A Division of WCM Industries, Inc.

- The Woodford MB224 Series are water supply boxes with an integral water supply stop that allows for servicing of the valve at the hydrant without shutting off the water supply.
- Designed for mild climate areas, the boxed hydrants are intended for use in interior or exterior applications where freezing temperatures do not occur.
- The Modular Box system is designed to securely contain the MB224 Series wall faucet in mild climate area commercial buildings.
- Stub-out the light weight, high impact, composite box from a frame or masonry wall.
- After the wall is finished, screw the heavy 14 gauge stainless steel door and fascia assembly into the box to create a durable, secure access and an attractive front.
- *MB224 Series faucets are intended for irrigation purposes in mild climate areas.*
