

ColorShield

Introducing an **All-Inclusive option**

ARAUCOPLY ColorShield proves to be the best one-step solution for outdoor siding. Pressure treated against fungal decay and termites and immersed in rich UV-resistant hues, this product takes any project from ordinary to extraordinary.

Features

- Pressure treated against fungal decay and termites
- UV protection
- In-solution color pigment system, not a surface coating
- Certified for above ground installation
- Compatible with all types of fasteners and hardware, including aluminum
- Limited 5-year color warranty and lifetime structural warranty
- Fade resistant to hold color longer
- 100% wood

Complete Package

ARAUCOPLY ColorShield is a total package product. The backbone of this product comes from the strong performance and durability that ARAUCOPLY has been known for over 20 years. ARAUCOPLY ColorShield incorporates a pressure treatment for termite and fungal decay protection along with a beautiful cedar-like finish that is available in both red and brown hues for a product that is ready-to-install.

Protection Advantage

Building projects are in safe hands with **ARAUCOPLY ColorShield**. The micronized copper azole preservative used in the treatment process protects the product from termites and fungal decay giving

it lasting durability. Factory applied treatment ensures product consistency and a micronized iron oxide color pigment system provides the product with natural UV protection (the same principle used in exterior paints and stains).

The treatment compound is compatible with all types of fasteners and hardware, including aluminum, keeping accessories safe from added corrosion. ARAUCOPLY ColorShield is sustainably treated and FSC® MIX certified (FSC-110612) creating an environmentally-friendly product made to withstand the threats of the elements. With the added bonus of a structural and color warranty you can rest assured in the product quality.

Appearance

ARAUCOPLY ColorShield is shaded in red or brown cedar-like hues using an in-solution color treatment process. The color is not only applied to the surface, but it is completely permeated throughout the product creating a rich lasting color that deepens over time. ARAUCOPLY ColorShield products have been lab tested and shown to hold color longer than redwood and cedar. In order to maintain a consistent look in a project ARAUCOPLY ColorShield products are matched with other composite decking and railing products.

Availability

- Not into color? Treated products are also available in raw wood
