Timber Flooring

Godfrey Hirst

Oak Elegance - Coastal Oak

Oak Elegance - Natural Oak

The Natural Choice.

Indulge in the timeless allure of nature with stunning timber flooring that defies trends and endures throughout the ages. Timber floors create a classic statement piece that not only elevates your home's aesthetic but also adds value.

At Godfrey Hirst, our engineered timber floors are uniquely crafted to accentuate nature's variations in the knots and grains of each board. Your timber floor will be entirely unique, with no two planks alike, truly one-of-a-kind. Revel in the depth of colour and stunning variation that only natural timber can provide.

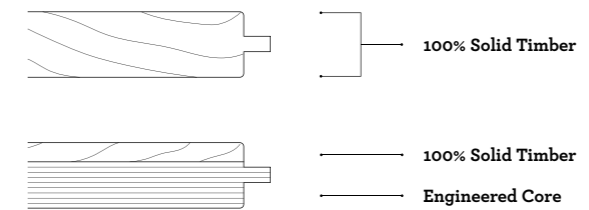

Choose a floor that defines your space, with impressive wide and long planks, or even fashionable chevron and herringbone designs, for an added touch of luxury.

Why Choose Engineered Timber Flooring?

Timber flooring offers a range of advantages that make it an attractive option for both new builds and renovations.

Engineered wood, in particular, boasts exceptional stability due to its multi-layered construction. The top layer, or wear layer, typically comprises hardwood such as oak, while the base layers consist of fast-growing woods like poplar or hevea. The perpendicular grain alignment between each layer mitigates the risks of seasonal movement, cracking, and warping, ensuring long-lasting performance.

Moreover, timber flooring's installation flexibility is a noteworthy selling point. It can be installed over concrete and timber, floated, or glued down, and comes pre-finished and coated, allowing for immediate use.

Overall, timber flooring's superior stability, versatility, and environmental consciousness make it a compelling option for those seeking a durable, stylish, and eco-friendly flooring solution.

Surface Textures

Within the realm of woodworking, there exist three captivating varieties of surface textures. These exquisite techniques involve embellishing the surfaces of wooden materials. Different processes can be used to either accentuate or reduce the visual impact of the tones and textures within the timber.

Smooth

Immerse yourself in the sleek and contemporary allure of smooth timber flooring. Its smooth finish creates a more uniform top surface appearance that beautifully showcases the colour. The rich tones of the wood shine through, allowing the grain to take the spotlight. This option is perfect for wood enthusiasts who appreciate its fine texture, as it provides a stunning backdrop for the natural knots and inherent character of the timber.

Brushed

Experience the captivating elegance of brushed wood flooring in your space. Our expert wire brushing technique creates a texture that is visually captivating and tactically pleasing. This process opens the surface grain structure, enhancing the colour contrast between each plank and adding subtle definition. Delicate yet resilient, this technique effortlessly conceals everyday wear and minor scratches, ensuring your floor maintains its exquisite appearance even after active use.

Vintage

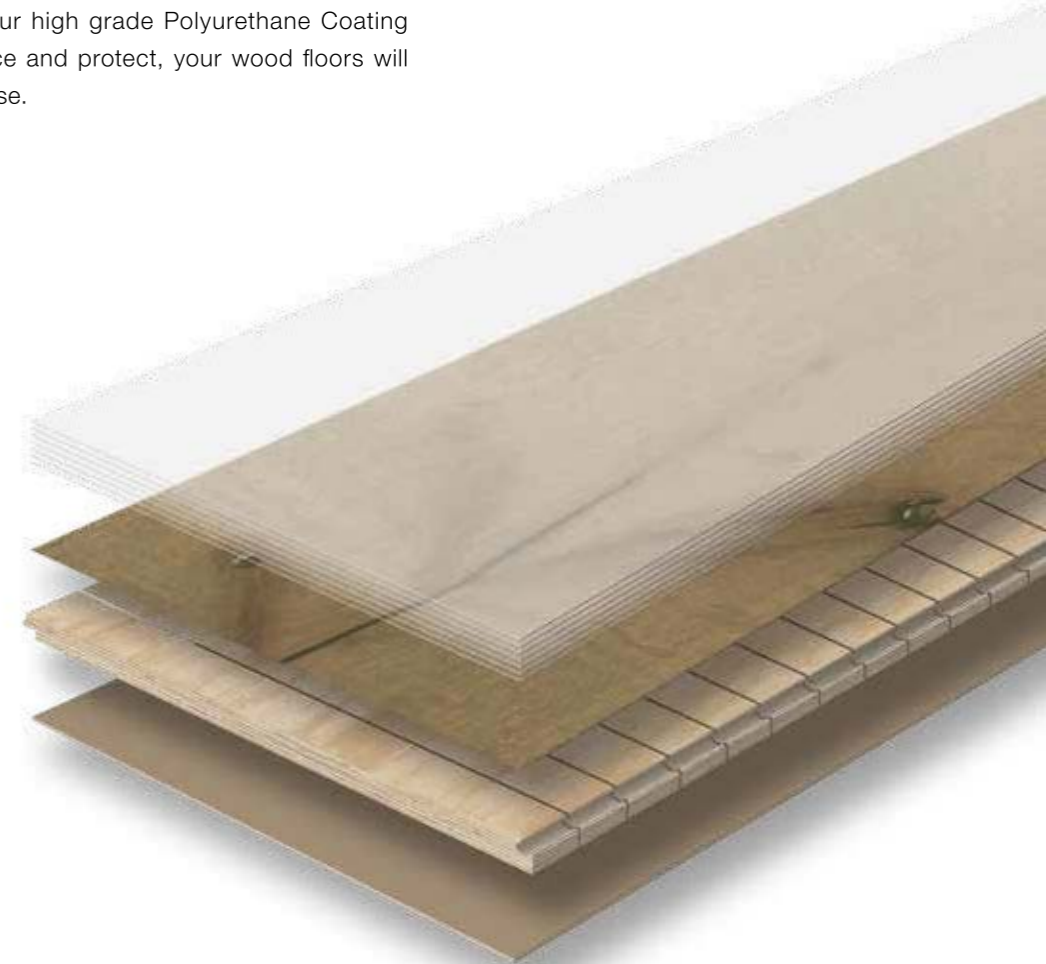

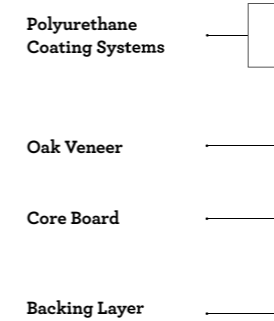

Elevate your space with the timeless allure of vintage timber floors. Crafted using traditional hand techniques and tools like metal gouges, chisels, and planes, each plank embodies the authentic aesthetic of weathered wood. Meticulously hand-distressed, these floors exude refined aged texture while retaining a soft and inviting touch. The layered notes of character never go out of style, infusing any setting with a touch of rustic charm.

Protective Coating

All our Godfrey Hirst timber planks are pre-coated for your convenience, with no need to apply any lacquer or oil you can use your floor immediately after installation.

Polyurethane Coating System

Protected by 6-7 coats of our high grade Polyurethane Coating System, designed to enhance and protect, your wood floors will look beautiful after years of use.

Profiles

Using age old techniques and cutting edge technologies each board is crafted to create visually stunning results on your floor.

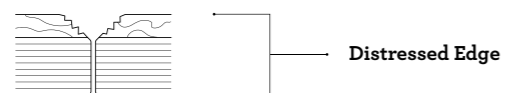

Edge types are the finished sides and end joints of each plank. The edge profiles are carefully crafted to add to the style of board and makes a big difference in the overall effect of how your floors look once installed.

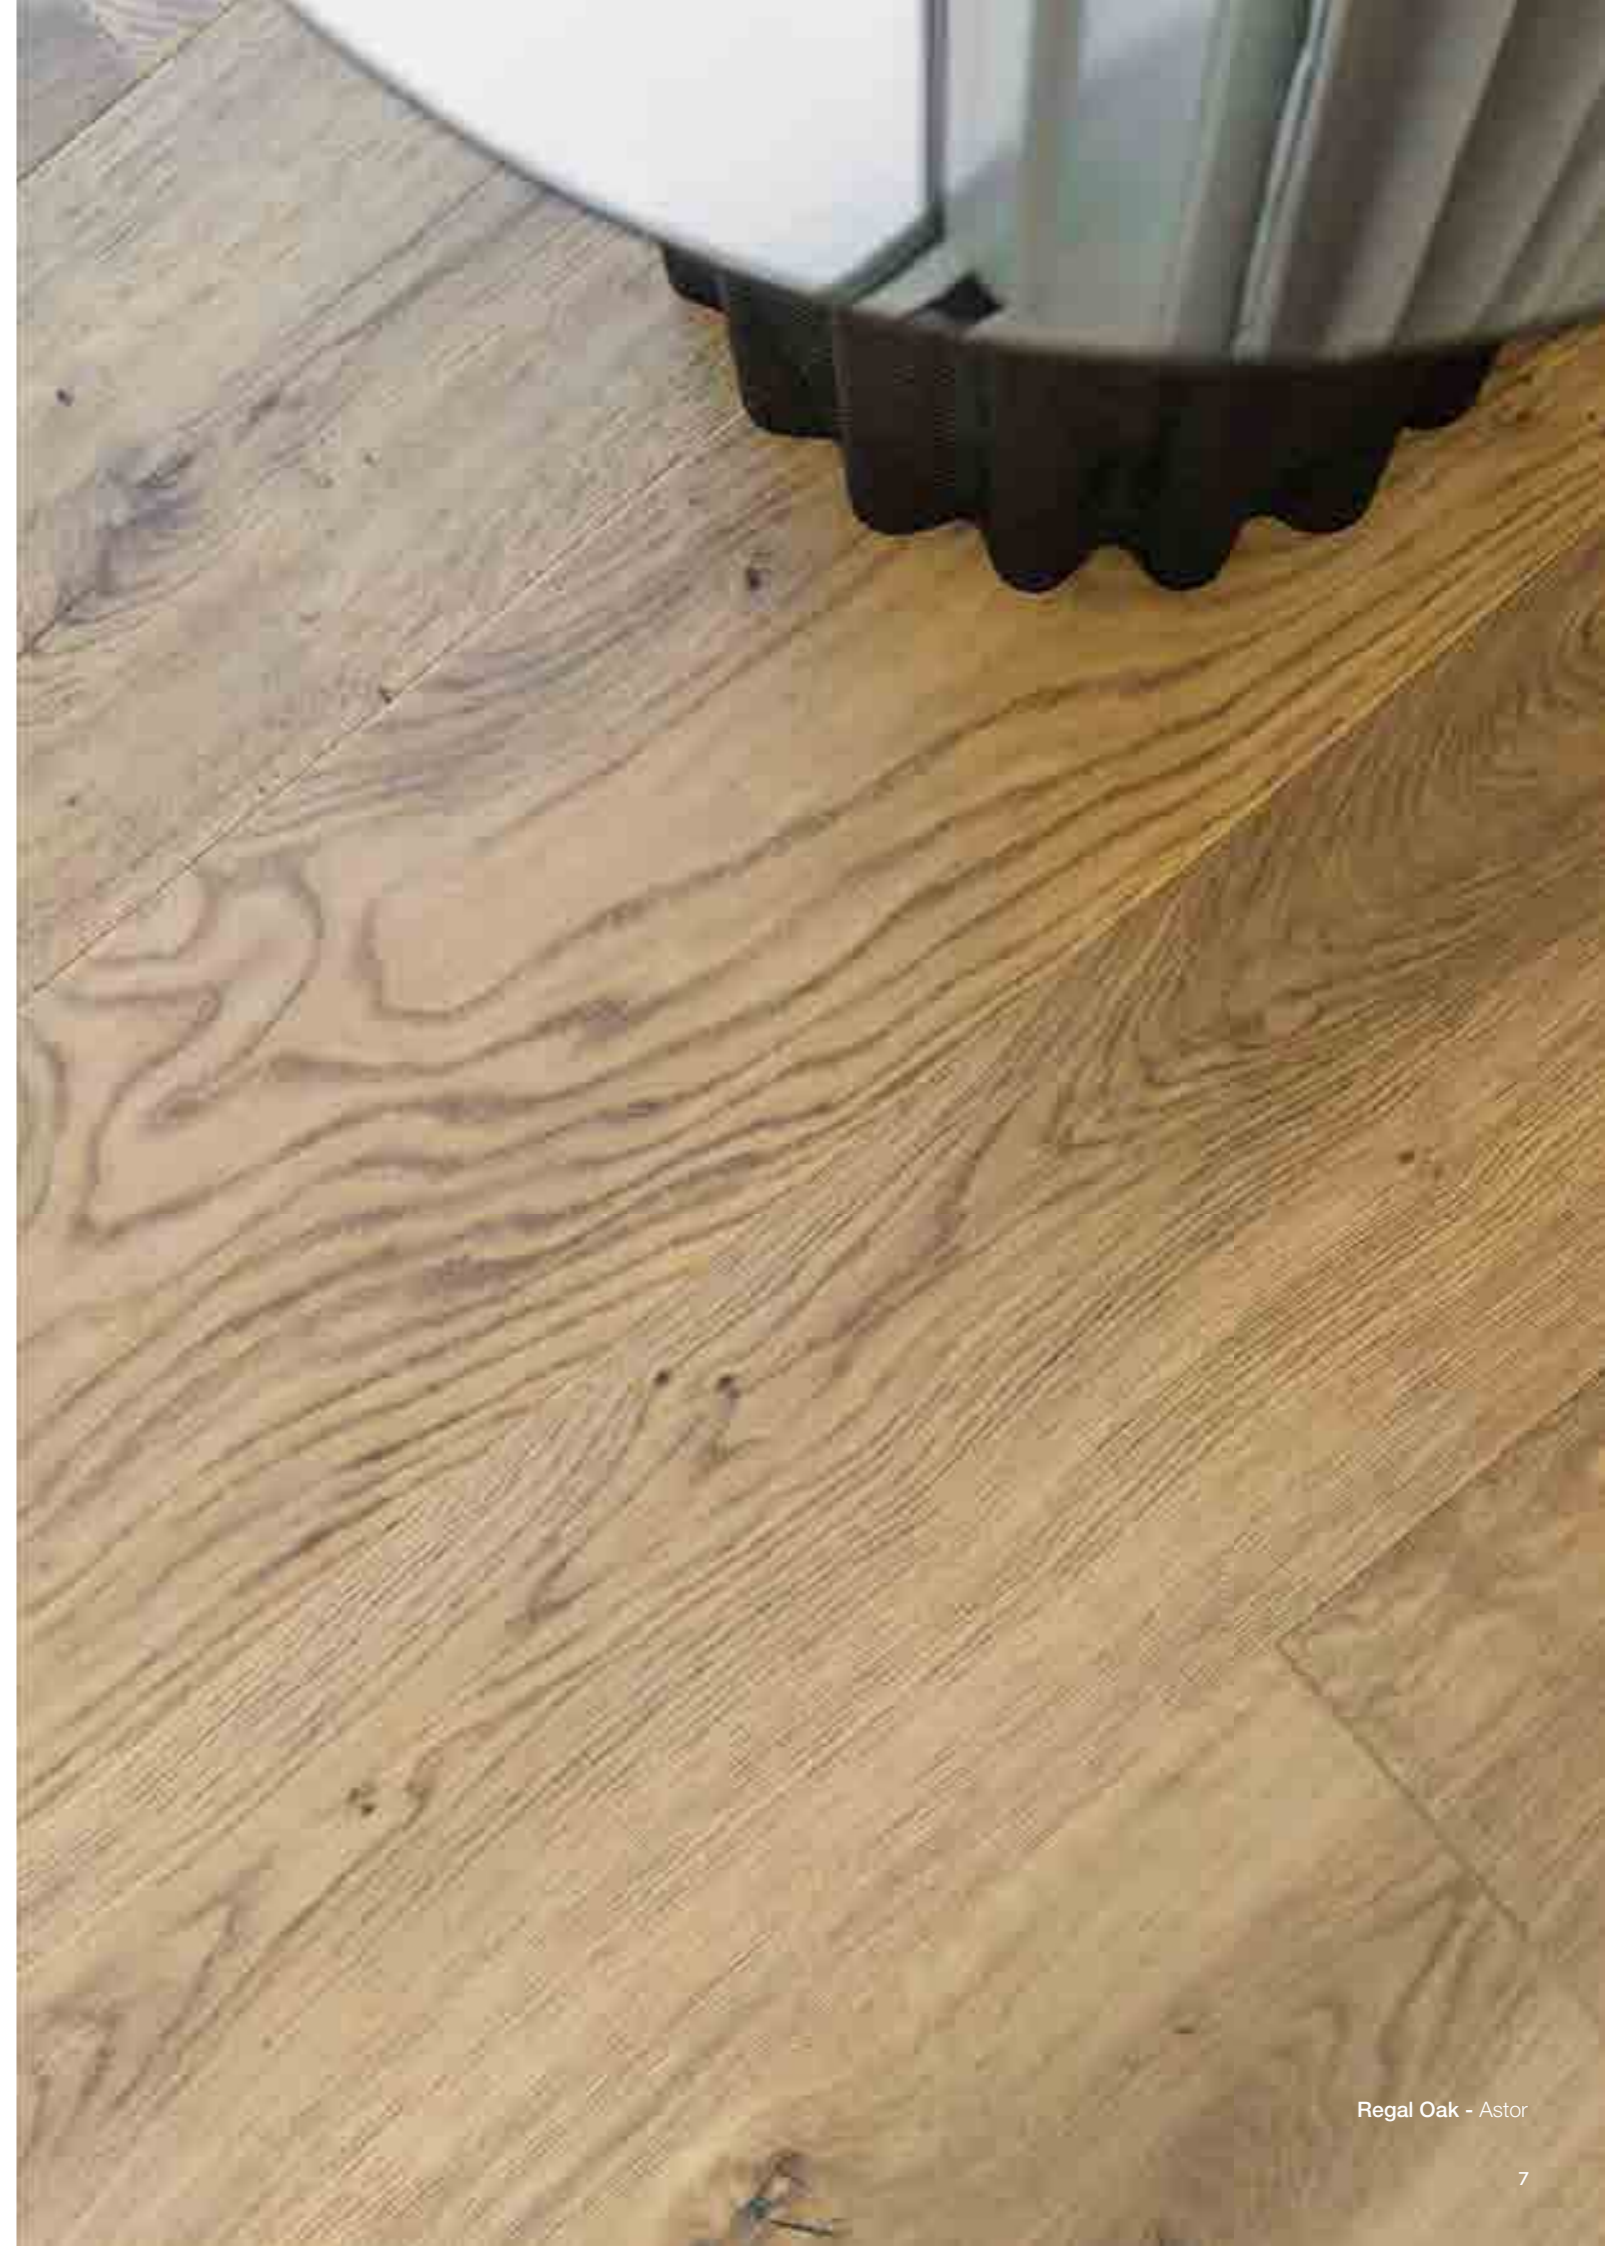

Square edge hard flooring is made up of boards cut to exactly 90 degrees. Perpendicular square edges fit snugly together between one board and another. This creates a finish that is clean and super-sleek, perfect for minimalist and contemporary spaces.

Micro-beveled edge hard flooring has a shallow V groove that accentuates each individual plank in a subtle way. This versatile edge style lends itself to both traditional and modern décors.

Distressed edge hard flooring creates a vintage look and adds to the character of your floor by weathering the edges and creating definition between each plank. Uniquely distressed this profile style is perfect for rustic or high traffic interiors.

Naturals - Blackbutt

Features

At Godfrey Hirst, we understand that each timber plank is truly one of a kind, with its own distinct characteristics, much like fingerprints. That's why our curated timber ranges offer a diverse selection of looks and textures.

When it comes to timber planks, embracing their natural characteristics is essential. These unique features enhance the individual character of each plank, adding a touch of beauty that sets it apart. By considering these design features, you can ensure that your chosen flooring not only looks fantastic but also perfectly aligns with your specific desires.

While we have made every effort to ensure that the colours and specific wood characteristics displayed on our website and marketing materials are accurate, please note that these images may differ slightly from the actual product. We kindly request that you carefully inspect your product under good natural light before installation to confirm your chosen range and colour.

We highly recommend that our products be handled by experienced installers. This ensures a professional finish. The installer will ensure a balanced distribution of grading throughout the room. We suggest opening and laying out 4 to 6 packs prior to installation to allow for the natural variations of the timber to be evenly distributed. This will result in a stunning and uniquely beautiful final outcome.

Cracks and Checks

You will come across gentle reminders of your timber floors previous journey through nature, in the form of subtle cracks and checks. These unique markings can be caused by temperature, dry or humid conditions or high winds. These cracks are generally filled with epoxy, or artfully restored in the case of our Vintage timbers.

Medullary Rays

Medullary rays, delicate and white, are natural features found in quarter-sawn timber. They run across the growth rings, serving as nature's way of transporting water and nutrients within the tree. These rays showcase the wood's intricate inner structure and add a touch of elegance to each plank.

Knots

Knots, circular or oval-shaped features in wood grain, bring a distinct charm to your floor. These natural markings occur when a branch emerges from the main trunk, creating a darker-coloured center. Open knots are filled with matching-coloured filler, seamlessly blending with the surrounding wood.

Sapwood

Gently nestled beneath the bark, the sapwood resides as the outermost layer of the tree trunk. It is characterised by its lighter colour compared to the older and darker heartwood, which resides in the inner layers. Experience the contrasting layers of wood, each with its own unique beauty.

Authentic Grade

Experience the perfect balance between sophistication and natural beauty with Authentic grade timber flooring.

Each board showcases the unique character of the wood with colour variation and smaller knots that add a touch of rustic charm. The boards have a sleeker look with less rough spots and character marks than other ranges. With authentic grade timber flooring you can achieve a beautiful aesthetic that elevates the overall ambience of your home whilst acknowledging the unique growth pattern of the tree it came from.

Character Grade

Transform your space into a charming retreat with the captivating beauty of Character grade timber flooring.

This unique flooring option blends enchanting medium sized knots with cleaner boards including pin knots to create the perfect balance between rustic and refined. And with the use of heartwood and sapwood, every board boasts a distinctive colour variation that adds character and depth to any room. Choose Character grade timber flooring for an authentic and traditional touch that will make your space truly remarkable.

Heritage Grade

Bring a truly remarkable and traditional feel to your space with the unique touch of Heritage grade.

With gorgeous larger sized knots and unique streaks of sapwood, each board tells a story of its natural origin, adding character and charm to any room. Heritage grade flooring is an ideal option if you desire an antique or reclaimed look. It boasts charming end splits, captivating colour variations, and handmade surface texture enhancements that beautifully highlight the innate qualities of the wood. Why settle for ordinary flooring when you can elevate your space with the timeless beauty of Heritage grade timber?

Australian Native Grade

Australian native wood flooring, such as blackbutt, spotted gum, and ash, are popular due to their durability, natural beauty, and unique characteristics.

Blackbutt boasts a straight grain and uniform texture, while spotted gum features a distinctive wavy and interlocking grain pattern with more knots. Both offer high colour variation, creating a stunning, organic look.

Ash exhibits a straight grain with occasional swirls and fewer knots than spotted gum. With their unique grains, natural markings, and rich variations, these native woods embody timeless authenticity and character.
