

# POWERSPLASH

WATER RIDES

Crazy heights, powerful splashes.

# A POWERFUL BOOST FOR YOUR RIDE!

**Combining water fun with a boost of launch coaster technology** After the passengers board the boat the turntable switch will rotate it so that it is placed on the main ride track. With the LSM system the boat is then accelerated backwards until it reaches the vertical track where it slows down and is sent back forward by gravity. While traveling over the channel the water level is lowered so that the boat won't be slowed down. In the forward movement the boat again is accelerated by the stators and then travels again 90 degrees up in the air. While reaching the highest point the passengers will feel an extended airtime until they reach the final backward acceleration. With about 100 km/h the boat then is pushed to its highest point of 40 meters during the ride time.

## HIGHLIGHT

The first water ride with LSM launching technology.

It's now that the weirs at the channel will open. Water flows into the channel and the boat creates a huge splash as it slows down and is positioned to be transferred to the station. With several seconds of airtime on the hump and on both ends of the vertical track the PowerSplash will create many cheers.

## TOP FEATURES

HEIGHT RESTRICTION:  
120 CM/48"/6 YEARS

SMALL FOOTPRINT

HUGE HEIGHTS

EXTENDED AIRTIME

GREAT VISUALS

LAUNCHED WATER RIDE

20-SEATER BOATS

LAP BAR ONLY (CLASS 5)

2 X BACKWARD LAUNCHES,  
1 X FORWARD LAUNCH

## THRILL CATEGORY

Family

Xtreme
