.

Iroko

Iroko worktops are made from an African timber that darkens significantly when oiled, developing over time to a rich bronze hue. Featuring a unique spotted grain pattern with occasional linear markings, Iroko has a naturally high oil content making it exceptionally hardwearing and hygienic.

Please Note:

Images show Iroko worktops that have been oiled - unoiled Iroko worktops will be significantly lighter when delivered.

Full Stave Iroko

A stunning centrepiece for the heart of your home, Full Stave Iroko worktops feature warm bronzed hues that gradually deepen over time to a rich chestnut. This exotic timber is naturally high in oils, making it exceptionally hardwearing and water-resistant. The extra-wide staves offer a perfect display of the stunning natural charm of Iroko timber.

Cherry

With a bright and warm appearance, cherry worktops are perfect to create a welcoming look in your home. Cherry wood features an attractive linear grain pattern in a warm caramel shade. These vibrant work surfaces are also very hardwearing, making them perfect for the demands of a busy life.

Sapele

Sapele worktops have a beautiful chestnut hue that brings richness and warmth. The varied grain pattern on this exotic timber features a variety of spotted and curly formations, which result in a beautiful surface that is naturally stunning and incredibly hardwearing.

Full Stave Iroko

Complete the look

To complete the stunning solid wood look in your kitchen, you can pair our worktops with matching upstands and plinths.

They're made from the same exceptional quality timber and are a great way to conceal the gap between the worktops and walls to create a seamless and beautiful aesthetic in your kitchen.

Speak to your kitchen studio/worktop supplier for more information.

Caring for your wooden worktops

Oiling

Wood is a natural material and oiling is recommended to maintain your worktops' beautiful look for years to come. Treatment is simple and should be completed regularly to allow them to build a strong barrier against moisture.

We recommend Danish oil, as it will bring out the wood's natural lustre whilst offering excellent protection. We suggest you regularly re-apply oil to the worktop during the first six weeks after installation. After this period, you should re-oil your worktop every three months to ensure the surface remains resilient.

Maintenance

Cleaning and maintaining your worktops is easy - simply wipe them down regularly with a damp (not wet) lint-free cloth, warm water and a small amount of soap. There's no need to use multi-purpose cleaning products or scouring pads as they may damage your worktops. Make sure to wipe up any spillages immediately with a clean, dry cloth to avoid staining.

Preserve your worktops' beautiful look for longer by avoiding hot pans or sharp objects coming into direct contact with them. Simply place a chopping board, butcher's block or trivet on top of your worktop to protect the surface and keep it looking its best.

Speak to your kitchen studio/worktop supplier for more information on oiling your worktops.
