Enviro Bac Lite®

With increased recycled content over standard backing, handling high RH% subfloor installation and providing similar performance to thicker cushion backing such as Enviro Bac Plus®, Enviro Bac Lite® also allows for approximately 35% less transport emissions compared to thicker and heavier cushion back solutions*.

Enviro Bac Lite® is also designed to reduce the thickness variation when adjoining lower profile finishes in order to utilise standard trim solutions or no trim at all when installing adjacent to our 4.5mm LVT offering. Enviro Bac Lite® contains approximately 85% recycled content (recycled material is a mixture of pre- and postconsumer material).

1. Yarn
2. Primary Backing
3. Pre-Coat
4. Enviro Bac Lite® Cushion Back

Features

- Enhanced acoustic properties
- Prolonged life expectancy of the carpet tile
- Allows for approximately 35% less transport emissions compared to thicker and heavier cushion back solutions*
- Eligible for take back at the end of their life under our GH Commercial Recover Program
- Enviro Bac Lite® contains approximately 85% recycled content (recycled material is a mixture of pre- and postconsumer material)
- More flexible than standard cushion backed tiles for ease of installation
- Increases minimum NRC (18oz+ tiles) to 0.25§
- In stock on select ranges for no minimum order quantity or additional lead time
- Available option for all Australian Made carpet tiles – some minimum order quantities and lead times may apply
- Designed to use existing trim profiles transitioning between resilient sheet/LVT to carpet tiles
