

Intelligent Tunable White LED Driver (Constant Current)

- Housing made from SAMSUNG/COVESTRO's V0 flame retardant PC materials.

 • Ultra small, thin and lightweight, screwless end cap.
- Change the dimming interface, output current, DALI address and other parameters on the NFC programmer or via the App, and sync the parameters to the driver.
- Set the DALI group, scene in the advanced DALI template.
- Set the output current down to 1mA.
- DALI bus standard IEC62386-101, 102, 209.
- Class 2 LED driver, Safety Extra Low Voltage (SELV).
- Soft-on and fade-in dimming function enhances your visual comfort.
- T-PWM™ dimming technology allows quality and high-end lighting.
- The whole dimming process is flicker-free with high frequency exemption level.
- $\bullet\,$ Comply with the EU's ErP Directive, networked standby<0.5W.
- $\bullet\,$ Multiple current levels, wide voltage range, suitable for LEDs with different power
- When there is no load, the output will be 0V to prevent damage to LEDs due to poor contact.
- Overheat, over voltage, overload, short circuit protection and automatic recovery.
- Suitable for Class | / || / || indoor light fixtures.
- Normal service life can reach 100,000 hours.
- 5-year warranty (Rubycon capacitor).

Technical Specs

Model		SF-An-1	300-1050-W2D		SE-30-200-800-W2D	
Fiodet	Output Type					
	Dimming Interface	Constant current				
Features	Output Feature	DALI DT6/DT8 Isolation				
reatules	Protection Grade	IP20	I			
	Insulation Grade		(Suitable for class I/ II /I	II light fixtures		
				ii tigiit tixtures)		
OUTPUT	Output Voltage	9-42Vdc				
	Maximum output voltage	≤55Vdc			T	
	Output Current Range	300-1050mA 200-800mA				
	Output Power Range	2.7W-40W 1.8W-30W				
	Dimming Range	0~100%, down to 0.01%				
	LF Current Ripple	<3%[Maximum current for non dimming state]				
	Current Accuracy	±5%				
	PWM Frequency	≼3600Hz				
	DC Voltage Range	120-300Vdc				
	AC Voltage Range	100-240Vac				
	Input Voltage	115Vac/230Vac				
	Frequency	50/60Hz				
	Input Current	≤0.45A/	115Vac, ≤0.22A/230Vac		<0.34A/115Vac, <0.17A/230Vac	
	Power Factor	PF>0.95	i/115Vac (at full load), P	PF>0.9C/230Vac (at full load)		
INPUT	THD	THD≤10	1%/230Vac, at full load			
	Efficiency (Typ.)	88%			87%	
	Inrush Current	Cold sta	art 25A(Test twidth=130u	us tested under 50% lpeak)/230Vac		
	Anti Surge	L-N: 2K	V			
	Leakage Current	Max. 0.	5mA			
	Working Temperature	ta: -20	~ 45°C tc: 90°C			
	Working Humidity	20 ~ 95	%RH, non-condensing			
NVIRONMENT	Storage Temperature/Humidity		0°C/10~95%RH			
	Temperature Coefficient	±0.03%/°C[0-50°C]				
	Vibration	±0.03%/°C(0-50°C) 10~500Hz, 2G 12min/1cycle, 72 min for X, Y and Z axes respectively				
	Overload Protection	Automatically protect the device when the load exceeds 102% of the rated power. Automatically recover once load is reduced				
	Overheat Protection	Intelligently adjust or turn off the current output if the PCB temperature >110°C. When the PCB temperature <90°C, automatically recover normal output				
PROTECTION	Overvoltage Protection	Automatically protect the device when voltage exceeds the no-load voltage. It can be recovered automatically				
	Short Circuit Protection	Enter hiccup mode if short circuit occurs, and recover automatically				
	Withstand Voltage	I/P-0/P: 3750Vac				
	Insulation Resistance		P: 100MΩ/500VDC/25°C	7/70% P.H		
	Ilisulation Nesistance	CCC	China	GB19510.1, GB19510.14

Set output current on the NFC programmer or via the App					
	Output Current (I) Range	300-952mA	953-1050mA		
SE-40-300-1050-W2D	Output Voltage (U) Range	9-42Vdc	See the curve below for details		
	Output Power (P) Range	2.7-40W	8.577-40W		

Set output current on the NFC programmer or via the App					
	Output Current (I) Range	200-714mA	715-800mA		
SE-30-200-800-W2D	Output Voltage (U) Range	9-42Vdc	See the curve below for details		
	Output Power (P) Range	1.8-30W	6.435-30W		

SE-40-300-1050-W2D

SE-30-200-800-W2D

Protective Housing Application Diagram

1. Use a tool to pry up the protective housing on the side panel.

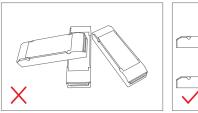

2. Pry up the protective housing in the side plate position with a tool.

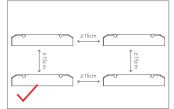

3. Connect to electrical wires with a screwdriver as wiring diagram shows.

4. Press down the tension plate to fix the the electrical wires.

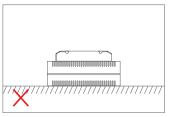

5. Close the protective housing.

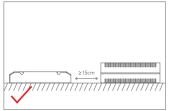

Installation Precautions

Please do not stack the products. The distance between two products should be \geqslant 15cm so as not to affect heat dissipation and the lifespan of the products.

Please not place the products on LED drivers. The distance between the product and the driver should be $>15 \,\mathrm{cm}$ so as not to affect heat dissipation and shorten the lifespan of the products.

Work with a NFC programmer (LT-NFC)

Change the output current, DALI address and other parameters on the NFC programmer. After modification, batch parameters can be written to the driver.

* Before you begin setting the parameters of the driver on the NFC programmer, please make sure the driver is powered off.

1. Read the LED driver

Power the programmer by using the USB cable, then select "NFC Driver Settings" and press "OK" button. Next, keep the programmer's sensing area close to the NFC logo of the driver to read the driver parameters.

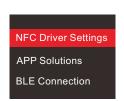

2. Change the driver parameters (Output current/DALI address)

On the home page of the programmer, press "Av" button to select the parameters you want to change and press the "OK" button to edit them. Then, press "Av" button to adjust the parameter values and press and press "4» to select the next needed value. After the parameter values are modified, save them by pressing the "OK" button.

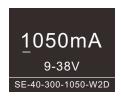

Note: (1) If the current value you set is out of range, The programmer will report an error; [2] The DALI address range: 0-63.

3. Write to the driver

On the home page of the programmer, press the "AT" button to select (>> Ready to Write), then press the "OK" button. After the screen displays "Ready to write...", please keep the programmer's sensing area close to the NFC logo of the driver. When the screen displays "Write succeeded", it means the parameters have been successfully changed.

Use the NFC Lighting APP

Scan the QR code below with your mobile phone and follow the prompts to complete the APP installation (According to performance requirements, you need to use a NFC-capable Android phone, or an iphone 8 and later that are compatible with iOS 13 or higher).

* Before you begin setting the parameters of the driver on the NFC programmer or via the APP, please make sure the driver is powered off.

Read/Write the LED driver

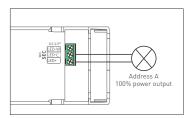

Use your NFC-capable phone to read the driver parameters, then set the output current, DALI address, other parameters, or set the advanced DALL template depending your needs. Save your settings and hold your phone close to the driver again, so the parameters can be easily written to the driver.

1. Read the LED drive

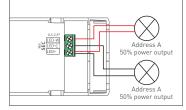

On the APP home page, click 【Read/Write LED driver】, then keep the programmer's sensing area close to the NFC logo of the driver to read the driver parameters.

2. Switch the dimming interface

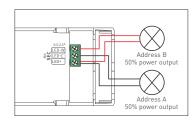

On the page of "Edit parameters", click [Dimming interfaces] to switch to the needed dimming interface: DT8 CT (DT8 1 channel), DT6 CT (DT6 2 channels), DT6 DIM (1 address for 1 channel / 1 address for 2 channels / 2 addresses for 2 channels).

DT6 DIM (1 addresses for 1 channels)

DT6 DIM (1 addresses for 2 channels)

DT6 DIM (2 addresses for 2 channels)

3. Edit the parameters

Click 【Parameter settings】 to edit the advanced parameters, like output current, DALI address, dimming curve, advanced DALI template, etc.

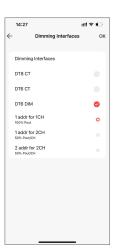

4. Write to the driver

After completing the parameter settings, click [Write] in the upper right corner, and keep the programmer's sensing area close to the NFC logo of the driver, so the parameters can be written to the driver.

Write/Read on the NFC programmer

Connect the NFC programmer to your phone and read the driver parameters with your phone. After editing the solution in the mobile App, you can sync it to the NFC programmer and write advanced parameters to mass LED drivers.

1. Connect to the NFC programmer

Enable Bluetooth on your phone and power the NFC programmer first. Then press the button on the programmer to switch to "BLE Connection" and press "OK" button to wait for Bluetooth connection.

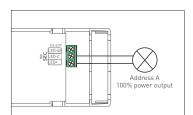

On the APP home page, click [Write/Read on NFC programmer] — [Next] to search for the programmer and connect to it.

2. Read the LED driver

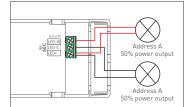

On the "Programmer information" page, choose any solution for editing. Then keep the programmer's sensing area close to the NFC logo of the driver, to read the driver parameters.

3. Switch the dimming interface

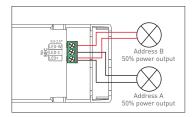

On the page of "Edit parameters", click 【Dimming interfaces】 to switch to the needed dimming interface: DT8 CT (DT8 1 channel), DT6 CT (DT6 2 channels), DT6 DIM (1 address for 1 channel / 1 address for 2 channels).

DT6 DIM (1 addresses for 2 channels)

DT6 DIM (2 addresses for 2 channels)

4. Edit the parameters

Click 【Parameter settings】 to edit the advanced parameters, like output current, DALI address, dimming curve, advanced DALI template, etc. Then click 【Save】 in the top right.

5. Write to the LED driver

When the programmer screen shows "Sync ... succeeded", click "BACK" button to return to the home page and switch to the "APP Solutions", then press the "OK" button to access the optional solutions. Select the corresponding solution by pressing the " +>" button, then keep the programmer's sensing area close to the NFC logo of the driver. After this, the advanced solution can be written to a large number of the same model drivers.

Advanced DALI template

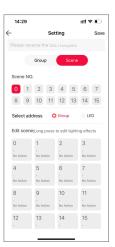

Integrate the functions of the DALI lighting system, edit the DALI group and lighting effects for scenes, then save them in the advanced template to achieve lighting programming. Setup page 1 (for Read/Write LED driver): Go to App home page — 【③】 icon in the top right — 【DALI template on pnone】.

Setup page 2 (for Read/Write on NFC programmer): Go to App home page — [Read/Write on NFC programmer] — [DALI template on programmer] .

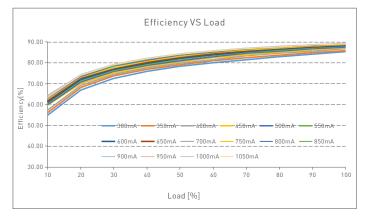

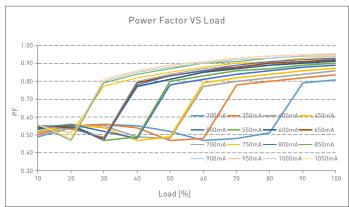

For more advanced solution settings, please scan the QR code below and check out the NFC programmer manual (model: LT-NFC).

Transportation and Storage

1. Transportation

Products can be shipped via vehicles, boats and planes.

During transportation, products should be protected from rain and sun. Please avoid severe shock and vibration during the loading and unloading process.

2. Storage

The storage conditions should comply with the Class I Environmental Standards. The products that have been stored for more than six months are recommended to be re-inspected and can be used only after they have been qualified.

Attentions

- This product must be installed and adjusted by a qualified professional.
- This product is non-waterproof (special models excepted). Please avoid the sun and rain. When installed outdoors, please ensure it is mounted in a water proof enclosure.
- $\bullet \quad \mathsf{Good} \ \mathsf{heat} \ \mathsf{dissipation} \ \mathsf{will} \ \mathsf{extend} \ \mathsf{the} \ \mathsf{life} \ \mathsf{the} \ \mathsf{product}. \ \mathsf{Please} \ \mathsf{install} \ \mathsf{the} \ \mathsf{product} \ \mathsf{in} \ \mathsf{a} \ \mathsf{environment} \ \mathsf{with} \ \mathsf{good} \ \mathsf{ventilation}.$
- When you install this product, please avoid being near a large area of metal objects or stacking them to prevent signal interference.
- · Please keep the product away from a intense magnetic field, a high pressure area or a place where lightning is easy to occur.
- Please check whether the working voltage used complies with the parameter requirements of the product.
- Before you power on the product, please make sure all the wiring is correct in case of incorrect connection that may cause a short circuit and damage the components, or trigger a accident
- If a fault occurs, please do not attempt to fix the product by yourself. If you have any question, please contact the supplier.
- * This manual is subject to changes without further notice. Product functions depend on the goods. Please feel free to contact our official distributors if you have any question.

Warranty Agreement

- $\bullet \quad \text{Warranty periods from the date of delivery: 5 years.}$
- $\bullet \quad \text{Free repair or replacement services for quality problems are provided within warranty periods}.$

Warranty exclusions below:

- Beyond warranty periods.
- Any artificial damage caused by high voltage, overload, or improper operations.
- Products with severe physical damage.
- Damage caused by natural disasters and force majeure.
- Warranty labels and barcodes have been damaged.
- No any contract signed by LTECH.
- 1. Repair or replacement provided is the only remedy for customers. LTECH is not liable for any incidental or consequential damage unless it is within the law.
- 2. LTECH has the right to amend or adjust the terms of this warranty, and release in written form shall prevail.
