

Clockwise and
anti-clockwise rotation

ABOUT

The In-line Swivel can be easily added to the end of your Cable Rods to accept any twists or turns in the cable during installation. This is especially important when working with data cable, as twists can damage the cable's performance.

The In-line Swivel can also be used to join two Super Grips together; this is useful when replacing old cable with new.

APPLICATION

- Swivels for awkward installations
- Easily replace old cable with new
- FREE with every Super Grip multi-pack
