## Summary

I am passionate about node.js, elixir, functional programming and the future of the web. In my spare time I [speak at conferences](#), judge hackathons and take online courses on udacity.

## TECHNICAL SKILLS

Javascript, Node, Express, Socket.io, Phoenix/Elixir, Postgresql, Reactjs.

## Previous Experience

**Gigster** : Software Engineer - contractor 2016 - present

- Refactored and maintained the core website.
- Built <https://www.savvyamigo.com/> from the ground up in phoenix framework

**Onelogin** : Software Engineer 2015 - 2016

- Architected and built the ldap microservice than powers [Onelogin Desktop](#).
- Wrote unit tests to ensure reliability of our core rails application.
- Mentored junior js engineers on best practices in nodejs

**Sysomos** : Senior Frontend Engineer 2014 - 2015

- Completed extensive refactors on an upcoming product.
- built custom angular directives for expanding the functionality of the core suite.

**Keychain Logistics** : Lead Server Engineer 2013 - 2014

- Created the ability to track and manage the movement of trucks across the country in realtime using postgresql.
- Built a massive distributed message queue powered data processing pipeline in to horizontally scale and manage insertion of loads into the database.
- Built the login and authorization system.

**Smartshoot** : Frontend Engineer 2013

- Rewrote the request for proposal page as a single page app using backbone and handlebars.js.
- Refactored extensive parts of the codebase to use modular javascript.

## Education

**University of Massachusetts Amherst** 2010

**Hack Reactor Software Engineering School** 2013

## Open-Source Projects

- Shen (<https://github.com/cultofmetatron/shen>)
  - One of the first libraries to facilitate functional composition with generators.
- jQuery-autobars (<https://github.com/cultofmetatron/jquery-autobars>)
