Evaluation Report

No: QDCPCH25000379-02_EN

Date: Aug 07 2025

Client name: KINIRVA LIMITED
Client address: WORKSHOP 60,3/F,BLOCK A,EAST SUN INDUSTRIAL CENTRE NO.16 SHING YIP STREET KOWLOON

Sample name: Tamra Hair wash + Tamra Hair oil
Batch No./Date: TAP-00502/2025-01/2028+ TAP-00602/2025-01/2028
Manufacturer Name: TAMRA AYURVEDA LLP

Above sample(s) was/were submitted and certified by the client, SGS quoted the information with no responsibility as to the accuracy, adequacy and/or completeness.

SGS job No.: QDCPCH25000379
SGS reference No.: /
Date of receipt: 2025-04-14
Evaluation Period: 2025-04-16~2025-06-25

Evaluation Requested:

Selected item(s) as requested by applicant:

Cosmetic efficacy evaluation

Evaluation Method:

Protocol scheme

Evaluation Result/Conclusion:

31 healthy Chinese female subjects used the evaluation product 56 days according to the instructions. Under the test conditions, the evaluation results showed that the investigational product had the effects of moisturizing, soothing, hair - caring, oil - controlling and improving hair density, and the product was gentle (non-irritating).

1. Summary

Evaluation Product: Tamra Hair wash+Tamra Hair oil

Evaluation Objective: Under normal conditions, the moisturizing, soothing, hair - care, oil - control, and gentle (non - irritating) efficacy of the test product, as well as its effect on improving hair density, were evaluated by adult subjects who used the product as directed for 56 consecutive days.

Evaluation Basis: Protocol scheme

Subjects: A total of 31 healthy head skin Chinese female adults, aged from 20 to 58 years old, with a mean age of 41.19±11.34 and all met the inclusion and exclusion criteria.

Evaluation Position: Head

Usage Method: ... D-14~D0

After wetting hair, take an appropriate amount of hair wash, gently massage the scalp, and thoroughly rinse off.

3-5 times a week.

D0~D56

1. Take an appropriate amount of hair oil in the palm of your hand and gently massage your hair and scalp from the roots to the ends for 3-5 minutes. Leave the essential oil on your scalp and hair for 30 minutes before preparing to wash your hair.

2. After wetting hair, take an appropriate amount of hair wash, gently massage the scalp, and thoroughly rinse off.

Hair wash / hair oil: 3-5 times a week.

Application Period: 56 days

Evaluation Period: D-14, D0 (Baseline), D0Timm (Immediately after application) , D0T4H (4 hours after application) , D28 (28 days after application) , D56 (56 days after application)

Evaluation Parameters: 1. Camera was used for photo capture.

2. Trichoscan was used for photo collection and analysis of hair density, hair count, and hair growth rate.

3. Counter/comb was used for hair loss count analysis

4. Head skin sebum was measured using the Sebumeter® SM815.

- 5. Dermatologist assessment was conducted.
- 6. Subject self-assessment was performed.

Study Design:

Before evaluation

Qualified subjects who met the assessment requirements will be screened by the laboratory technician, who will record the subject's facial Fitzpatrick type and skin type (dry, combination to dry, normal, oily, or combination to oily skin).

D-14

Upon arriving at SGS, the subjects sat for 30 minutes in a laboratory at a temperature of 21±2°C and 50±10% RH.

The laboratory technician conducted 60 hair combing counts on the subjects.

The technician distributed evaluation products, instructed subjects to use them according to the product usage instructions and specified usage areas, and provided written test precautions and product usage logs.

Subjects left SGS.

Baseline (D0)

Upon arriving at SGS, the subjects sat for 30 minutes in a laboratory at a temperature of 21±2°C and 50±10% RH.

The laboratory technician conducted 60 hair combing counts on the subjects.

The laboratory technicians measured skin sebum (Sebumeter).

The laboratory technicians captured an image.

The dermatologist conducted an assessment.

The subjects were shaved by a laboratory technician (a hair-cutting area of at least 1.5 cm × 1.5 cm was marked and fixed on the subjects' head, slightly towards the temple side of the crown. The location was marked to ensure consistency of the shaved area during each visit, and the hair was cut to a residual length of no more than 1 mm).

The laboratory technician took Trichoscan photographs of the shaved area.

The subject completed the questionnaire.

The laboratory technician weighed and collected the samples.

The laboratory technician explained the sample usage method to the subject, distributed the test samples, and the subject used the test samples on-site under the supervision of the laboratory technician (according to the

randomization table, one half of the head used the test combination sample, while the other half used water). Any adverse reactions were to be recorded promptly in the usage log.

Immediately after application (D0Timm)

The laboratory technicians measured skin sebum (Sebumeter).

4 hours after application (D0T4h)

The laboratory technicians measured skin sebum (Sebumeter).

Subjects left SGS.

28 days after application (D28)

Upon arriving at SGS, the subjects sat for 30 minutes in a laboratory at a temperature of 21±2°C and 50±10% RH.

The laboratory technician conducted 60 hair combing counts on the subjects.

The laboratory technicians captured an image.

The dermatologist conducted an assessment.

The subjects were shaved by a laboratory technician (a hair-cutting area of at least 1.5 cm × 1.5 cm was marked and fixed on the subjects' head, slightly towards the temple side of the crown. The location was marked to ensure consistency of the shaved area during each visit, and the hair was cut to a residual length of no more than 1 mm).

The laboratory technician took Trichoscan photographs of the shaved area.

The subject completed the questionnaire.

The laboratory technician weighed and checked the samples.

Subjects left SGS.

56 days after application (D56)

Upon arriving at SGS, the subjects sat for 30 minutes in a laboratory at a temperature of 21±2°C and 50±10% RH.

The laboratory technician conducted 60 hair combing counts on the subjects.

The laboratory technicians captured an image.

The dermatologist conducted an assessment.

The subjects were shaved by a laboratory technician (a hair-cutting area of at least 1.5 cm × 1.5 cm was marked and fixed on the subjects' head, slightly towards the temple side of the crown. The location was marked to

ensure consistency of the shaved area during each visit, and the hair was cut to a residual length of no more than 1 mm).

The laboratory technician took Trichoscan photographs of the shaved area.

The subject completed the questionnaire.

The laboratory technician weighed and collected the samples, and checked the usage log of the returned samples.

Subjects left SGS.

Statistical Analysis:

The data were statistically analyzed using SPSS 28.0. The Shapiro-Wilk (S-W) test was used to assess the normality of the evaluation/test data, with a significance level of $\alpha = 0.05$. If the evaluation/test data followed a normal distribution, paired t-tests were used for statistical analysis; otherwise, Wilcoxon signed-rank tests were applied. Ordinal data were analyzed using rank-sum tests. The significance level for all statistical tests was set at $\alpha = 0.05$.

The analysis aimed to determine whether there were statistically significant differences in parameter values at each time point compared to the baseline, and to calculate the number of valid subjects.

Some of the data in this report have been processed through rounding and digit retention. As a result, there may be slight discrepancies between the calculated data results and the displayed results. This is a normal data-processing phenomenon and does not affect the interpretation and analysis of the data.

Attention: To check the authenticity of testing /inspection report & certificate, please contact us at telephone: (86-755) 8307 1443, or email: CN.Doccheck@sgs.com

Evaluation basis:

Moisturizing

Compared with baseline, at any visit point after using the product (D28, D56), the scores for moisturizing-related questions in the self-assessment questionnaire are improved significantly, it is considered that the product has moisturizing effect, otherwise it is considered that the product has no moisturizing effect.

Soothing

Compared with baseline, at any visit point after using the product (D28, D56), the scores for soothing-related questions in the self-assessment questionnaire are improved significantly, it is considered that the product has soothing effect, otherwise it is considered that the product has no soothing effect.

Hair Care

Compared with baseline, at any visit point after using the product (D28, D56), the scores for hair care-related questions in the self-assessment questionnaire are improved significantly, it is considered that the product has hair care effect, otherwise it is considered that the product has no hair care effect.

Gentle (Non-irritating)

Compared with baseline, at any visit point after using the product (D28, D56), the scores for gentleness (non-irritating)-related questions in the self-assessment questionnaire are improved significantly, it is considered that the product is gentle (non-irritating), otherwise it is considered not gentle (irritating).

Oil Control

Compared with control, 4 hours after product application, the scalp sebum content is reduced significantly, it is considered that the product has oil control effect, otherwise it is considered that the product has no oil control effect.

Improvement of Hair Density

Compared with baseline, at any visit point after using the product (D28, D56), physician's overall assessment of hair density, dermoscopic analysis of hair count and density, or hair loss count—any parameter is improved significantly, it is considered that the product has effect on improving hair density, otherwise it is considered that the product has no effect on improving hair density.

Evaluation Results:

1) Instrument measurements-long term

Parameter (Instrument) (Site)	Time point	Rate of change	Significant difference compared with before application (p value)	Improved subjects (Improved subjects %)	Remarks
Hair density (Trichoscan) (Shaved area)	D28	2.81%	Significantly (p=0.001)	26 (84%)	Larger analytical value indicates an improved hair density.
	D56	5.27%	Significantly (p<0.001)	25 (81%)	
Hair count (Trichoscan) (Shaved area)	D28	2.86%	Significantly (p<0.001)	26 (84%)	Larger analytical value indicates an improved hair count.
	D56	5.12%	Significantly (p<0.001)	25 (81%)	
Hair loss count (Counter/comb) (Hair)	D14	-12.98%	Significantly (p<0.001)	25 (81%)	Smaller measurement indicates an improved hair loss count.
	D28	-25.11%	Significantly (p<0.001)	31 (100%)	

2) Instrument measurements-long term

Parameter (Instrument) (Site)	Time point	Mean value	Improved subjects (Improved subjects %)	Remarks
Hair growth rate (hair density) (n/cm ² /d) (Trichoscan) (Shaved area)	D28	0.124	26 (84%)	Larger analytical value indicates an improved hair growth rate.
	D56	0.116	25 (81%)	
Hair growth rate (hair count) (n/d) (Trichoscan) (Shaved area)	D28	0.239	26 (84%)	Larger analytical value indicates an improved hair growth rate.
	D56	0.214	25 (81%)	

3) Instrument measurements-short term (compared with before application)

Parameter (Instrument) (Site)	Area	Time point	Rate of change	Significant difference compared with before application (p value)	Significant difference compared with control side (p value)	Improved subjects (Improved subjects %)	Remarks
Skin sebum (Sebumeter®)	Test side	D0Timm	-81.00%	Significantly (p<0.001)	Significantly (p<0.001)	31 (100%)	Smaller measurement

became fluffy and the face looked smaller after use, 100% agreed that they felt the top of their skull had become higher after use, 100% agreed that they felt a reduction in dandruff after use, 100% agreed that the product was easy to rinse, and 100% agreed that the product's smell was pleasant.

4 hours after application, 97% of the subjects agreed that the scalp felt clean after use, 97% agreed that the scalp felt comfortable after use, 97% agreed that the product improved scalp oil secretion after use, 97% agreed that the product helped regulate the scalp's water-oil balance after use, 97% agreed that the scalp felt clean and refreshing after use, 97% agreed that the hair strands felt moist and not dry after use, 97% agreed that the scalp felt moisturized and not tight after use, 97% agreed that the hair strands felt smooth and did not tangle after use, 97% agreed that the product improved dry and frizzy hair after use, 97% agreed that the hair had shine after use, 97% agreed that the product helped relieve scalp itching after use, 97% agreed that the product helped improve scalp redness after use, 97% agreed that the hair strands felt light after use, 97% agreed that the hair felt voluminous after use, 97% agreed that they felt an increase in visual hair volume after use, 97% agreed that the hair was not flat-collapsed after use, 97% agreed that the hair became fluffy and the face looked smaller after use, 97% agreed that they felt the top of their skull had become higher after use, 97% agreed that they felt a reduction in dandruff after use, 97% agreed that the product was easy to rinse, and 97% agreed that the product's smell was pleasant.

28 days after application, 100% of the subjects agreed that the scalp felt clean after use, 100% agreed that the scalp felt comfortable after use, 100% agreed that the product was gentle and non-irritating after use, 100% agreed that the product improved scalp oil secretion after use, 100% agreed that the product helped regulate the scalp's water-oil balance after use, 100% agreed that the scalp felt clean and refreshing after use, 100% agreed that the hair strands were moist and not dry after use, 100% agreed that the scalp was moisturized and not tight after use, 100% agreed that the hair strands were smooth and did not tangle after use, 100% agreed that the product improved dry and frizzy hair after use, 100% agreed that the hair had shine after use, 100% agreed that the product helped relieve scalp itching after use, 100% agreed that the product helped improve scalp redness after use, 100% agreed that the product repaired the scalp barrier after use, 100% agreed that the hair strands felt light after use, 100% agreed that the hair felt voluminous after use, 100% agreed that they felt an increase in visual hair volume after use, 100% agreed that the hair was not flat-collapsed after use, 100% agreed that the hair became fluffy and made the face look smaller after use, 100% agreed that the product helped achieve a high-top effect after use, 100% agreed that the hair became plump and bouncy after use, 97% agreed that the product's smell was pleasant, 100% agreed that they felt an increase in hair volume after using the product, 100% agreed that more small strands of hair appeared after using the product, 100% agreed that they felt less hair loss when washing their hair after using the product, 100% agreed that the product effectively improved hair loss after use, 100% agreed that the hair felt thicker and harder after using the product, 100% agreed that the gaps between hair strands were improved after using the product, 100% agreed that their hairline was improved after using the product, 97% agreed that scalp oil secretion decreased after using the product, 100% agreed that hair split ends or frizz decreased after using the product, and 100% agreed that dandruff decreased after using the product.

56 days after application, 100% of the subjects agreed that the scalp felt clean after use, 100%

agreed that the scalp felt comfortable after use, 100% agreed that the product was gentle and non-irritating after use, 100% agreed that the product improved scalp oil secretion after use, 100% agreed that the product helped regulate the scalp's water-oil balance after use, 100% agreed that the scalp felt clean and refreshing after use, 100% agreed that the hair strands were moist and not dry after use, 100% agreed that the scalp was moisturized and not tight after use, 100% agreed that the hair strands were smooth and did not tangle after use, 100% agreed that the product improved dry and frizzy hair after use, 100% agreed that the hair had shine after use, 100% agreed that the product helped relieve scalp itching after use, 100% agreed that the product helped improve scalp redness after use, 100% agreed that the product repaired the scalp barrier after use, 100% agreed that the hair strands felt light after use, 100% agreed that the hair felt voluminous after use, 100% agreed that they felt an increase in visual hair volume after use, 100% agreed that the hair was not flat-collapsed after use, 100% agreed that the hair became fluffy and made the face look smaller after use, 100% agreed that the product helped achieve a high-top effect after use, 100% agreed that the hair became plump and bouncy after use, 97% agreed that the product's smell was pleasant, 100% agreed that they felt an increase in hair volume after using the product, 100% agreed that more small strands of hair appeared after using the product, 100% agreed that they felt less hair loss when washing their hair after using the product, 100% agreed that the product effectively improved hair loss after use, 100% agreed that the hair felt thicker and harder after using the product, 100% agreed that the gaps between hair strands were improved after using the product, 100% agreed that their hairline was improved after using the product, 97% agreed that scalp oil secretion decreased after using the product, 100% agreed that hair split ends or frizz decreased after using the product, 100% agreed that dandruff decreased after using the product, 100% agreed that overall satisfaction with the product's effect/effectiveness was achieved after use, 100% agreed that they were willing to continue using this product after use, 100% agreed that they were willing to recommend the product to family and friends after use, 100% agreed that the product met the overall needs for hair care, 100% believed that the product was suitable for sensitive skin, and 100% believed that the product was mild and non-irritating.

Conclusion:

31 healthy Chinese female subjects used the evaluation product 56 days according to the instructions. Under the test conditions, the evaluation results showed that the investigational product had the effects of moisturizing, soothing, hair - caring, oil - controlling and improving hair density, and the product was gentle (non-irritating).

2. Evaluation Parameter

2.1. Facial image acquisition

The camera was used for photo capture.

Trichoscan was used for photo collection and analysis of hair density, hair count, and hair growth rate. Larger analytical value of hair density indicates an improved hair density. Larger analytical value of hair count. indicates an improved hair count. Larger analytical value of hair growth rate indicates an improved hair growth rate.

2.2. Skin sebum

The skin sebum was measured by the Sebumeter® SM815. Smaller measurements indicate a decreased skin sebum.

2.3. Hair loss count

Counter/comb used for hair loss count analysis. Smaller measurement indicates an improved hair loss count.

2.4. Dermatologist assessment

The dermatologist conducted an overall hair density assessment based on the subjects' scalp hair condition and the photographs taken. Evaluation standard: 0 to 7 point rating scale (0 points indicates no hair, 1 point indicates extremely sparse, scalp clearly visible, 2 points indicates sparse, scalp easily seen, 3 points indicates somewhat sparse, scalp visible, 4 points indicates moderate density, a small amount of scalp visible, 5 points indicates somewhat dense, very little scalp visible, 6 points indicates dense, scalp faintly visible, 7 points indicates very dense, scalp almost invisible).

2.5. Subjects' self-assessment

Subjects assessed their skin condition. Evaluation standard: 0-9 score, (0 score means "very good", 1-3 score means "relatively good", 4-5 score means "fair", 6-8 score means "relatively poor", 9 score means "very poor").

Subjects assessed the efficacy and satisfaction with the evaluation product. Evaluation standard: 1-5 score (1 score means "very poor", 2 score means "poor", 3 score means "fair", 4 score means "good", and 5 score means "very good").

3. Inclusion and Exclusion Criteria

Subjects for this test were selected from the CPCH Efficacy Laboratory subject Information database. Healthy subjects who met the following inclusion and exclusion criteria were selected.

3.1. Inclusion criteria

- Healthy male or female, aged 18–60 years;
- Race: Asian (Chinese);
- Average scalp sebum content measured by Sebumeter $\geq 80 \mu\text{g}/\text{cm}^2$;
- Hair length between 5–40 cm;

- Experiencing excessive hair shedding and mild hair thinning, with hair loss count exceeding 10 hairs using the 60-stroke combing method, and still exceeding 10 hairs after a 2-week washout period;
- Self-reported scalp itching or redness;
- No hair coloring, perming, or styling treatments within the past month;
- No significant skin lesions or scars on the scalp;
- Able to comply well with the study requirements and maintain a regular lifestyle during the study period.

3.2. Exclusion criteria

Anyone with any of the following conditions must be excluded from entering this evaluation :

- Those who do not agree to sign the informed consent form.
- Those who do not agree to sign the photo declaration.
- Those who are not willing to comply with the requirements of the protocol.
- Use of cosmetics or/and medications on the day of assessment.
- Self-reported to be pregnant, breastfeeding, or planning pregnancy in the near future.
- Individuals with severe androgenetic alopecia, alopecia areata, inflammatory scarring alopecia, or other scalp/hair disorders.
- Subjects with psychiatric or psychological disorders, or those with long-term sleep or emotional regulation issues.
- Use of cosmetics or other products with moisturizing, soothing, hair care, oil control, anti-hair loss, or hair growth effects within 3 months prior to participation.
- Use of any medication affecting hair growth (systemic or topical) within 6 months prior to participation.
- Those who have previously undergone hair transplantation treatment.
- Individuals with curly hair.
- Those who are concurrently enrolled in any other study.
- Are receiving medication during the study period that may influence the study outcomes.
- Subjects with infectious skin diseases or atopic dermatitis.
- Subjects with skin abnormalities such as nevus, telangiectasia, etc. at the assessment/test site.
- Subjects who have received a skin peel or other skin treatment within 3 months prior to participation in the assessment/test.
- Subjects who have received immunosuppressive therapy within 3 months prior to participation in the assessment/test.
- Subjects who have received systemic steroid therapy or phototherapy within 1 month prior to participation in the evaluation/test.
- The presence of lesions, visible marks or other abnormalities in the area to be assessed/tested, which make it difficult to measure.
- Subjects with severe reactions or allergies to cosmetics, drugs or general light exposure.
- When, in addition to the above, the person in charge of the evaluation deems it inappropriate to conduct the evaluation.

4.4. Skin sebum (Sebumeter® SM815) (Scalp)

Smaller measurement indicates a decreased in skin sebum.

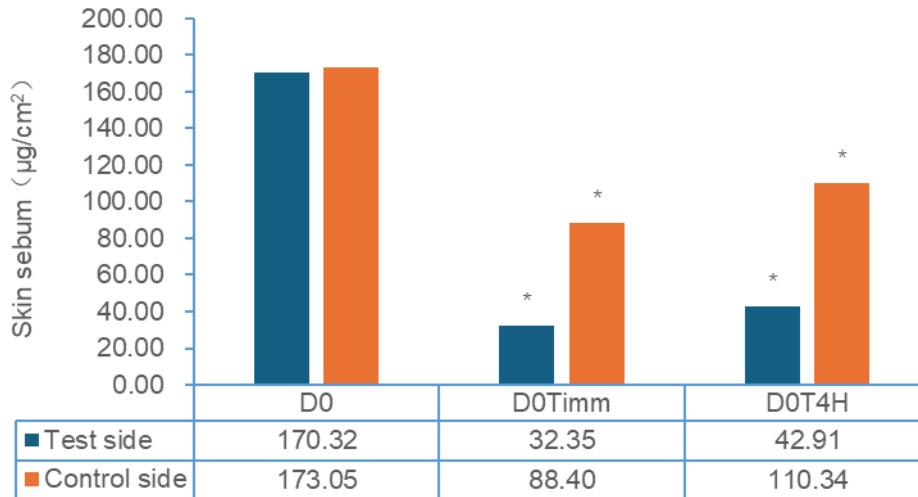

Figure 4.1 Skin sebum

Remarks: * means there's a significant difference compared with baseline ($p < 0.05$)

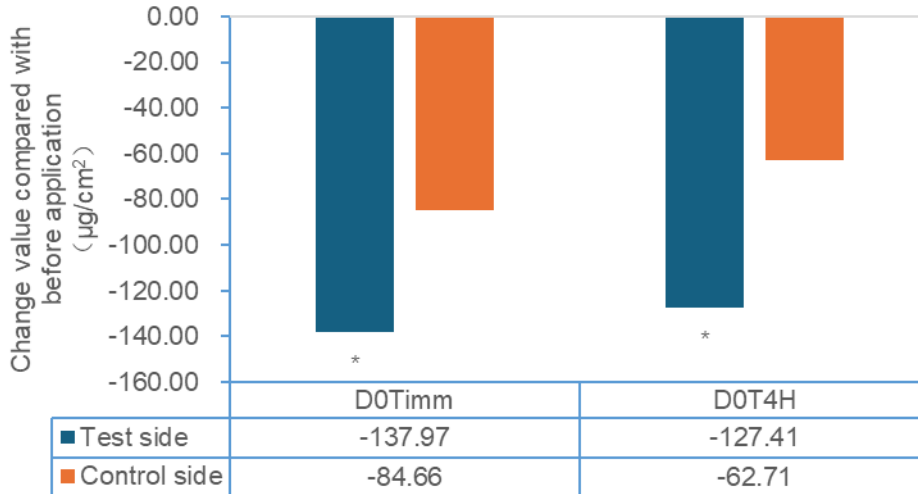

Figure 4.2 Change value of skin sebum

Remarks: * means there's a significant difference compared with control side ($p < 0.05$)

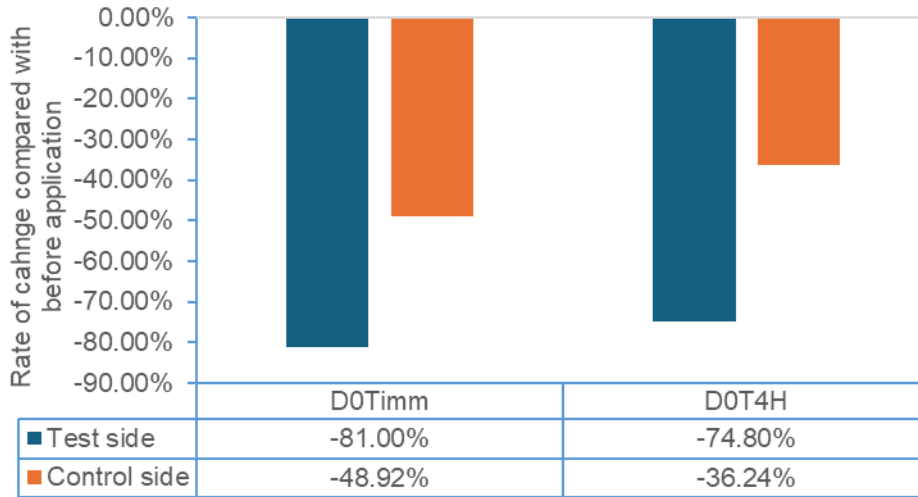

Figure 4.3 Rate of change of skin sebum

$$\text{Rate of change} = (\text{measurements after application} - \text{measurements before application}) \div \text{measurements before application} \times 100\%$$

Compared with before application:

Immediately after application, the test side skin sebum in the scalp assessment area decreased by 81.00% significantly, the control side skin sebum in the scalp assessment area decreased by 48.92% significantly.

4 hours after application, the test side skin sebum in the scalp assessment area decreased by 74.80% significantly, the control side skin sebum in the scalp assessment area decreased by 36.24% significantly.

The difference between the after application and before application, compared between the test side and the control side:

Immediately after application, the skin sebum in the scalp assessment improved significantly.

4 hours after application, the skin sebum in the scalp assessment improved significantly.

28 days after application, 100% of the subjects agreed that the scalp felt clean after use, 100% agreed that the scalp felt comfortable after use, 100% agreed that the product was gentle and non-irritating after use, 100% agreed that the product improved scalp oil secretion after use, 100% agreed that the product helped regulate the scalp's water-oil balance after use, 100% agreed that the scalp felt clean and refreshing after use, 100% agreed that the hair strands were moist and not dry after use, 100% agreed that the scalp was moisturized and not tight after use, 100% agreed that the hair strands were smooth and did not tangle after use, 100% agreed that the product improved dry and frizzy hair after use, 100% agreed that the hair had shine after use, 100% agreed that the product helped relieve scalp itching after use, 100% agreed that the product helped improve scalp redness after use, 100% agreed that the product repaired the scalp barrier after use, 100% agreed that the

hair strands felt light after use, 100% agreed that the hair felt voluminous after use, 100% agreed that they felt an increase in visual hair volume after use, 100% agreed that the hair was not flat-collapsed after use, 100% agreed that the hair became fluffy and made the face look smaller after use, 100% agreed that the product helped achieve a high-top effect after use, 100% agreed that the hair became plump and bouncy after use, 97% agreed that the product's smell was pleasant, 100% agreed that they felt an increase in hair volume after using the product, 100% agreed that more small strands of hair appeared after using the product, 100% agreed that they felt less hair loss when washing their hair after using the product, 100% agreed that the product effectively improved hair loss after use, 100% agreed that the hair felt thicker and harder after using the product, 100% agreed that the gaps between hair strands were improved after using the product, 100% agreed that their hairline was improved after using the product, 97% agreed that scalp oil secretion decreased after using the product, 100% agreed that hair split ends or frizz decreased after using the product, and 100% agreed that dandruff decreased after using the product.

56 days after application, 100% of the subjects agreed that the scalp felt clean after use, 100% agreed that the scalp felt comfortable after use, 100% agreed that the product was gentle and non-irritating after use, 100% agreed that the product improved scalp oil secretion after use, 100% agreed that the product helped regulate the scalp's water-oil balance after use, 100% agreed that the scalp felt clean and refreshing after use, 100% agreed that the hair strands were moist and not dry after use, 100% agreed that the scalp was moisturized and not tight after use, 100% agreed that the hair strands were smooth and did not tangle after use, 100% agreed that the product improved dry and frizzy hair after use, 100% agreed that the hair had shine after use, 100% agreed that the product helped relieve scalp itching after use, 100% agreed that the product helped improve scalp redness after use, 100% agreed that the product repaired the scalp barrier after use, 100% agreed that the hair strands felt light after use, 100% agreed that the hair felt voluminous after use, 100% agreed that they felt an increase in visual hair volume after use, 100% agreed that the hair was not flat-collapsed after use, 100% agreed that the hair became fluffy and made the face look smaller after use, 100% agreed that the product helped achieve a high-top effect after use, 100% agreed that the hair became plump and bouncy after use, 97% agreed that the product's smell was pleasant, 100% agreed that they felt an increase in hair volume after using the product, 100% agreed that more small strands of hair appeared after using the product, 100% agreed that they felt less hair loss when washing their hair after using the product, 100% agreed that the product effectively improved hair loss after use, 100% agreed that the hair felt thicker and harder after using the product, 100% agreed that the gaps between hair strands were improved after using the product, 100% agreed that their hairline was improved after using the product, 97% agreed that scalp oil secretion decreased after using the product, 100% agreed that hair split ends or frizz decreased after using the product, 100% agreed that dandruff decreased after using the product, 100% agreed that overall satisfaction with the product's effect/effectiveness was achieved after use, 100% agreed that they were willing to continue using this product after use, 100% agreed that they were willing to recommend the product to family and friends after use, 100% agreed that the product met the overall needs for hair care, 100% believed that the product was suitable for sensitive skin, and 100% believed that the product was mild and non-irritating.

5. Evaluation Conclusion

Compared with before application, 28 days and 56 days after application, the scores for questions related to moisturizing in the consumer usage test questionnaire were improved significantly. The evaluation results showed that the product had moisturizing efficacy under the test conditions.

Compared with before application, 28 days and 56 days after application, the scores for questions related to soothing in the consumer usage test questionnaire were improved significantly. The evaluation results showed that the product had soothing efficacy under the test conditions.

Compared with before application, 28 days and 56 days after application, the scores for questions related to hair care in the consumer usage test questionnaire were improved significantly. The evaluation results showed that the product had hair care efficacy under the test conditions.

Compared with before application, 28 days and 56 days after application, the scores for questions related to gentle (non-irritating) in the consumer usage test questionnaire were improved significantly. The evaluation results showed that the product was gentle (non-irritating) under the test conditions.

4 hours after application, the difference in skin sebum compared to before application showed a significant improvement on the test side versus the control side. The evaluation results showed that the product had oil-control efficacy under the test conditions.

Compared with before application, 28 days and 56 days after application, hair count, hair density, hair loss count, and dermatologist-assessed overall hair density were all improved significantly. The evaluation results showed that the product had an effect on improving hair density under the test conditions.

6. Dermal adverse reaction

No adverse events (AEs) were recorded during the course of the study.

7. Deviation and revision to the protocol

This test was carried out in full accordance with the test protocol.
