

MAJOR PROJECT

ADELAIDE TRAM EXTENSION

Stoddart Infrastructure worked in partnership with Coleman Rail, and the South Australian Government and their design team to deliver five 20m walkway shelters along the new tram extension in William Street, Adelaide.

The walkway shelters have been developed to reflect Adelaide's commitment to environmental sustainability and its recent designation as a 'Solar City' with the roof structure created with modular solar panels integrated into the glass panel. The central beam houses the solar powered lighting as well as signage and acts as a visual anchor for the cantilevered roof struts, all of which serve to provide a comfortable environment for users.

In June 2008, this project was awarded the 2008 Adelaide Prize presented by the Lord Mayor.
