

The patented take apart reel **EASYKOIL™ PLUS** can work as coil lifter: with lifting rings in "LIFTING" position barrel expands during lifting operation and take the coil up. With lifting rings in "FREE" position, barrel collapses during lifting operation and sets the coil free. All internal parts are manufactured with hardened steel.

EASYKOIL™ PLUS is available for 800 mm diameter flange and over. Can be dynamically balanced and it is machined on the parts in contact with the wire.

EASYKOIL™ PLUS can be supplied with 4, 6, or 8 slots for the metal straps insertion and can also be supplied with circular slots in the flanges to fit cardboard barrels.

EASYKOIL™ PLUS can be supplied with changeable flanges to make coils having different width. To prevent wear problem, due to the high rotation speed, hardened changeable bushings are recommended.
