Welcome to the open house for the Sharon Lake Improvement Project. We invite you to learn about the project at your own pace. Throughout the room are maps and pictures showing the improvements coming to the lake. Great Parks experts are here to discuss the project with you and answer any questions you may have.

Project Overview
Great Parks will soon begin the construction phase of the Sharon Lake Improvement Project, a major, multi-year initiative to renew and improve the lake as a recreational resource and preserve its beauty as a breathtaking conservation area. With extensive planning nearing completion, Great Parks will drain the water from the 35-acre lake this fall, before repositioning a buildup of soil and silt in the lake to double the existing wetland areas. When complete, the project will improve recreation activities and access to natural areas on and around the lake.

Project Plans
This project will bring improved opportunities to enjoy the lake, new wildlife habitat, and increased access to natural areas. Watch for these new features coming to Sharon Lake:

- Educational boardwalk
- Floating, accessible kayak launch
- Fishing pier
- New wetland area

Construction Closures
The Sharon Lake Loop Trail and Sharon Lake Boathouse will be closed during construction. However, Great Parks offers many other options to enjoy our big lands and waters:

- Sharon Lake playground and snack bar – OPEN
- Sharon Woods trails, including the Award-Winning Gorge Trail – OPEN
- Trails and lakes at Winton Woods, Glenwood Gardens and Lake Isabella – OPEN
