New Carpet
Purchase

Here are some helpful hints to ensure a smooth, hassle-free, quality installation.*.

When your install is scheduled you will be given an approximate time frame the installer will arrive at your home.

The ambient temperature in the home must be at least 70°F for 48 hours prior to the scheduled installation date. If installing over concrete, the slab's temperature should not be less than 70°F. The installer will need a clean place to cut and store materials, either a driveway or garage floor is acceptable. The installer will need electricity in your home.

For Existing Homes

- ✓ Please move all furniture (unless it's included in your bid).
- ✓ If furniture moving is included in your bid please be advised that our installers do not remove books, glass, small items, or unplug electronics. Please strip bedding, remove drawers from nightstands and dressers, etc. Have professionals move your pianos, safes, pool tables and grandfather clocks as we do not provide this service.
- ✓ If you are removing existing carpet prior to installation, do not remove tack strip. Please make sure the floor is free of debris, sand and dirt. If our installers are removing existing carpet, he will take care of this for you.

For New Construction

- ✓ Please be sure the floor is free of debris, sand, and dirt prior to installation.

Routine Care and Cleaning

To maintain the manufacturer warranty on the product, professional carpet cleaning is required every 12-18 months.

**In addition to the manufacturer warranty on the product, BlvdHome provides a one-year labor warranty.*
