

Solar company!

what if...

... there could be a new future for green energy?

The vision that has always appeared impossible has now become a reality. The sun is the most self-sufficient and effective source of energy; it is an inexhaustible source that has determined our past and will shape our future. BISOL combines visionary and progressive thinking to deliver innovative premium quality products and services with an ambition to offer the essential benefit – green electricity!

Dr. Uros Merc, founder and President of the Board of BISOL Group

BISOL Group is a European manufacturer of premium photovoltaic modules and it provides a full range of photovoltaic solutions. Our vision is to create a greener environment and future energy independence by continuously investing in technology, developing visionary products and increasing returns from photovoltaic investments. Across Europe, we are making green energy more cost-effective compared to conventional energy sources.

Throughout history, the most passionate people have brought the most profound change. The best ideas have come from those with the brilliance and devotion to believe anything is possible. At BISOL Group, the world's leading experts are raising industry standards and inventing creative solutions. Because we design products that offer the strongest lifetime energy yields, green energy has become more attractive than ever before.

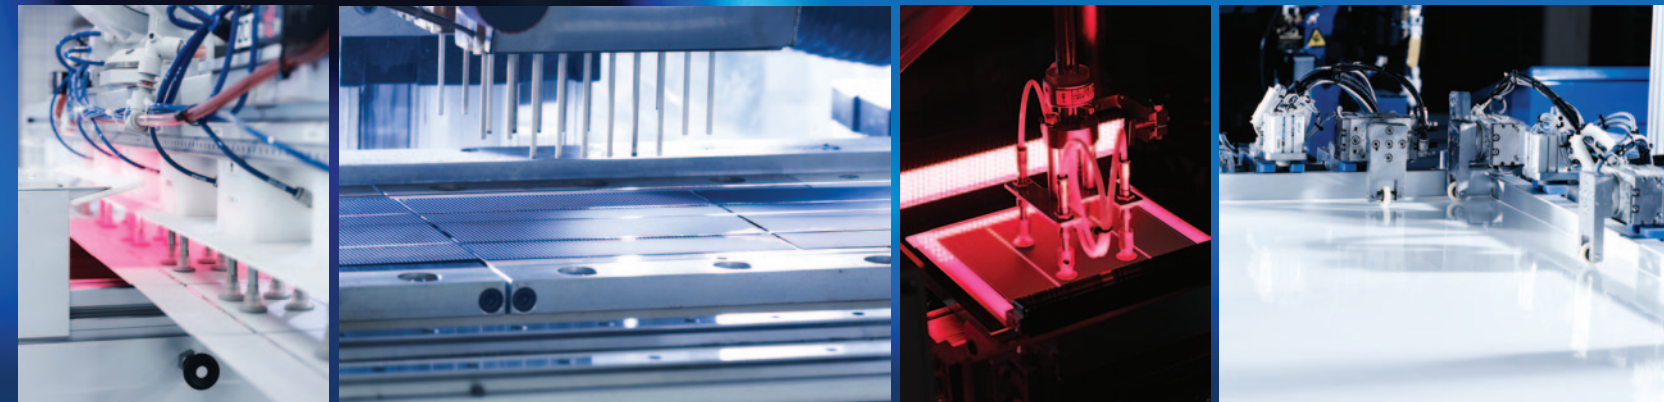

what if...

... technology and environment could go hand in hand

We keep our production process within the European Union because we passionately believe this helps us promote sustainability and ensure better quality control. Toxic materials and industrial waste are an environmental burden to future generations, so we eliminate the use of toxins and handle waste responsibly.

We carefully select suppliers to provide the components and materials we use in production, and all our materials are pre-certified and rigorously tested. By only using top quality components and materials, you benefit from durable products that last longer.

Throughout the production process we perform rigorous quality checks to ensure our modules offer flawless performance and a lifetime high-energy yield. We work in a flexible production environment with state-of-the-art equipment, which lets us respond quickly to the needs of a changing market.

what if...

... one brand met all your solar needs?

Our in-house research and development team works closely with world-renowned research centres to introduce innovative technology and powerful products. We have all you need to produce solar energy: from premium quality PV modules, industry-leading mounting systems, project design support, to PV plant performance monitoring and finance for large-scale PV plants. Because we provide a comprehensive range of products and services, you only need one company for all your solar energy requirements.

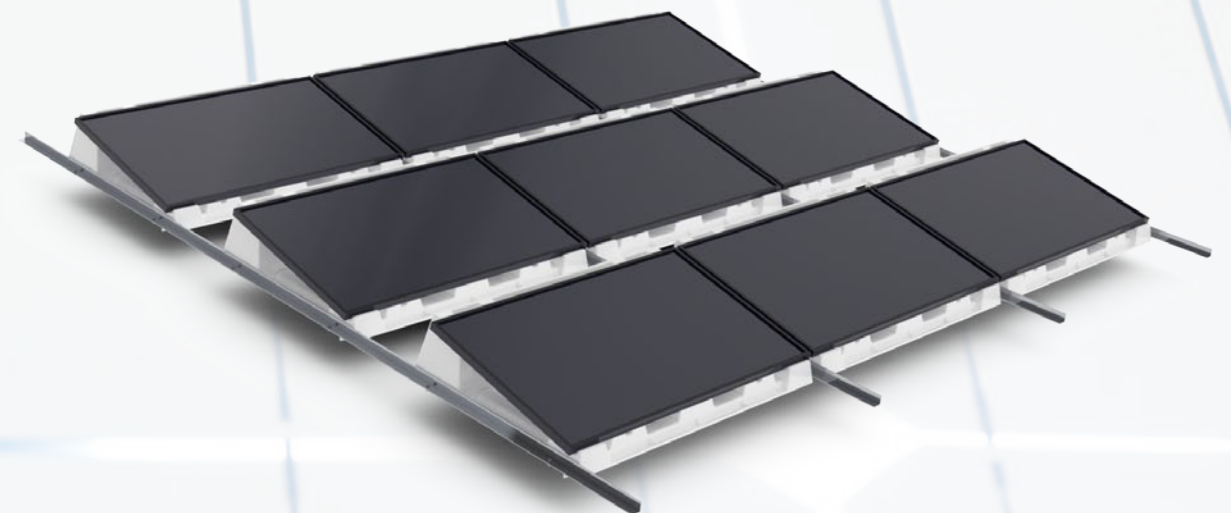

BISOL crystalline photovoltaic modules are recognised globally for their premium quality, excellent performance and aesthetic design. The high-power modules come with an extended 10-year product warranty and strictly positive power output tolerances. TÜV testing proved that the modules have extremely low degradation rates, are very robust and have an especially long lifespan. According to the independent PHOTON module yield test, BISOL PV modules are one of the world's best-performing products. Because they are manufactured from strictly quality materials, they last longer and therefore increase your lifetime energy yield. This increases the profitability of your investment.

We combine performance with an elegant design which integrates perfectly into the aesthetics of your home. Our BISOL full-black modules and building integrated solutions are notable for the way they combine form and function.

We design our own complete solutions for mounting systems to be easily installed and give long-term performance, which saves you time and similarly increases the profitability of your investment. The BISOL HDPE mounting system, also designed in-house, is especially suitable for flat roofs. It requires no penetration of the roof and remains hidden from the eye due to its flat angle. With a wide range of BISOL aluminium profiles, hooks and other accessories, we offer an industry-leading solution for any type of roof or ground-mounted PV system.

what if...

... we could really make a difference for future generations?

We live in a world borrowed from our children.

This is why we take our responsibility to the environment and the community around us very seriously. From the conception of a new product all the way to its everyday use, we consider our carbon footprint. It takes just over a year of operation to pay back the energy used to produce the BISOL modules, which lets you quickly make a positive contribution to the environment.

As a member of CERES, the non-profit organisation who recycles all our modules, we are sure that the raw materials from our products can start a new life in a sustainable world for future generations. The BISOL HDPE mounting system is also manufactured with recyclable materials, which further reduces our impact on the environment.

Being sustainable also means giving back to the community.

This is why we strive to help our employees and the communities we work in. Through the years, we have worked hard to create jobs, raise awareness of renewable energy's importance and contribute to the development of the photovoltaic industry. We are especially passionate about educating the youngest generations, who are our hope for the future.

what if...

... you always came first?

Keeping our customer satisfied is the driving force behind our business. That is why our team develops green energy solutions tailored to your specific needs. From our offices throughout Europe, we provide fast and reliable support.

Quality is more than just a word.

BISOL uses the best materials to give you cutting-edge products, ensuring you always get the most from your green energy investment. Additionally, our highly trained aftersales support team are always on hand to offer you an unsurpassed service.
