OPULENT WEAVE - 10 Silk

# B

Biophilia focuses on human's innate love of nature, suggesting a genetic connection to the natural world built through centuries of living in agricultural settings.

TRE  
-ND

Driven by the global desire to embrace and protect the environment, we are now seeing natural elements being incorporated at every level of interior design, from organic materials right through to large-scale green spaces. From natural parks to dog parks, we are now spending more time outside than ever. Indoors, we have also seen a large increase in the purchase of indoor plants, with the plant parent craze at an all-time high.

## NEUTRAL WARM TONES

Neutral warm tones of ecru flooring complement the leafy green colour palette of the sprawling indoor plants. Homeowners are looking to source more organic material to replace traditional resources, offering a unique and authentic finish.

## BOTANICAL DESIGN

*Taking nature  
into consideration  
every step of  
the way.*

We are witnessing a trend of horticultural influence in interior design, with an increase in the use of patterns, gradients and organic shapes inspired by nature and foliage. Where plants are too much of a commitment, designers are integrating organic green pigments and natural fibres in their choice of ceramics, accents, and finishes, to echo the imperfections of nature.

Natural elements like bamboo, rattan, organic cotton and raw edges add depth to your home design, while maintaining a connection to nature. Large plants in pots can add volume to indoor and outdoor spaces and serve as a perfect complement to furniture, decor, and other plants in bloom.
