by  AgriWater
Golf

RainBox - the ultimate solution for improving your golf course's water. With the RainBox, you can improve water quality, while enhancing water use efficiency, all while saving money in the process – MAKING EVERY DROP COUNT.

The RainBox uses cutting-edge technology to mimic rainwater, buffer pH, and dramatically increase oxygen in the soil. Plus, it may reduce water usage, making it an eco-friendly choice.

RainBox water treatment facilitates grasses growing longer roots and more hair roots, resulting in healthier more resilient turf. Tee to green, your golf course will look and feel more playable.

Upgrade to the RainBox and see the difference it can make for your golf course today

Stewart Creek Golf Course Results

CANMORE, AB
CANADA

On July 29, 2023, RainBox staff visited the course and met with the course superintendent to review the state of the course and the changes since RainBox installation in May of this year.

The condition of the fairways and greens reflects Stewart Creek's commitment to both course playability and course aesthetics.

Conversation with Sean, Stewart Creek's Director of Agronomy was complimentary to the RainBox system.

SIGNIFICANT OBSERVATIONS:

- There is no longer any puddling of irrigation water.
- Wetting agents have not been required (one application of wetting agent was done at startup).

Our visit corresponded with the end of a long duration irrigation cycle and of note was the absence of any pooling or puddling, indicating that the water has been able to penetrate into the soil quickly, and that the water holding capacity has increased.

The fairways were 'springy' and recovered from traffic readily.

Why Choose Us?

At AgriWater, we revolutionize irrigation with our cutting-edge RainBox technology, designed to mimic natural rainwater and enhance soil health. Our Advanced Oxidation Process (R-AOP) boosts water absorption, reduces irrigation frequency, and increases plant and soil health.
