

NUVELLE STERLING : FLOOR CARE GUIDE

for UV-lacquer sealed and handcraft sealed floors

Coated floors offer sufficient protection against dirt and liquid ingress. Cleaning and care of your floor is thus easy to manage.

1. Dry Cleaning

- The best way to remove loose, coarse dirt (Eg. dust and sand particles) is to use a soft brush or vacuum cleaner.

Regular cleaning is easiest this way.

2. Routine Cleaning

- After dry cleaning, clean your floor with vinegar solution and a slightly damp standard household mop (not the microfiber variety). Allow your floor to dry.
- If the vinegar solution does not produce satisfactory results, we recommend you use our HYDRO CLEANER instead.
The HYDRO CLEANER is diluted in warm wipe water (1:10) or applied with a soft cloth to a specific area in concentrated form. HYDRO CLEANER is a wax-remover. We recommend you apply HYDRO CARE after use to help the formation of a fresh, new protective layer.

3. Care

HYDRO CARE produces a protective film and provides long-term protection when used regularly.

- Apply HYDRO CARE with a standard household mop after thorough cleaning with HYDRO CLEANER. HYDRO CARE is diluted 1:50 with water and applied to the floor with a slightly damp cloth. Allow to dry.

IMPORTANT NOTE :

Whenever applying cleaning and care products to your floor always ensure no standing water is left behind. This can damage your flooring (swelling).

Do not use any type of microfiber mop as it may scratch your flooring.

1. Dry cleaning with vacuum cleaner or soft brush

2. Wet cleaning with HYDRO CLEANER or Vinegar-water

3. Touch up with HYDRO CARE
