

Hercules PT-4 HCC Holdings, Inc. an Oatey Affiliate

Version No: **1.2**Safety Data Sheet according to OSHA HazCom Standard (2012) requirements

Issue Date: **01/27/2022**Print Date: **01/27/2022**S.GHS.USA.EN

SECTION 1 Identification

Product Identifier

| Product name | Hercules PT-4 | |
|----------------------------------|--|--|
| Synonyms | Not Available | |
| Proper shipping name | Flammable liquids, n.o.s. (contains Terpene hydrocarbons and Limonene) | |
| Other means of identification | 137501, 137503, 137504, 137507, 137509 | |

Recommended use of the chemical and restrictions on use

| Relevant identified uses | Flow improver for drainage and plumbing systems |
|--------------------------|---|

Name, address, and telephone number of the chemical manufacturer, importer, or other responsible party

| Registered company name | HCC Holdings, Inc. an Oatey Affiliate | |
|-------------------------|--|--|
| Address | 4700 West 160th Street Cleveland, OH 44135 United States | |
| Telephone | 216-267-7100 | |
| Fax | Not Available | |
| Website | Not Available | |
| Email | info@oatey.com | |

Emergency phone number

| Association / Organisation | Chemtrec | |
|--|--|--|
| Emergency telephone numbers | 1-800-424-9300 (Outside the US 1-703-527-3887) | |
| Other emergency telephone numbers Emergency First Aid: 1-877-740-5015 | | |

SECTION 2 Hazard(s) identification

Classification of the substance or mixture

| Classification | Flammable Liquids Category 3, Serious Eye Damage/Eye Irritation Category 1, Skin Corrosion/Irritation Category 2, Sensitisation |
|----------------|---|
| | (Skin) Category 1, Aspiration Hazard Category 1 |

Label elements

Version No: 1.2 Page 2 of 13 Issue Date: 01/27/2022 Print Date: 01/27/2022

| Signal | vord | Dange |
|--------|------|-------|
| Signa | voiu | 00 |

Hazard statement(s)

| Flammable liquid and vapour. | |
|---|--|
| Causes serious eye damage. | |
| Causes skin irritation. | |
| May cause an allergic skin reaction. | |
| May be fatal if swallowed and enters airways. | |

Hazard(s) not otherwise classified

Not Applicable

Precautionary statement(s) Prevention

| - | |
|---|---|
| | Keep away from heat/sparks/open flames/hot surfaces No smoking. |
| | Keep container tightly closed. |
| | Ground/bond container and receiving equipment. |
| | Use explosion-proof electrical/ventilating/lighting/intrinsically safe equipment. |
| | Use only non-sparking tools. |
| | Take precautionary measures against static discharge. |
| | Avoid breathing mist/vapours/spray. |
| | Wash all exposed external body areas thoroughly after handling. |
| | Contaminated work clothing must not be allowed out of the workplace. |
| | Wear protective gloves, protective clothing, eye protection and face protection. |

Precautionary statement(s) Response

| IF SWALLOWED: Immediately call a POISON CENTER/doctor/physician/first aider. | |
|--|--|
| Do NOT induce vomiting. | |
| IF IN EYES: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. | |
| Immediately call a POISON CENTER/doctor/physician/first aider. | |
| In case of fire: Use alcohol resistant foam or normal protein foam to extinguish. | |
| If skin irritation or rash occurs: Get medical advice/attention. | |
| IF ON SKIN: Wash with plenty of water. | |
| IF ON SKIN (or hair): Take off immediately all contaminated clothing. Rinse skin with water/shower. | |
| If skin irritation occurs: Get medical advice/attention. | |
| Take off contaminated clothing and wash it before reuse. | |
| Wash contaminated clothing before reuse. | |
| | |

Precautionary statement(s) Storage

| , | , - |
|---|--|
| | Store in a well-ventilated place. Keep cool. |
| | Store locked up. |

Precautionary statement(s) Disposal

| o with any local regulation | |
|-----------------------------|-----------------------------|
| • | e with any local regulation |

SECTION 3 Composition / information on ingredients

Substances

See section below for composition of Mixtures

 Version No: 1.2
 Page 3 of 13
 Issue Date: 01/27/2022

 Print Date: 01/27/2022
 Print Date: 01/27/2022

Hercules PT-4

Mixtures

| CAS No | %[weight] | Name |
|-------------|-----------|-----------------------------------|
| 68956-56-9* | 40-50 | Terpene hydrocarbons |
| 5989-27-5* | 5-15 | <u>Limonene</u> |
| 102-71-6* | 5-15 | Triethanolamine |
| 68584-22-5 | 5-10 | (C10-16)alkylbenzenesulfonic acid |
| 68439-46-3* | 1-5 | alcohols C9-11 ethoxylated |
| 584-08-7 | 1-5 | potassium carbonate |

The specific chemical identity and/or exact percentage (concentration) of composition has been withheld as a trade secret.

SECTION 4 First-aid measures

Description of first aid measures

| Eye Contact | If this product comes in contact with the eyes: Immediately hold eyelids apart and flush the eye continuously with running water. Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. Continue flushing until advised to stop by the Poisons Information Centre or a doctor, or for at least 15 minutes. |
|--------------|---|
| | Transport to hospital or doctor without delay. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. |
| Skin Contact | If skin or hair contact occurs: Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. |
| Inhalation | If fumes, aerosols or combustion products are inhaled remove from contaminated area. Other measures are usually unnecessary. |
| Ingestion | Do NOT induce vomiting. Drink plenty of water. Rinse mouth. Never give anything by mouth to an unconscious person. Call a physician or poison control center immediately. |

Most important symptoms and effects, both acute and delayed

See Section 11

Indication of any immediate medical attention and special treatment needed

Any material aspirated during vomiting may produce lung injury. Therefore emesis should not be induced mechanically or pharmacologically. Mechanical means should be used if it is considered necessary to evacuate the stomach contents; these include gastric lavage after endotracheal intubation. If spontaneous vomiting has occurred after ingestion, the patient should be monitored for difficult breathing, as adverse effects of aspiration into the lungs may be delayed up to 48 hours.

SECTION 5 Fire-fighting measures

Extinguishing media

- ▶ Foam.
- Dry chemical powder.
- ▶ BCF (where regulations permit).
- Carbon dioxide.
- Water spray or fog Large fires only.

Special hazards arising from the substrate or mixture

Fire Incompatibility

 Avoid contamination with oxidising agents i.e. nitrates, oxidising acids, chlorine bleaches, pool chlorine etc. as ignition may result

Special protective equipment and precautions for fire-fighters

▶ Alert Fire Department and tell them location and nature of hazard.

May be violently or explosively reactive.

Fire Fighting

Wear breathing apparatus plus protective gloves.

Provent by any means available spillage from or

▶ Prevent, by any means available, spillage from entering drains or water course.

- ▶ If safe, switch off electrical equipment until vapor fire hazard removed.
- ▶ Use water delivered as a fine spray to control fire and cool adjacent area.

Version No: 1.2 Page 4 of 13 Issue Date: 01/27/2022 Print Date: 01/27/2022

Hercules PT-4

| | Avoid spraying water onto liquid pools. DO NOT approach containers suspected to be hot. Cool fire exposed containers with water spray from a protected location. If safe to do so, remove containers from path of fire. |
|-----------------------|--|
| Fire/Explosion Hazard | Liquid and vapour are flammable. Moderate fire hazard when exposed to heat or flame. Vapour forms an explosive mixture with air. Moderate explosion hazard when exposed to heat or flame. Vapour may travel a considerable distance to source of ignition. Heating may cause expansion or decomposition leading to violent rupture of containers. On combustion, may emit toxic fumes of carbon monoxide (CO). Combustion products include: carbon dioxide (CO2) carbon monoxide (CO) sulfur oxides (SOx) metal oxides other pyrolysis products typical of burning organic material. |

SECTION 6 Accidental release measures

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

| Minor Spills | Remove all ignition sources. Clean up all spills immediately. Avoid breathing vapours and contact with skin and eyes. Control personal contact with the substance, by using protective equipment. Contain and absorb small quantities with vermiculite or other absorbent material. Wipe up. Collect residues in a flammable waste container. |
|--------------|---|
| Major Spills | Clear area of personnel and move upwind. Alert Fire Department and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves. Prevent, by any means available, spillage from entering drains or water course. Consider evacuation (or protect in place). No smoking, naked lights or ignition sources. Increase ventilation. Stop leak if safe to do so. Water spray or fog may be used to disperse /absorb vapour. Contain spill with sand, earth or vermiculite. Use only spark-free shovels and explosion proof equipment. Collect recoverable product into labelled containers for recycling. Absorb remaining product with sand, earth or vermiculite. Collect solid residues and seal in labelled drums for disposal. Wash area and prevent runoff into drains. If contamination of drains or waterways occurs, advise emergency services. |

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 Handling and storage

Precautions for safe handling

▶ Containers, even those that have been emptied, may contain explosive vapours.

- ▶ Do NOT cut, drill, grind, weld or perform similar operations on or near containers.
- ▶ Avoid all personal contact, including inhalation.
- Wear protective clothing when risk of overexposure occurs.

Safe handling

- Use in a well-ventilated area.
- Prevent concentration in hollows and sumps.
- ▶ DO NOT enter confined spaces until atmosphere has been checked.

Version No: 1.2 Page 5 of 13 Issue Date: 01/27/2022 Print Date: 01/27/2022

Hercules PT-4

Avoid smoking, naked lights or ignition sources. Avoid generation of static electricity. ▶ DO NOT use plastic buckets.

- Earth all lines and equipment.
- Use spark-free tools when handling.
- Avoid contact with incompatible materials.
- ▶ When handling, **DO NOT** eat, drink or smoke.
- ▶ Keep containers securely sealed when not in use.
- Avoid physical damage to containers.
- Always wash hands with soap and water after handling.
- Work clothes should be laundered separately.
- Use good occupational work practice.
- Observe manufacturer's storage and handling recommendations contained within this SDS.
- Atmosphere should be regularly checked against established exposure standards to ensure safe working conditions.

▶ Store in original containers in approved flammable liquid storage area.

- ▶ Store away from incompatible materials in a cool, dry, well-ventilated area.
- ► DO NOT store in pits, depressions, basements or areas where vaporsmay be trapped.
- ▶ No smoking, naked lights, heat or ignition sources.
- Storage areas should be clearly identified, well illuminated, clear of obstruction and accessible only to trained and authorized personnel - adequate security must be provided so that unauthorized personnel do not have access.
- Store according to applicable regulations for flammable materials for storage tanks, containers, piping, buildings, rooms, cabinets, allowable quantities and minimum storage distances.
- Use non-sparking ventilation systems, approved explosion proof equipment and intrinsically safe electrical systems.

▶ Have appropriate extinguishing capability in storage area (e.g. portable fire extinguishers - dry chemical, foam or carbon dioxide) and flammable gas detectors.

- Keep adsorbents for leaks and spills readily available.
- Protect containers against physical damage and check regularly for leaks.
- Observe manufacturer's storage and handling recommendations contained within this SDS.

In addition, for tank storages (where appropriate):

- Store in grounded, properly designed and approved vessels and away from incompatible materials.
- For bulk storages, consider use of floating roof or nitrogen blanketed vessels; where venting to atmosphere is possible, equip storage tank vents with flame arrestors; inspect tank vents during winter conditions for vapor/ ice build-up.
- ▶ Storage tanks should be above ground and diked to hold entire contents.

Conditions for safe storage, including any incompatibilities

Packing as supplied by manufacturer. ▶ Plastic containers may only be used if approved for flammable liquid. Suitable container ▶ Check that containers are clearly labelled and free from leaks. PReacts with mild steel, galvanised steel / zinc producing hydrogen gas which may form an explosive mixture with air. Storage incompatibility Avoid strong bases. Avoid reaction with oxidising agents

SECTION 8 Exposure controls / personal protection

Control parameters

Occupational Exposure Limits (OEL)

Other information

INGREDIENT DATA

| Source | Ingredient | Material name | TWA | STEL | Peak | Notes |
|--|-----------------|-----------------|---------|---------------|---------------|---------------|
| US ACGIH Threshold Limit Values (TLV) | Triethanolamine | Triethanolamine | 5 mg/m3 | Not Available | Not Available | Not Available |

Exposure controls

Appropriate engineering

controls

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

The basic types of engineering controls are:

Process controls which involve changing the way a job activity or process is done to reduce the risk.

Enclosure and/or isolation of emission source which keeps a selected hazard 'physically' away from the worker and ventilation that strategically 'adds' and 'removes' air in the work environment. Ventilation can remove or dilute an air contaminant if designed properly. The design of a ventilation system must match the particular process and chemical or contaminant in use. Employers may need to use multiple types of controls to prevent employee overexposure.

For flammable liquids and flammable gases, local exhaust ventilation or a process enclosure ventilation system may be required.

Continued...

Version No: **1.2** Page **6** of **13** Issue Date: **01/27/2022**

Hercules PT-4

Print Date: 01/27/2022

Ventilation equipment should be explosion-resistant.

Air contaminants generated in the workplace possess varying 'escape' velocities which, in turn, determine the 'capture velocities' of fresh circulating air required to effectively remove the contaminant.

| Type of Contaminant: | Air Speed: |
|---|------------------------------------|
| solvent, vapours, degreasing etc., evaporating from tank (in still air). | 0.25-0.5 m/s (50-100 f/min.) |
| aerosols, fumes from pouring operations, intermittent container filling, low speed conveyer transfers, welding, spray drift, plating acid fumes, pickling (released at low velocity into zone of active generation) | 0.5-1 m/s (100-200 f/min.) |
| direct spray, spray painting in shallow booths, drum filling, conveyer loading, crusher dusts, gas discharge (active generation into zone of rapid air motion) | 1-2.5 m/s (200-500 f/min.) |

Within each range the appropriate value depends on:

| Lower end of the range | Upper end of the range |
|--|----------------------------------|
| 1: Room air currents minimal or favourable to capture | 1: Disturbing room air currents |
| 2: Contaminants of low toxicity or of nuisance value only. | 2: Contaminants of high toxicity |
| 3: Intermittent, low production. | 3: High production, heavy use |
| 4: Large hood or large air mass in motion | 4: Small hood-local control only |

Simple theory shows that air velocity falls rapidly with distance away from the opening of a simple extraction pipe. Velocity generally decreases with the square of distance from the extraction point (in simple cases). Therefore the air speed at the extraction point should be adjusted, accordingly, after reference to distance from the contaminating source. The air velocity at the extraction fan, for example, should be a minimum of 1-2 m/s (200-400 f/min.) for extraction of solvents generated in a tank 2 meters distant from the extraction point. Other mechanical considerations, producing performance deficits within the extraction apparatus, make it essential that theoretical air velocities are multiplied by factors of 10 or more when extraction systems are installed or used.

Personal protection

Eye and face protection

- ▶ Safety glasses with side shields.
- Chemical goggles.
- Contact lenses may pose a special hazard; soft contact lenses may absorb and concentrate irritants. A written policy document, describing the wearing of lenses or restrictions on use, should be created for each workplace or task. This should include a review of lens absorption and adsorption for the class of chemicals in use and an account of injury experience. Medical and first-aid personnel should be trained in their removal and suitable equipment should be readily available. In the event of chemical exposure, begin eye irrigation immediately and remove contact lens as soon as practicable. Lens should be removed at the first signs of eye redness or irritation lens should be removed in a clean environment only after workers have washed hands thoroughly. [CDC NIOSH Current Intelligence Bulletin 59], [AS/NZS 1336 or national equivalent]

Skin protection

See Hand protection below

Hands/feet protection

- ▶ Wear chemical protective gloves, e.g. PVC.
- Wear safety footwear or safety gumboots, e.g. Rubber

Body protection

Other protection

See Other protection below

- ► Overalls.
- PVC Apron.
- ▶ PVC protective suit may be required if exposure severe.
- ► Eyewash unit.
- Ensure there is ready access to a safety shower.
- Some plastic personal protective equipment (PPE) (e.g. gloves, aprons, overshoes) are not recommended as they may produce static electricity.
- For large scale or continuous use wear tight-weave non-static clothing (no metallic fasteners, cuffs or pockets).
- Non sparking safety or conductive footwear should be considered. Conductive footwear describes a boot or shoe with a sole made from a conductive compound chemically bound to the bottom components, for permanent control to electrically ground the foot an shall dissipate static electricity from the body to reduce the possibility of ignition of volatile compounds. Electrical resistance must range between 0 to 500,000 ohms. Conductive shoes should be stored in lockers close to the room in which they are worn. Personnel who have been issued conductive footwear should not wear them from their place of work to their homes and return.

Respiratory protection

SECTION 9 Physical and chemical properties

Information on basic physical and chemical properties

| Appearance | Off-White Translucent Liquid | | |
|--|------------------------------|---|---------------|
| Physical state | Liquid | Relative density (Water = 1) | 0.95 |
| Odour | Citrus | Partition coefficient n-octanol / water | Not Available |
| Odour threshold | Not Available | Auto-ignition temperature (°C) | Not Available |
| pH (as supplied) | 8 | Decomposition temperature | Not Available |
| Melting point / freezing point (°C) | Not Available | Viscosity (cps) | 20-40 |
| Initial boiling point and boiling range (°C) | 104 | Molecular weight (g/mol) | Not Available |
| Flash point (°C) | 45 | Taste | Not Available |
| Evaporation rate | Not Available | Explosive properties | Not Available |
| Flammability | Flammable. | Oxidising properties | Not Available |
| Upper Explosive Limit (%) | Not Available | Surface Tension (dyn/cm or mN/m) | Not Available |
| Lower Explosive Limit (%) | Not Available | Volatile Component (%vol) | Not Available |
| Vapour pressure (kPa) | Not Available | Gas group | Not Available |
| Solubility in water | Miscible | pH as a solution (Not Available%) | Not Available |
| Vapour density (Air = 1) | Not Available | VOC g/L | 500 |

SECTION 10 Stability and reactivity

| Reactivity | See section 7 |
|------------------------------------|--|
| Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| Possibility of hazardous reactions | See section 7 |
| Conditions to avoid | See section 7 |
| Incompatible materials | See section 7 |
| Hazardous decomposition products | See section 5 |

SECTION 11 Toxicological information

Information on toxicological effects

| Inhaled | The material is not thought to produce adverse health effects or irritation of the respiratory tract. Nevertheless, good hygiene practice requires that exposure be kept to a minimum and that suitable control measures be used in an occupational setting. |
|--------------|---|
| Ingestion | Swallowing of the liquid may cause aspiration into the lungs with the risk of chemical pneumonitis; serious consequences may result. (ICSC13733) The material has NOT been classified as 'harmful by ingestion'. This is because of the lack of corroborating animal or human evidence. |
| Skin Contact | Causes skin irritation. Open cuts, abraded or irritated skin should not be exposed to this material |

 Version No: 1.2

| | Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. |
|---------|--|
| Eye | If applied to the eyes, this material causes severe eye damage. |
| Chronic | May cause an allergic skin reaction. Dermatitis. Rash. Aspiration may cause pulmonary edema and pneumonitis. |

Very toxic to aquatic organisms, may cause long-term adverse effects in the aquatic environment.

Do NOT allow product to come in contact with surface waters or to intertidal areas below the mean high water mark. Do not contaminate water when cleaning equipment or disposing of equipment wash-waters.

Wastes resulting from use of the product must be disposed of on site or at approved waste sites.

DO NOT discharge into sewer or waterways.

| Limonene | LOW (KOC = 1324) | |
| Triethanolamine | LOW (KOC = 10) | |

SECTION 13 Disposal considerations

disposal

Waste treatment methods

- ▶ Containers may still present a chemical hazard/ danger when empty.
- ▶ Return to supplier for reuse/ recycling if possible.

Otherwise:

• If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.

- - Recycle wherever possible.
 - Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.
 - Dispose of by: burial in a land-fill specifically licensed to accept chemical and / or pharmaceutical wastes or Incineration in a licensed apparatus (after admixture with suitable combustible material).
 - Decontaminate empty containers. Observe all label safeguards until containers are cleaned and destroyed.

Hercules PT-4

| Product name | Ship Type |
|-----------------------------------|---------------|
| Terpene hydrocarbons | Not Available |
| Limonene | Not Available |
| Triethanolamine | Not Available |
| (C10-16)alkylbenzenesulfonic acid | Not Available |
| alcohols C9-11 ethoxylated | Not Available |
| potassium carbonate | Not Available |

SECTION 15 Regulatory information

Safety, health and environmental regulations / legislation specific for the substance or mixture

Terpene hydrocarbons is found on the following regulatory lists

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

US TSCA Chemical Substance Inventory - Interim List of Active Substances

Limonene is found on the following regulatory lists

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs

US AIHA Workplace Environmental Exposure Levels (WEELs)

US DOE Temporary Emergency Exposure Limits (TEELs)

US EPA Integrated Risk Information System (IRIS)

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory US TSCA Chemical Substance Inventory - Interim List of Active Substances

Triethanolamine is found on the following regulatory lists

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC Monographs

US - Massachusetts - Right To Know Listed Chemicals

US ACGIH Threshold Limit Values (TLV)

US Department of Homeland Security (DHS) - Chemical Facility Anti-Terrorism Standards (CFATS) - Chemicals of Interest

US DOE Temporary Emergency Exposure Limits (TEELs)

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory US TSCA Chemical Substance Inventory - Interim List of Active Substances

(C10-16)alkylbenzenesulfonic acid is found on the following regulatory lists

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

US TSCA Chemical Substance Inventory - Interim List of Active Substances

alcohols C9-11 ethoxylated is found on the following regulatory lists

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

US TSCA Chemical Substance Inventory - Interim List of Active Substances

potassium carbonate is found on the following regulatory lists

US DOE Temporary Emergency Exposure Limits (TEELs)

US Toxic Substances Control Act (TSCA) - Chemical Substance Inventory

US TSCA Chemical Substance Inventory - Interim List of Active Substances

Federal Regulations

Superfund Amendments and Reauthorization Act of 1986 (SARA)

Section 311/312 hazard categories

| Section 311/312 nazaru Categories | |
|---|-----|
| Flammable (Gases, Aerosols, Liquids, or Solids) | Yes |
| Gas under pressure | No |
| Explosive | No |
| Self-heating | No |
| Pyrophoric (Liquid or Solid) | No |
| Pyrophoric Gas | No |
| Corrosive to metal | No |
| Oxidizer (Liquid, Solid or Gas) | No |
| Organic Peroxide | No |
| Self-reactive | No |
| In contact with water emits flammable gas | No |
| Combustible Dust | No |
| Carcinogenicity | No |

 Version No: 1.2

Hercules PT-4

| Acute toxicity (any route of exposure) | No |
|--|-----|
| Reproductive toxicity | No |
| Skin Corrosion or Irritation | Yes |
| Respiratory or Skin Sensitization | Yes |
| Serious eye damage or eye irritation | |
| Specific target organ toxicity (single or repeated exposure) | |
| Aspiration Hazard | |
| Germ cell mutagenicity | |
| Simple Asphyxiant | |
| Hazards Not Otherwise Classified | |

US. EPA CERCLA Hazardous Substances and Reportable Quantities (40 CFR 302.4)

None Reported

State Regulations

US. California Proposition 65

WARNING: This product can expose you to chemicals including sulfur dioxide, which is known to the State of California to cause birth defects or otherreproductive harm. For more information, go to www.P65Warnings.ca.gov.

National Inventory Status

| National Inventory | Status |
|--------------------|--|
| USA - TSCA | Yes |
| Legend: | Yes = All CAS declared ingredients are on the inventory No = One or more of the CAS listed ingredients are not on the inventory. These ingredients may be exempt or will require registration. |

SECTION 16 Other information

| Revision Date | 01/27/2022 |
|---------------|------------|
| Initial Date | 01/25/2022 |

Other information

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

Definitions and abbreviations

PC-TWA: Permissible Concentration-Time Weighted Average

PC-STEL: Permissible Concentration-Short Term Exposure Limit

IARC: International Agency for Research on Cancer

ACGIH: American Conference of Governmental Industrial Hygienists

STEL: Short Term Exposure Limit

TEEL: Temporary Emergency Exposure Limit。

IDLH: Immediately Dangerous to Life or Health Concentrations

ES: Exposure Standard
OSF: Odour Safety Factor

NOAEL :No Observed Adverse Effect Level
LOAEL: Lowest Observed Adverse Effect Level

TLV: Threshold Limit Value LOD: Limit Of Detection OTV: Odour Threshold Value BCF: BioConcentration Factors BEI: Biological Exposure Index

AIIC: Australian Inventory of Industrial Chemicals

DSL: Domestic Substances List
NDSL: Non-Domestic Substances List

IECSC: Inventory of Existing Chemical Substance in China

EINECS: European INventory of Existing Commercial chemical Substances

ELINCS: European List of Notified Chemical Substances

NLP: No-Longer Polymers

 Version No: 1.2
