# Series LF223, LF223S

# High Capacity Water Pressure Reducing Valves\*\*

# Sizes: 1/2" - 21/2"

Series LF223 and LF223S High Capacity Water Pressure Reducing Valves are designed to reduce incoming water pressure to a sensible level to protect plumbing system components and reduce water consumption. The LF223/LF223S features Lead Free\* construction to comply with Lead Free\* installation requirements. This series is suitable for water supply pressures up to 300psi (20.7 bar) and may be adjusted from 25 – 75psi (172 – 517 kPa). The standard setting is 50psi (345 kPa). Series LF223 features an enlarged diaphragm, spring cage and seat orifice for high capacity performance. Series LF223S has the same options as the LF223, except it is furnished with a strainer. All parts are quickly and easily serviceable without removing the valve from the line. The optional bypass feature permits the flow of water back through the valve into the main when pressures, due to thermal expansion on the outlet side of the valve, exceed the pressure in the main supply.

#### Features

- Enlarged diaphragm, spring cage and seat orifice for super capacity performance
- $\bullet$  Lead Free\* cast copper silicon alloy body construction (except  $2^{1\!/_2}$  " which is iron)
- Serviceable in line
- Series LF223S furnished with separate strainer
- Optional bypass feature controls thermal expansion pressure\*\*\*
- Sealed spring cage on all models for accessible outdoor or pit installations.

# Models

LF223 NPT threaded female inlet x NPT threaded female outlet LF223-S NPT threaded female inlet with strainer x NPT threaded female outlet

For 2<sup>1</sup>/<sub>2</sub>" – 3" bronze threaded valves, refer to literature ES-LFN223B. For 3" flanged connections, refer to literature ES-LFN223F.

\*The wetted surface of this product contacted by consumable water contains less than 0.25% of lead by weight.

\*\*A water saving test program concluded that reducing the supply pressure from 80-50psi (551-345 kPa) resulted in a water savings of 30%.

\*\*\* The bypass feature will not prevent the pressure relief valve from opening on the hot water supply system with pressure above 150psi (10.3 bar).

### NOTICE

The information contained herein is not intended to replace the full product installation and safety information available or the experience of a trained product installer. You are required to thoroughly read all installation instructions and product safety information before beginning the installation of this product.

Lead Free\* cast copper silicon alloy body construction 1/2" – 2"

Replaceable

stainless seat

Disc holder removable for replacement of disc without dismantling the valve no special tools required.

# Specifications

A Lead Free Water Pressure Reducing Valve shall be installed on the water service pipe near its entrance to the building where supply main pressure exceeds 60psi (413 kPa) to reduce it to 50psi (345 kPa) or lower. The water pressure reducing valve shall be constructed using Lead Free\* materials. Lead Free\* regulators shall comply with state codes and standards, where applicable, requiring reduced lead content. Sill cocks and outside wall hydrants may be left on full main pressure at the option of the owner. Provision shall be made to permit the bypass flow of water back through the valve into the main when pressures, due to thermal expansion on the outlet side of the valve, exceed the pressure in the main supply. Pressure reducing valves with builtin bypass check valves and strainer will be acceptable. Approved valves shall comply with ASSE 1003. Valve shall be a Watts Series LF223 or LF223S (with strainer).

#### NOTICE

Inquire with governing authorities for local installation requirements
