

FIREWRAP

FIREWRAP

The durable solution for fireproof solar cabling

RoofSupport FireWrap is a fire-resistant cover that wraps around solar cabling. It can be used in combination with the RoofSupport Firewall Bracket, or separately.

WHY ROOFSUPPORT FIREWRAP?

Available in any size

Standard size 400 x 420 mm, material thickness +/- 19 mm. Also available in other sizes.

Resistant to high temperatures and fire

The interior is made of insulation material with high temperature and fire resistance. Fire-resistant for 60 minutes at a temperature of 950°C.

Resistant to high temperatures

The exterior material is resistant to high temperatures, water-repellent and UV-resistant.

Easy closure

Three stainless steel tension straps with clamp buckles make the FireWrap easy to close.

Conforms with EN50618

Routing of up to 30 cables of 6 mm² per FireWrap, in accordance with EN50618 (red and black separated).

Service life of 25 years

With a minimum service life of 25 years, FireWrap is also the most durable solution for fire proofing your cabling.
