

Viega PureFlow® Polymer Fittings

Reduce risk and increase efficiency

viega.us

PureFlow is a solution you can trust

Viega is always on the forefront of innovation. The first press system for the PEX market, Viega PureFlow polymer fittings improve consistency and reduce installation errors with factory-attached sleeves. Viega PureFlow fittings are made with Radel®R, a high-performance polymer, and is available from 3/8" to 2" sizes. PureFlow is ideal for residential and commercial applications ranging from potable water to hydronics. Press connections are made in seconds using Viega's system-matched tools, which color-codes the connection sizes.

With press technology, installers can make secure, reliable connections in nearly any climate and can pressure test immediately. Made in the U.S., Viega PureFlow polymer fittings are equipped with Smart Connect® technology, helping installers to easily identify unpressed connections. Accomplish more on the job with a fitting system that provides 40% less pressure drop compared to standard crimp fittings.

Testimonies of Astonishment

"My crew can install all kinds of PEX, but the Viega PureFlow System is by far the easiest."

- Dan Metcalfe, Owner Taps Plumbing

"We used to use an expandable PEX system, but it's tough to install in the winter - when you try to expand plastic when it's cold, it doesn't want to do it. I started looking at the Viega PureFlow System and realized it would solve a lot of the problems we have been having."

- James Music, General Manager Anytime Mechanical

"We started having failures in the original buildings - the cold expansion fittings were actually breaking in the wall. We started using Viega PureFlow Press Fittings and since then, it's been our standard. I believe we're getting a higher quality piping network for our buildings. We wanted to move to a spec and a standard that will ensure our buildings are 100-year buildings. That's what brought us to Viega."

- Darrell Dixon, Construction Manager for Shannex

Features and benefits

- Viega Smart Connect technology helps identify unpressed fittings for more confidence in quality connections
- Factory assembled fittings with attached stainless steel sleeves reduce installation errors
- Copper to PEX transition fittings use the same tool platform, making multimaterial installations easier
- Applicable for use in Viega ProRadiant systems
- 25-year limited warranty
- Vertically integrated manufacturing process ensures quality
- Ability to pressure test immediately with no time required for drying, curing or contracting
- No tubing alterations necessary during installation, eliminating the risk of microtears that can occur with cold expansion
- Flexibility of tubing eases installation
