## **UR5587 Polyurethane Resin**

UR5587 is a flexible, black, high performance encapsulation system designed to protect electrical and electronic units. The properties of UR5587 make it ideal for the protection of delicate units subject to shock and vibration.

- Low water absorption; good protection in a range of environments
- Soft resin; ideal for protecting against shock and vibration
- Low penetrating viscosity; ideal for encapsulating complex geometries
- Excellent low temperature flexibility; ideal for units with delicate components

RoHS Compliant (2015/863/EU): Yes **Approvals UL Approval:** No

#### **Typical Properties**

Liquid Properties: Polyurethane **Base Material** 

> Density Part A - Resin (g/ml) Density Part B - Hardener (g/ml) 1.22 Part A Viscosity (mPa s @ 23°C) 1300 Part B Viscosity (mPa s @ 23°C) 150 Mixed System Viscosity (mPa s @ 23°C) 1200 Mix Ratio (Weight) 6.14:1 Mix Ratio (Volume) 7.56:1 Usable Life (20°C) 15 mins Gel Time (23°C) 30 mins Cure Time (23°C) 48 hours Colour Part A - Resin Black Colour Part B - Hardener **Brown**

Storage Conditions Dry Conditions: Above 15°C, Below 30°C

1.00

Shelf Life 12 months Exotherm < 35°C (Measured on 100ml sample in a cylinder of diameter 49.4mm @ 23°C)

Cured System:	Cured Density (g/ml) Temperature Range (°C)	1.05 -50 to +100
	Max Temperature Range (Short Term (°C)/30 mins) (Application and Geometry Dependent)	+110
	Dielectric Strength (kV/mm)	16
	Volume Resistivity (ohm-cm)	10 <sup>14</sup>
	Shore Hardness @ 25°C	A45
	Colour (Mixed System)	Black
	Flame Retardancy	No
	Loss Tangent @ 50 Hz	0.02
	Permittivity @ 50 Hz	3.50

### **Mixing Procedures**

#### **Resin Packs**

When in Resin pack form, the resin and hardener are mixed by removing the clip and moving the contents around inside the pack until thoroughly mixed. To remove the clip, remove both end caps, grip each end of the pack and pull apart gently. By using the removed clip, take special care to push unmixed material from the corners of the pack. Mixing normally takes from three to four minutes depending on the skill of the operator and the size of the pack. Both the resin and hardener are evacuated prior to packing so the system is ready for use immediately after mixing. The corner may be cut from the pack so that it may be used as a simple dispenser. There is also a YouTube video (Polyurethane Mixing Instructions) available on the Electrolube channel to show the mixing process.

#### **Bulk Mixing**

When mixing, care must be taken to avoid the introduction of excessive amounts of air. Automatic mixing equipment is available which will not only mix both the resin and hardener accurately in the correct ratio but do this without introducing air. Containers of Part A (Resin) and Part B (Hardener) should be kept sealed at all

times when not in use to prevent the ingress of moisture. Bulk material must be thoroughly mixed before use. Incomplete mixing or use of the wrong mix ratio will result in erratic or partial curing.

### **Additional Information**

Cleaning: It is far easier for machines & containers to be cleaned before the resin has been allowed

to cure. Electrolube's RRS is suitable for cleaning machines and containers and cured

resin may be slowly softened and removed by soaking in our RRS.

**Curing:** Do not heat cure large volumes immediately. Allow these to gel at room temperature and

post-cure at high temperature if required (refer to liquid properties for details). Small

volumes (250ml) may be heat cured immediately.

Storage: When storing under very cold conditions, the hardener may crystallise. If this occurs,

simply warm (40°C) the container gently until all crystals have re-melted.

Health & Safety: Always refer to the Health & Safety data sheet before use. These can be downloaded

from www.electrolube.com
