FOREST PRODUCTS

Drop your costs; not your looks!

Lose the time, material, equipment and productivity costs and hassles of finishing your own panels - and give your customers a beautifully tough surface that stands up to Covid-19 cleansers and disinfectants!

Columbia Forest Products' UV Wood panels feature a durable, clear, VOC-free epoxy acrylic coat that enhances the warmth and beauty of their hardwood veneers. This tough finish is ideal for cabinet interiors and exposed outer faces.

You'll appreciate the savings of pre-finished panels, which eliminate the need for spray coating time, material and equipment. And you'll provide your customers a real wood alternative to synthetic, printed interiors - an upgrade to standard boxes you can offer at a competitive price.

UV Wood resists scratches, chips and the effects of solvent wipe down. Plus, it's available in Ultra Low, Low, Satin, Medium, and High Gloss levels. You can order it on one or two sides, and on any core, grade and species combination.

It's perfect for kitchen cabinets, closets, furniture, fixtures, or anywhere a durable, and easy-to-care-for clear finish is desired.

For more information, please call one of the regional numbers listed or visit www.cfpwood.com.

Features & Benefits

- › Consistent & beautiful finish resists scratches and chips and stands up to disinfectants and other antimicrobial cleaners - even those with bleach.
- › New Ultra Low Gloss sheen option for today's more natural design preferences.
- › Advanced technology for a smoother, more beautiful appearance.
- › Real wood alternative to melamine or low basis weight paper interiors.
- › Easy to wipe off any overspray or other installation messes with solvents.
- › UV Wood panels are balanced and will stay flatter than a melamine one-side panel.
- › UV finished surface reduces VOC emissions.
- › Available on veneer core, MDF and particleboard cores in a variety of thicknesses, and any hardwood face and back combination, for numerous design options.
