

BIG DIPPER

Short wheelbase for a maximum of maneuvers.

A UNIQUE EXPERIENCE FOR THE WHOLE FAMILY.

HIGHLIGHT

The BigDipper combines powerful airtime moments with dynamic inversions, all packed into a compact layout made possible by its innovative four-across ride vehicles..

Passion for motion. Board our state-of-the-art cars and take a seat in the most comfortable roller coaster seats ever! This layout combines airtime effects with crazy inversions and a lot of direction transitions. From the twisted first drop the track leads to a bunny hop and an overbanked horseshoe element.

Twist and fly. A Big Dipper layout typically begins with a chain-lift hill leading into our signature “twisted dive drop” followed by airtime-rich hills. The outer wing seats intensify the sensation, delivering strong pops of airtime on every hill.

Fast. Faster. Big Dipper. While the two outer seats of each row are next to the track the riders not only have a floorless feeling but also sit a little higher, resulting in different forces than that of the middle seats. The compact car enables us to build a track that features extremely fast transitions, twists, and turns.
