

Violi presents the new tube straightener with saw blade cut

Violi Srl is an Italian manufacturer specialized in the design and production of industrial machinery typically used in manufacturing of metal tubes, bars and wires.

The company offers a wide range of reliable and easy-to-use straightening machines for metal profiles, both circular and complex, that can be applicable to different diameters.

Violi Srl has enlarged its range of straightening machines and is ready to present its latest machine for straightening and cutting tubes : the straightening machine with saw blade cut mod. VM/MRTSA.

This machinery is projected in

order to straighten and cut tubes with diameters from 8 up to 25 mm, and complex profiles with similar section.

MRTSA is composed by a

pay-off reel, both motorized or clutch, with an adjustment of the diameter of the coil and a winch for coil lifting, a double rotating group with wheels, and a

dragging unit with small shaped wheels or plastic polymer rollers.

The machine is provided with an encoder in order to easily define the length of cutting and the saw blade cutting group has an adjustable speed, controlled by a brushless motor.

If required, the machine can also be equipped with a special ejecting unit for unloading the product.
