Forest Garden Planning Checklist

- \Box 1. Survey
- \Box 2. Features
- □ 3. Plants
- \Box 4. Pictures
- □ 5. Map

1. Survey

1.1 Position

- Compass orientation:
- <u>Elevation</u>:
- Slope

1.2 Elements

- Water
- <u>Earth</u>
- <u>Wind, prevailing</u>
- <u>Sun</u>
- <u>Climate</u>

1.3 Features

- Existing plants
- Utilities
- Structures
- Access

1.4 Situation

- Privacy
- Noise
- Smell
- Pollution

1.5 You

- Household setup (family members, pets, ages, activities)
- Energy
- Knowledge
- Time
- Resources

2. Features

What features do you want in the garden? Essential: <u>wildlife features</u> eg pond, water conservation, <u>nutrient budget</u>. Also, seating, polytunnel/greenhouse, annual veg beds, ball games area, bird feeding, bee hotel, wildflower meadow. Write them all down!

3. Plants

List all the plants you want! Write them all down and *then* figure out if you can grow them. Consider growing native plants where possible, as they have co-evolved with wildlife and so provide better food and habitat resources. A couple of great websites are <u>Plants For A</u> <u>Future</u> and <u>RHS Plant Finder</u> (which has a <u>UK native plant filter</u>).

Gather as many inspirational photos as you can, of anything and everything. Print them out and stick them on your walls. A fantastic tool to collect and share your images is <u>Pinterest</u>.

5. Map

Make a map of the land. It can be very simple.

- For paper plans, I like using 5mm square paper, preferably A3.
- For larger areas, print out a screenshot from <u>Google Maps</u> or <u>Bing Maps</u>
- There are lots of online tools, eg <u>Scribble Maps</u>
- If you are computer savvy, consider using CAD with a satellite map. I use <u>QCAD</u>, which is very powerful. Another free program is <u>LibreCAD</u>

The main purposes of the map are:

- Mark important features
- Try out different tree positions

Other tools

- <u>Simplenote</u> is my favourite note taking tool, for computer & phone
- <u>Cloudinary</u> is the best image hosting service
