

# What You Won't Get With Appalachian Traditions Panels:

Sorted for visual uniformity, ease of matching and blending to avoid mismatched cabinetry.

“Consistently Inconsistent” plank match creates harmonious blending, avoiding “machine gun” look and other undesirable repeats.

Manufacturing with tight side out construction ensures even finishing to avoid the “barber pole” effect.

Whether your project is traditional or contemporary, the look of these panels is unique and full of natural character that works with any style.

To streamline regionalized shipping and service, Appalachian Traditions is produced in six of Columbia Forest Products' plywood mills.

And don't forget when Appalachian Traditions is manufactured on veneer core platforms assembled with PureBond® formaldehyde-free technology, you can be assured that these panels have no added formaldehyde and meet latest CARB, EPA, LEED, and Living Building Challenge criteria.

For more information on Columbia's Appalachian Traditions panels, please call one of the regional numbers listed below or visit [www.cfpwood.com](http://www.cfpwood.com).

## Features & Benefits

› **Consistently Inconsistent.** Plank matched veneers replicate a true lumber look. Every sheet has a visually compatible appearance, with well distributed natural characteristics.

› **Seven Hardwood Species.** Appalachian Traditions is available in Maple, Birch, Red Oak, White Oak, Cherry, Hickory, and Walnut.

› **Lumber Plank Match.** Eliminates the repetitive look of traditional book matched veneers. No more “Machine Gun” effect of knots, burls or mineral in rows. This allows the natural characteristics to enhance appearance without distraction.

› **Finishing.** Appalachian Traditions is 100% plank matched with tight side out. This will eliminate the “barber pole” effect that can accompany some book matched veneers. Eliminates shading due to alternating tight side and loose side flitches across the panel.

› **Shop Floor and Job Site.** No more presorting of panels, which eases bottlenecks on the shop floor, increases yields, enables quicker completion and better end results.

› **Solid Wood Look.** Plank matched to resemble solid lumber which blends with doors and face frames for overall pleasing appearance with no panels looking too light or too dark.

› **Cost Reduction.** Consistent finishing saves time and waste on the shop floor. Exchanging damaged doors in the field does not require a match. A replacement Appalachian Traditions door can be sent with confidence with regard to grain appearance.

› **Certified Forestry.** Appalachian Traditions panel constructions can be specified as FSC® certified. Purchasing products with an FSC label supports the growth of responsible forestry worldwide.

**traditions**™

Appalachian Traditions™ offers the popular lumber look, with plywood's great properties.

Each panel is plank matched, eliminating the repetitive characteristics found in book matched offerings and opening up new advantages in the shop and on the showroom floor. Each panel is unique and is available in 7 species: Maple, Birch, Red Oak, White Oak, Hickory, Cherry, and Walnut. Best of all, Appalachian Traditions is produced in all Columbia Forest Products' plywood mills allowing for regionalized shipping and service.

# Specify with confidence.

Architects, designers, cabinet and furniture makers looking for distinctive styles that range from bold to traditional, will appreciate the options in the Appalachian Traditions Collection. These panels are designed to blend harmoniously whether used as wall panels or smaller components, like doors. Because they are designed to be “consistently inconsistent,” the panels will never exhibit distracting repeats or imbalanced shading.

Each piece of veneer is unique and exhibits the natural characteristics of its species; accordingly, the actual veneer may not appear exactly like this printed reproduction.
