Six Easy Steps to Create an Elegant Staircase

Step by Step Guide

Creating a staircase just the way you want it is easier than ever with Coffman Stair Parts. Whatever your personal style or type of home, you'll enjoy turning the stairway that you imagine into a beautiful creation. Our step-by-step process below will help guide you to a perfectly crafted staircase.

Have any questions? Our dedicated team of stair professionals are here to help. Contact us at **(800) 810-9204** or email us at **sales@wm-coffman.com** and also check us out at **www.wm-coffman.com**.

1. Choose an Over-the-Post or Post-to-Post System

Over-the-Post stairways incorporate a continuous handrail that is set atop the newels and balusters for the length of the stair run and allow for the use of a variety of decorative fittings.

Post-to-Post stairways feature a handrail that connects into an upper square block on the newel.

OVER-THE-POST

POST-TO-POST

2. Select Your Wood Species

Give your staircase a personal touch with beautiful wood. Consider selecting from our standard species that include Red Oak, White Oak, Poplar, Hard Maple, and Beech. Add a higher degree of distinction with virtually any custom wood species. We will craft virtually any style of stair in the exotic specie of your choice.

Contact us today for information at **sales@wm-coffman.com**.

RED OAK

WHITE OAK

POPLAR

HARD MAPLE

BEECH

MAHOGANY

3. Select Your Baluster Style

All wood balusters are either pin top or square top. Pin top balusters have turned, round tops that are inserted into holes drilled into an unplowed handrail (as well as Iron Balusters). Square top balusters have a turned portion, leaving a square upper and lower portion. Square top balusters require a plowed handrail and fillet.

PIN TOP

SQUARE TOP

4. Choose Your Collection

Our extensive Collections are created to fit your style and your home's interior setting. Their design possibilities are almost limitless. Find the look that works best for you. Choose the profile you like and combine it with your preference of Newel design.

5. Select Your Handrail

Most handrails are available either plowed or unplowed, as shown in the pictures, and are designed to correspond to your selection of baluster type.

PLOWED

UNPLOWED

6. Add Detail with Design Options

Enhance your staircase with a wealth of decorative design accessories. Our appealing array of starting steps, rosettes and tread brackets provides finishing touches to create a richly decorated stairway that you and your family will cherish. You will find many finely crafted options throughout this book to help you create your perfect stairway.

Each Box Newel Family has unique Cap and Trim designs. Ex: Removable Cap Style Box Newels have a different Cap and Trim as the Fixed Cap Style Box Newels, etc.

All Removable Cap Style Box Newels come with a Flat Cap and a Pyramid Cap to give more design options.

All 3-1/2" and 4-1/2" Box Newels have solid bases. All 6-1/4" and 7-1/2" Box Newels have a hollow base for easier installation (using the Coffman EZ Mount Installation Block).

Rail Fittings

The 2nd digit of the Fitting part number identifies the profile and must match the 2nd digit of the Rail part number.
 (Example: C-70XX Fittings = C-6010 Rail / C-72XX Fittings = C-6210 Rail.)

TRADITIONAL C-6010	BRISTOL C-6110	CLASSIC C-6210	GEORGIAN C-6310	RICHMOND C-6410
-----------------------	-------------------	-------------------	--------------------	--------------------

Starting Fittings should be used with Pintop Newels at the base of the staircase.

Starting Steps

All Coffman Starting Steps are shipped with the necessary cove and shoe moulding. Single Bullnose Steps are Reversible and can be trimmed to length.

C-8010
 Usable with all Standard Turnouts and Volutes
 Available in 48", 54", 60", and 72"

C-8015
 Usable with all Standard Turnouts and Volutes
 Available in 48", 54", and 60"

C-8030
 Usable for Post-to-Post systems and works well with Box Newels.
 Available in 48" and 60"

C-8016
 Usable with all Standard Turnouts and Volutes as well as adjustable sizes for exact finishing fit.
 Available in 48" (trim from 43" to 48"), 53" (trim from 48" to 53"), and 58" (trim from 53" to 58")

Coffman treads are manufactured under highly controlled standards for beauty that will last a lifetime. We only carry solid, American-made treads. Coffman Tread & Riser Caps are used with applications where carpeting would be placed along the center. These components allow for the look of quality hardwood on either side.

Stair Anatomy

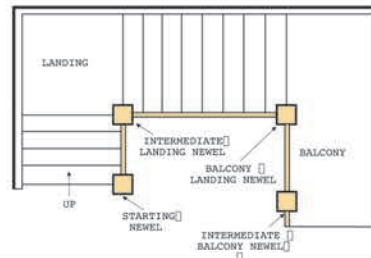

Ordering Specifications

Check local building codes for required height and baluster spacing.

NEWELS

Newels serve as the main structural support of the balustrade portion of the stair. Proper placement, coupled with proper installation techniques, is critical to a structurally sound and code compliant staircase. Newels should be placed at the top and bottom of every stair, at all directional changes, and at intervals of not more than 8' on level balcony runs.

POST-TO-POST NEWELS

PTP newels are designed with upper (top) square blocks that will receive the handrail. Standard block sizes (5", 10" and 13") are provided for use at various locations of the stair.

STARTING NEWELS

A 5" top block will always work at the beginning of the stair. Larger top blocks are unnecessary and can appear top-heavy.

INTERMEDIATE LANDING NEWELS

Intermediate landing newels will have angled rail entering and exiting the upper square block from adjacent sides. Because the newel is basically making up for two rise dimensions in the stair (*the last rise before the intermediate landing as well as the first rise of the second straight run*), a longer square block is necessary to keep consistent rake rail heights from the first run to the second. A newel with a minimum 13" top block will be required.

BALCONY LANDING NEWELS

Balcony newels will have angled rail entering from the lower side of the newel with level rail exiting from the top of the upper block. Because only one rise dimension is involved, a 10" top block will normally be required.

BALCONY INTERMEDIATE NEWELS

Balcony intermediate newels will have level rail entering and exiting the upper block of the newel. A 5" top block is recommended.

USE OF FITTINGS WITH PTP NEWELS

The use of easings and goosenecks in PTP systems make the need for longer square blocks unnecessary. Order a 5" top block newel at all locations.

Ordering Specifications

Check local building codes for required height and baluster spacing.

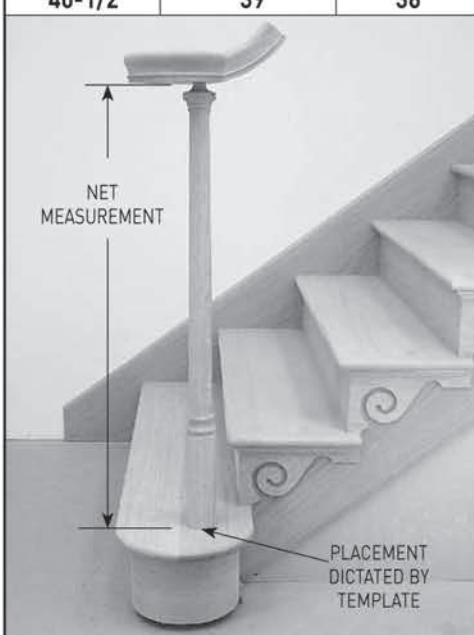

All Over-the-Post newels are manufactured with a 3/4" diameter pin turned into the top of the newel that will be installed into the underside of the fittings used in the rail system.

OVER-THE-POST NEWELS

Recommended heights for the following newel placements are based on a 34" rake rail height, a 7-1/2" rise, a 10" run, and a 1-1/4" tread overhang and are dependent on the location of the newel matching the standard location listed with the application. Variances of up to 3/4" can be expected in certain conditions and should be accounted for when trying to achieve minimum code heights.

OTP STARTING NEWEL HEIGHTS (For 34" Rake Rail Height)

			
STARTING EASING	TURNOUT	VOLUTE	
Net Measurement 36-1/2"	Net Measurement 40-1/2"	Net Measurement 39"	36"

		
NET MEASUREMENT	NET MEASUREMENT	MEASUREMENT: TOP OF TREAD TO TOP OF NEWEL
NEWEL CENTERED ON RISER	PLACEMENT DICTATED BY TEMPLATE	NEWEL CENTERED ON RISER

OTP newels are manufactured in both doweled bottom and square bottom designs. Doweled bottom newels have a 1-1/2" diameter dowel designed into the bottom of the newel that is used to install the starting newel into a starting step. The height of these newels cannot be adjusted, making correct specification critical in achieving desired rake rail height.

ADJUSTABLE NEWELS

An option available in all WM Coffman families to the fixed length doweled newels is the adjustable newel. These newels have a 1-1/2" diameter by 10" deep hole bored into the bottom of the newel and are shipped with a loose 19" dowel in the carton. These newels allow the installer to trim the newel (up to 4") to achieve exact rake rail heights over a wide variety of applications.

NOTE: Rake rail height requirements other than 34" can be adjusted on a 1:1 basis. Example: For a 36" rake rail height, add 2" to the base number. For a 30" rake rail height, subtract 4". Check local building codes.

NOTE: 1" movement in the newel from standard placement will change the rail height by approximately 3/4". Moving newel placement away from the second riser raises the rail height and moving it closer to the second riser will lower the rail height.

Check local building codes for required height and baluster spacing.

All balusters fall into one of the following categories:

PIN TOP - Pin top balusters have turned, round tops that will be inserted into holes drilled into unplowed handrail.

SQUARE TOP - Square top balusters have a turned portion, leaving a square upper and lower portion. Installation of square top balusters will require a plowed handrail.

FORGED IRON PIN TOP - Forged baluster pin tops are 1/2" diameter.

The stair's rake and balcony rail height, along with code considerations on baluster spacing, will determine the length and quantity of balusters required on any given job. **The tables below** list the quantity and length of the balusters necessary for each rake application for a 34" rake rail height.

All baluster pins are 3/4" long by 3/4" diameter and are turned with chamfered bottoms and a centered glue ring.
Exception: 5015H, 5610H pins are 5/8" long by 5/8" diameter.

Top diameter on the pin top balusters will vary according to baluster size.

- 1-1/4" Baluster - 5/8" diameter
- 1-5/8" Baluster - 5/8" diameter
- 1-3/4" Baluster - 3/4" diameter
(except C-5611 which is 5/8")
- 1-9/16" Baluster - 3/4" diameter
- Forged - 1/2" diameter

All pin top balusters have a guaranteed 3" minimum top straight portion for trimming and insertion.

BALUSTER QUANTITY AND LENGTH (For 34" Rake Rail Height)

			
STARTING EASING	TURNOUT	VOLUTE	VERTICAL VOLUTE
BALUSTERS UNDER STARTING FITTINGS			
QUANTITY - 1	QUANTITY - 2 C-7240, C-7245	QUANTITY - 6 1-1/4" SQUARE	QUANTITY - 1
	QUANTITY - 1 C-7241, C-7246	QUANTITY - 5 1-3/4" SQUARE	
LENGTH 39"	LENGTH 43"	LENGTH 41"	LENGTH 39"

BALUSTERS ON TREADS

Adjustments to rake rail heights from 34" can be accommodated on a 1:1 basis. Examples: For a 36" rail height, simply add 2" to the given length and order the nearest baluster length (*rounding up if necessary*). For a 30" rake rail height, subtract 4" from the given length and order the nearest baluster length (*rounding up if necessary*).

NOTE: 44" balusters are available in all square bottom profiles.

BALCONY BALUSTER LENGTH

Baluster length requirements for the balcony will match the balcony rail height. If an exact baluster length is not available, simply round up to the next available length. *(Example: For a 38" balcony rail height, order a 39" baluster.)*

BALCONY BALUSTER QUANTITY

	
1-1/4" BALUSTER SQUARE	1-3/4" BALUSTER SQUARE
4-1/2"	4-5/8"
Exception: For 1-3/4" Pin Top Baluster with 5/8" diameter tops (i.e. C-5611) use:	
4-1/2"	

MAXIMUM CENTER-TO-CENTER SPACING (Under 4" Sphere Rule)

Spacing codes vary but generally fall under the 4" sphere rule. The dimensions listed are recommended center-to-center spacing measurements that will safely comply with this code.

To obtain the quantity of balusters for individual balcony runs, divide the length of the balcony run by the corresponding center-to-center spacing and round down.

Ordering Specifications

Check local building codes for required height and baluster spacing.

RAIL AND LINEAL BALUSTRADE COMPONENTS

Rail and lineal balustrade components, like other lineal products, are offered in even lengths from 4' to 16'. For rake portions of the stair, measure along the slope of the stair or use the lineal formula:

Number of Treads x 13" (rounded up to the nearest even length).

PLOWED RAIL is moulded with a recessed bottom for insertion of square top balusters.

UNPLOWED RAIL has a flat bottom that will be drilled for the insertion of pin top balusters.

LINEAL RAIL COMPONENTS consist of sub rail, shoe rail, and fillet. Shoe rail is a plowed moulding designed to accept the bottom of the baluster. Sub rail is used under unplowed handrail with square top balusters in Post-to-Post systems to provide a more substantial look to the balustrade. Fillet is a finished moulding that will be installed between the balusters in plowed rail, shoe rail and sub rail.

BENDING RAIL BALUSTRADE COMPONENTS

The key components of curved rail construction are bending rails and bending moulds. Bending rail is most easily understood when imagining a standard rail profile cut into thin, vertical strips. Bending mould is a form, moulded to the outside profile of the handrail, that is used to cradle the bending rail as it is being shaped to the stair.

Each ply comprising the bending rail is designed and manufactured with a tongue and groove bead to create an alignment of the plies. When assembled, WM Coffman bending rail results in a match of the standard rail profile.

The minimum radius achievable with each rail profile will depend on several factors. These factors include such variables as the thickness of each ply, the overall thickness of the handrail, the height of the handrail, the angle of the stair, and whether the rail is bent on the rake or on the level portion of the stair. The minimum recommended radius for use on both rake and level applications are listed in the chart for each Coffman bending rail profile.

RAIL ITEM	BENDING RAIL MINIMUM RADIUS	
	RAKE RAIL	BALCONY RAIL
TRADITIONAL C-6016	42"	48"
BRISTOL C-6116	48"	54"
CLASSIC C-6216	48"	54"
RICHMOND C-6416	48"	54"

Check local building codes for required height and baluster spacing.

FITTINGS

Fittings, components used within rail systems, can be incorporated into both PTP and OTP stairs. In OTP rail systems, fittings are required to start the rail system, to make directional and height transitions, to carry the rail over intermediate balcony newels, and to terminate the rail when using a half newel. A good check of any Over-the-Post parts list is to make certain that a fitting is ordered for each newel, including half newels, in the stair. **NOTE:** WM Coffman fittings are shipped with all necessary rail bolts, 1" tapered rail plugs, templates, and full instructions to provide a quick, accurate, and professional installation.

FITTING DEFINITIONS

FITTING ORIENTATION

Fitting orientation is determined from the bottom of the stair looking up. All fittings in the photo to the right are right-hand.

GOOSENECK FITTINGS

Gooseneck fittings are used to accommodate transitions in height and/or direction at intermediate and balcony landings.

NOTE: It is recommended that a minimum difference of 4" between rake rail height and balcony rail height be kept on all Over-the-Post systems.

CAP VS. NO CAP

All fittings fall into two categories: (1) those designed and manufactured with a cap and (2) those manufactured without a cap.

All fittings with caps have a 3/4" diameter hole bored in the under side of the cap to receive the top pin of the Over-the-Post newel. Fittings without caps are designed to carry the baluster line through a transition without the use of a newel. Capped fittings are clearly identified in both the drawings and product descriptions.

ONE-RISE VS. TWO-RISE

Most goosenecks are offered in both one-rise and two-rise versions. The one-rise gooseneck is manufactured with the lower easing attached and is limited to use on stairs where the difference in rake rail height to balcony rail height is 4" (Example: 34" rake rail height to 38" balcony rail height). The corresponding two-rise gooseneck makes the same height and/or directional change as its one-rise counterpart but is shipped with the lower easing unattached. This versatile two-piece design allows the installer to trim or extend the straight section of the gooseneck to a height that will work in any situation. Two-rise goosenecks work in applications where the difference in rake rail height is less than 4" (Example: 34-1/2" to 38"), greater than 4" (Example: 34" to 42"), or unknown at the time of ordering.

Ordering Specifications

Check local building codes for required height and baluster spacing.

SUGGESTED GOOSENECKS FOR SOME COMMON APPLICATIONS

See Page [10](#) for Guide to ordering Gooseneck Fittings

SPECIALTY FITTINGS

OVER EASING

An over easing is designed to carry the rail system from the rake (angled) portion of the stair to the level, balcony portion without the use of a gooseneck. This elegant, flowing look is achieved by combining the over easing with a transitional fitting such as a tandem cap.

COPED ENDS

Some WM Coffman families contain a Coped End which is a fitting that has the profile of the rail shaped, or coped, into one end of a straight piece of rail. This fitting is used in conjunction with an opening cap (Example C-7019) or a gooseneck incorporating an opening cap (Example C-7097), to accommodate nonstandard angle changes.

90° UP EASING

90° up easings are used to make a horizontal to vertical 90° transition in a rail system.

COMBINING FITTINGS

Standard fittings will sometimes have to be site-assembled to complete a height and/or directional transition. Basically all stair applications can be satisfied using a combination of currently available WM Coffman fittings.

In the example shown of a 180° turn at balcony, you will need a two-rise gooseneck with cap that turns right 90° to sit on top of the newel along with a level quarterturn without a cap to complete the 180° turn.

S-SERIES FITTINGS

WM Coffman's S-Series fittings accommodate the continuous rail codes on partial-open stairs. Specify Right-Hand or Left-Hand (from the bottom of the stair looking up).

ASCENDING VOLUTES

WM Coffman's ascending volutes (C-7X33, C-7X38) are designed to begin their ascent much sooner than their standard counterparts, allowing for the use of a shorter newel and shorter balusters on top of the bullnose starting step. This lower, more proportional beginning of an Over-the-Post system, coupled with the graceful, flowing transition from the volute to the rail, makes the ascending volute an attractive addition to any stair.
