Function	:	Intern
Location	:	Geneva

JOB DESCRIPTION

Presentation

Unigestion is a boutique asset manager with the scale to deliver global tailor-made investment solutions for thoughtful investors. Our core values – integrity, independence, excellence and guidance – are at the heart of everything we do. We are responsible for managing some US\$ 22.3 bn in client assets across our four areas of expertise: equity, multi asset investing, private equity and alternatives. We believe that risk management is an enduring driver of long-term investment performance, and we therefore apply a risk lens to all our strategies.

Job Description

Objectives

Nowadays, the amount of data grows exponentially, and the more information we have, the harder it gets to process it. Data visualization, such as grids, charts and dashboard preferably interactive becomes a key element of quantitative finance. Portfolio managers can save time and effort to view, analyze, and understand data, and make the right, informed decisions based on that. This is why we are looking for an intern or junior UX enthusiast for a 6 months mission with the objective to bring our data to life.

Key Responsibilities

- Design, implement and test new end-user functionalities and data visualisation interfaces
- Connect the application to backend services and databases
- Work and interact with portfolio management and quantitative development team

Project description

The project consists of developing web-based front end graphical user interfaces for a portfolio management system. It is divided into 2 parts:

- Define the general layout and stylesheets in accordance with our corporate identity
- Design interactive visualization tools on large set of data

Required Profile

- Degree in computer sciences or equivalent
- Genuine interest for finance is essential but no prior experience in finance is required
- Demonstrable experience in designing and developing UIs
- Knowledge of some of the following languages / framework
 - Modern web frameworks such as Bootstrap, React or Angular
 - HTML5, CSS3, JQuery(AJAX)
 - .Net framework (C#, WPF, ASP)
 - Database programming (TSQL)
 - Quantitative languages Python, Matlab or R

Languages

Fluency in English and French, German is a plus.

Personality

- Self-starter and team player with focus on quality and delivery
- Able to work in a team and independently
- Produce precise, organised and accurate work
- Highly motivated and enjoy challenges
- Excellent interpersonal and communication skills
- Strong sense of values and ethics

Appointment Date

Immediately, or as convenient.
