

Follow-on formula from six months

BabySemp 2

BabySemp 2 Lemolac

BabySemp 2 SensiPro

PREPARATION

1 In a microwave: Measure the cold water in the baby bottle and add the correct number of level measures of powder.

2 Close the bottle and shake/mix until the powder is dissolved.

3 Heat without the lid on at full power for around 40 seconds.

4 Check that the mixture is not too hot by dropping a small amount on the inside of your wrist. Taste it yourself before giving it to your child.

5 Serve freshly prepared. Do not save any leftovers.

6 In a pan: Whisk together the correct amount of powder and cold water in a pan and heat to eating temperature.

DOSAGE

It is important to use the correct powder dosage in relation to the amount of water. Too much powder can cause constipation. Too little powder can result in your child having insufficient energy and nutrition.

Water	Powder	Portion amount
60 ml	2 measures	65 ml
90 ml	3 measures	100 ml
120 ml	4 measures	135 ml
150 ml	5 measures	165 ml
180 ml	6 measures	200 ml
210 ml	7 measures	235 ml
240 ml	8 measures	265 ml

Scoop size 8.6 ml = 4.7 g. Always use the scoop provided with level measures.

HOW BIG A PORTION?

The amounts in the table are approximate as different children consume different amounts. Your child will regulate their own intake according to their needs and their intake of regular food. Consequently, the table should be used only as guidance.

Child's age	No. of meals per day	Water	Powder	Portion amount
6–8 months	1–3	210 ml	7 measures	235 ml
	1–4	180 ml	6 measures	200 ml
> 8 months	1–3	210 ml	7 measures	235 ml
	1–3	180 ml	6 measures	200 ml

BEST BEFORE

The best-before date is stated on the top of the pack. An opened pack should be consumed within one month.

STORAGE

Store in a dry dark place at normal room temperature. Always store the powder in its original packaging. There is smart storage for the scoop in the lid.

Research and development in consultation with paediatricians

BabySemp 2/BabySemp 2 Lemolac/BabySemp 2 SensiPro contain a carefully selected blend of milk fat and vegetable oils. Young children may find it difficult to form sufficient quantities of the long-chain fatty acids omega-3 (DHA) and omega-6 (ARA) themselves. Consequently, these are contained in all BabySemp 2 products, alongside nucleotides and GOS (galacto-oligosaccharides/fibre). Iron contributes to normal cognitive development and understanding in children. Vitamin D is essential for the growth and normal development of bone structure, while iodine contributes to normal growth. Consequently, BabySemp 2/BabySemp 2 Lemolac/BabySemp 2 SensiPro are enriched with iron, vitamin D, and iodine.
