The CookTek® Incogneeto™ is an under-counter buffet warmer designed to mount under natural stone or “engineered” stone countertops – no cutting of the stone is required. The Magneeto™ trivet (one included with purchase) is placed on the countertop and acts as a temperature sensor, communicator, and locator device which allows the efficient heating of any induction-compatible pan through the stone countertop.\*

### FEATURES:

- Under counter design with a polycarbonate top and aluminium housing
- Includes Magneeto™ 2 wireless receiver - a trivet-like device used on the countertop to locate the heat zone
- Standard selectable temperature settings: 65°C / 70°C / 75°C / 80°C / 85°C, with lower temperature selections via the keypad
- Accommodates up to a 305mm induction-compatible enamel cast ironware or traditional chafer
- Can be safely used under natural stone, or engineered ‘stone’ countertops
- Automatic pan detection allows for instant energy transmission to pan; almost no energy consumption when pan is not present
- Lock feature prevents unwanted setting changes
- Large range of accessories available, please contact your Stoddart professional for additional information
- **It is important that there is adequate ventilation and clearance in the cabinetry housing the Incogneeto units. Follow the below link for installation guidelines or contact Stoddart on (07) 3440 7600**
