EVEREST WHITE

Unilin Evola is a high quality laminate and panel collection driven by design and inspired by architecture, nature and fashion.

Offering decors and textures using the newest technology so you neither see nor feel the difference between them and the authentic materials. The original designs and surface structures of Unilin Evola are developed and manufactured in Belgium.

100% Recovered Wood

Sustainability is at the core of Unilin's production. As a pioneer in industrial recycling, wood is used as a renewable raw material but only 100% recovered wood is used to produce new, high quality panels.

When wood is incinerated or rots, CO₂ is released into the atmosphere. We commit ourselves to keeping wood in circulation for as long as possible before we convert it into green energy ourselves. So by processing wood into high-quality panels, we save it from incineration and thus reduce CO₂ emissions. Only when wood can no longer be given life as a product, we will convert it into green energy and further reduce our CO₂ emissions in production.

You can find our wood everywhere

We use by-products from the timber industry and the city as our forest

We give wood second lease of life

100% recovered wood, thanks to a specialised production process

Wood as a source of energy

Non-salvageable wood generates green energy for our production
