

Hot Welding Rod

Technical Specifications

PRODUCT INFORMATION

Composition	PVC
-------------	-----

SIZE & PACKING

Packaging	1 piece/box
Length	100 Lm (cut length available)
Diameter	4,00 mm
Weight	20 gr/m
Total weight	2.000 gr
Colors	Colour matched to Tempo & IPerform 70

INSTALLATION

Welding point	160 - 200 °C
Tool	Groover / Mozart knife

Welding is the only option for ensuring closed and tight seams. This is important for watertightness and bacterial resistance. Hot welding is only recommended on commercial products (it needs sufficient wear layer thickness (+/- 0,45mm) and the right product construction). Godfrey Hirst offers a large range of matching and suitable welding rods and does not recommend the use of products from other manufacturer
