

The New PRO Series®

More power & performance
than ever before.

InSinkErator® is delivering an exciting new line of disposers developed exclusively for professionals – the **PRO Series**. These new disposers feature **Evolution®** **SoundSeal®** and **MultiGrind®** technologies and are equipped with more power and longer warranties than previous PRO Series models to provide professionals a distinct advantage – exactly what customers expect from a PRO.

GRIND MORE.

Innovative technologies make the PRO Series® disposers more advanced than anything on the market today. Which means that you can grind foods finer, without clogs or jams. Foods that you used to throw in the trash can now be put in the disposer.

3X GRIND

A **three-stage technology** that allows you to grind almost any food waste. It also includes a Jam-Sensor® Circuit that virtually eliminates jams.

- celery
- potato peels
- corn cobs
- rib bones

2X GRIND

This **two-stage technology** quickly grinds food waste significantly better than any previous disposer.

- celery
- potato peels

MultiGrind® Technology

GrindShear Ring®

Grinds food in two stages. First, food waste material is ground into small particles along the surface of the ring. Second, the particles are forced through a series of pass-through windows and sheared into even finer waste. The ideal solution for stringy foods like cornhusks and celery.

Tri-Action Lug® System*

Swivel lugs work with the GrindShear Ring® to perform the first and second stages of grind. Fixed lugs grind particles finer than swivel lugs alone. And the system's lug configuration propels water throughout the grind chamber, helping to rinse it clean.

Undercutter Disk®*

Located along the leading edge of the shredder plate, the undercutter mechanism performs the third stage of grind. It cuts particles one more time after they've passed through the GrindShear Ring® to help eliminate clogs.

Jam-Sensor® Circuit*

Senses when a jam is imminent and automatically engages, increasing the rotational torque of the motor up to 500% while simultaneously pulsing at a rate of 60 times per second. Breaks through the toughest food jams automatically.

*On PRO 1100XL™ and PRO 1000LP™ models only
