THE BENEFITS OF QUALITY WOOL CARPETS

RENEWABLE

Sheep grow wool continuously and can be shorn every 9 to 12 months.

BIODEGRADABLE

Wool fiber will naturally decompose in soil and slowly release nutrients back into the earth.

HYPOALLERGENIC

Wool is a nonallergenic fiber, which is resistant to the growth of bacteria and dust mites.

CLIMATE CONTROL

Wool fiber can absorb and release moisture, helping control internal humidity levels.

FIRE RESISTANT

Wool fiber is naturally flame resistant and has a very high ignition threshold.

AIR QUALITY

Wool fiber absorbs common pollutants such as VOCs and can improve indoor air quality.

STAIN REPELLENCY

Wool fiber repels most liquid spills so that stains can be removed if attended to promptly.

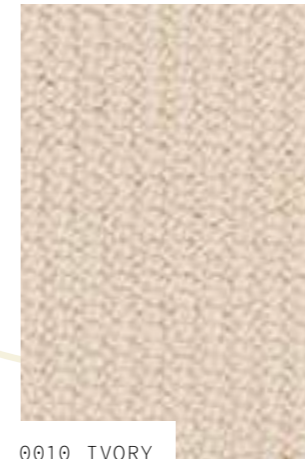

WOOL FUNDAMENTALS
