

Bordeaux Trough Planter Model 8890

MIS086-1

PACKAGE CONTENTS: 1x Bordeaux Trough Planter

MATERIAL: Polyethylene

IMPORTANT NOTE:

- Drainage holes are not pre-drilled allowing the planters to be used indoors. For outdoor use drainage holes need to be drilled.
- MAYNE planters are very durable but we still recommend lightweight fillers and potting mixes for optimal plant growth.
- For added stability we recommend filling the bottom of the planter with stone or sand. See reverse for more details.

In the event of missing or defective parts, please email customerservice@gomayne.com or call our customer service department toll free at **866-363-8834** (available Monday through Friday, 8am-5pm EST).

General Information:

- Read instructions carefully before planting.
- For best results when cleaning, we recommend using a soap solution and high-pressure water.
- On the reverse side of this instruction sheet there are a few potting recommendations, but please consult your local garden centre or landscape horticulturist for more detailed information.
- All-weather planters molded with high quality polyethylene and designed for year-round use.
- 5-year commercial warranty.

Potting Recommendations:

We strongly recommend the use of a good quality potting mix to encourage healthy root development and proper drainage.

Indoor Use:

The Bordeaux planter does not come with any pre-drilled drainage holes to allow for indoor use.

Outdoor Use:

For outdoor use, drainage holes need to be drilled in the bottom of the planting area and the base of the planter to provide proper overflow of excess water (see diagrams below). Failing to drill drainage holes may cause oversaturation of the planted goods and in some cases may cause bowing or bulging of the planter walls.

On the inside of the planter drill four 3/4in drainage holes in the marked locations.

On the bottom footing of the planter drill four 3/4in drainage holes in marked locations

INSTALLATION TIP:

Remove the plug in the bottom of the planting basin and use a funnel to fill the inner cavity with gravel or sand. This will add more stability for use in high traffic and high wind areas.

NOTE: The information above is only suggested and MAYNE holds no liability for the condition or growth of your plants.
