TAILORED SOLUTIONS ORDERING INFORMATION

PRODUCT MODIFICATIONS

Modifications include structural and dimensional modifications to existing product and Dual Fabric Applications, when standard model is not available.

The HON Company, at its own discretion, may modify standard products to meet specific needs. Product specials can be requested on HON brand product only.

List prices contained in published list pricers are for standard catalog items only. Changes or alterations to catalog items other than those listed as catalog options are subject to additional charges. Pricing will only be furnished upon approval of the special request.

Requests to have the product produced in more than one fabric (e.g., fabric on the seat is different than the fabric on the back), are considered a Dual Fabric Applications request and follow the Product Modification request process within the Community.

SPECIAL LAMINATES

Special laminates include requests for laminates not available as part of The HON Company's standard offering. Requests for special laminates are subject to manufacturing approval and minimum order quantities. The HON Company approved special laminates will be subject to a designated upcharge per unit.

Requests for special laminates should be submitted through the Community. Pricing will only be furnished upon approval of the special request.

SPECIAL PAINTS

- The HON Company's paint matching equipment can match almost any color, excluding some metallic and whites.
- Special paint requests must be submitted on the Community.
- In order to request a paint sample, the customer must have a minimum order of 10 like product units. Any requests with less than that amount will not be processed.
  - For each new paint request, there will be a $250 net charge. A sample of the exact color desired is required for matching and approval. The HON Company will match the color and provide a production sample for the customer to review and approve.
- Once written approval is received by The HON Company, the request will be approved.
- Each unique color or finish combination incurs a designated upcharge per color per order (all standard discounts/competitive project pricing applies).

Special note: Some special colors could fall outside of this program due to production costs or not meeting The HON Company's quality standards. The HON Company may apply additional charges to some colors which are costly to apply, and refuse some orders on colors that cannot meet The HON Company's high-quality standards. The HON Company will notify the customer upon completion of The HON Company's evaluation if a change in price is required or rejection of the order.

DISCONTINUED PRODUCT

Requests for discontinued product require engineering evaluation, safety review, and testing to current standards prior to approval. Many discontinued products are not available for order. Requests for discontinued products should be submitted through the Community.

LEAD TIMES FOR SPECIALS PRODUCT

Lead times on orders containing specials are subject to production capacity and material availability. When possible, the customer should order special products separately to avoid extended lead times for standard products. Extended lead times will be noted on Compass.

CHANGES TO SPECIALS PRODUCT

A special model will be provided for each approved special item to process orders. Once an order is placed, no changes or cancellations can be made to the order without approval from Tailored Solutions.

CUSTOMER WARRANTY EXCLUSION

The HON Company shall have no responsibility for the condition, quality, value, performance, physical properties, or any other aspects of the COM.

The HON Company shall have no liability for any damages, injuries, or losses to the customer or to any third party that shall be caused by any COM or product modification, and the customer shall hold The HON Company harmless for all liability.

The HON Company assumes no responsibility for the overall appearance, flammability, normal durability, colorfastness, or any other quality of the COM or product modification after its application on a HON product beyond normal quality standards. The HON Company reserves the right to reject a COM fabric if the quality of the COM is not satisfactory for the product. Should this occur, the customer will be notified with an explanation of the issue.

The HON Company is not responsible for fabric that has become obsolete at the COM supplier, that is of poor quality, or that is delivered late to The HON Company from the COM supplier. The HON Company is not responsible for excess yardage created by DTS orders or yardage not attached to an order and reserves the right to dispose of the excess fabric.

As a standard HON does not pattern match any standard, partnership or COM fabric, therefore pattern match is not applicable under warranty. If pattern match is needed please submit a Tailored Solutions request or contact HON Customer Support/Tailored Solutions once your COM has been approved.

COM TESTING

As a result of recent legal requirements, The HON Company will need to obtain specific information from the fabric supplier about treatments and chemicals used in the fabric. To the extent the supplier is unwilling or unable to provide the necessary information, which could extend the testing lead time of the request.

To check if a COM has been tested previously, utilize the COM Search Tool on the Website > Design Resources > Textiles & Finishes section using the following information:

- COM Supplier's Name
- Fabric Pattern Name
- Color Name
- If the COM fabric has been tested and previously approved, the COM will not need to be re-tested unless testing standards have changed, fabric is to be used on a different series, or direction of the fabric has changed from what was previously approved. Please note that Panel product must be approved for each model and color.
- If the pattern has previously been tested and approved, but not in the specific requested color, the customer will need to request an order code for that color only. No further testing will be necessary since the pattern has already been approved.

If the fabric has not previously been tested, the customer must enter the COM request on the Website > Textiles & Finishes > COM Search Tool.

Complete the Supplier Name, Pattern, and Color drop-down fields. For quicker results in these fields, type the first letter of the (supplier, pattern, color) name and, when done, click Add and then Submit. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.)

An email will be sent to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: submitted, in testing, testing materials requested, and final approval/denial with price grade and fabric code. The testing process takes approximately 48 hours.

COM yardage in the pricer is shown as pattern cut only.

COM TESTING — FLAMMABILITY TESTING INFORMATION

The customer is responsible for ensuring that the COM fabric is certified to meet all flame-retardant requirements. All COM seating fabric must, at minimum, meet CAL 117 requirements. If the customer requires the chair be tested to meet the fire safety standards of CAL 133, additional testing and information is required.

MTS COM

As previously mentioned, MTS is the primary COM method.

If the COM fabric has not been tested, a COM request must be submitted on the Website.

For MTS orders, The HON Company will procure fabric needed for production. Should The HON Company not be able to obtain fabric yardage, the customer will be contacted.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

CUSTOMER'S OWN MATERIAL ORDERING INFORMATION

When testing has been completed, the customer will be notified by the COM team of the test results. If the COM is approved, The HON Company will provide a COM tracking order code for MTS. That tracking code is required on the order in place of the standard fabric code.

If approved, MTS product will be assigned an appropriate fabric grade for pricing. The pricing can be found on the Website > Design Resources > Textiles & Finishes. (All standard discounts/competitive project pricing applies).

Written COM price quotes are valid for 90 days after the issue date.

DTS COM

DTS COM is only available if the COM fabric cannot be procured by The HON Company. If the fabric can be procured by The HON Company, the customer will be contacted to switch to MTS or cancel the request.

If your fabric is not listed as approved, and it is not a Partnership fabric you may request a "Dealer to Supply" code. Select the "Request COM Test" link on the COM Search website. Complete the Supplier Name, Pattern, and Color drop-down fields. For quicker results in these fields, type the first letter of the (supplier, pattern, color) name and, when done, click Add and then Submit. (Multiple series can be added to the same request if they are the same supplier, pattern, and color.)

An email will be sent to the requestor stating the COM Request was successfully submitted. Up to four emails could be received: submitted, in testing, testing materials requested, and final approval/denial with price grade and fabric code. It's rare actual test yardage is required. Testing is mainly done by reviewing the attributes of the fabric. The testing process takes approximately 48 hours.

If the COM has not been tested, a COM request must be submitted on the Website > Design Resources > Textiles & Finishes.

When testing has been completed, the customer will be notified by the COM team of the test results. If the COM is approved, The HON Company will provide a COM tracking order code. That tracking code is required on the order in the place of the standard fabric code.

DTS product is priced at the following grades (all standard discounts/competitive project pricing applies):

- Chairs are a Grade 4
- Panel product is a Grade D

Written COM price quotes are valid for 90 days after the issue date.

COM LEAD TIME

Ship dates will be based on fabric receipt and The HON Company's standard lead time. All fabric must be properly tagged and shipped to the appropriate producing location (provided in the approval email).

- Specific to DTS orders, COM orders will not receive a ship (acknowledged) date until The HON Company has the fabric in its possession for production.
- Specific to DTS orders, the customer may send the required yardage for the order to the address listed on the approval email to arrive no sooner than 4 weeks in advance of the acknowledgment date.

HON will make every effort to locate mis-directed COM shipments on behalf of the customer. However, The HON Company will not be responsible for any COM received without a tracking number or incorrectly shipped by the fabric vendor to an incorrect producing facility.

COM ORDERING INFORMATION

The following information must appear on or accompany the product purchase order:

- Approval tracking number and the customer's purchase order number
- COM supplier, pattern, and color name/number

The packing list for the COM must include the following information when The HON Company receives the shipment for production:

- Dealer or Wholesaler Name
- Purchase order number submitted to The HON Company
- Fabric name
- Yardage shipped
- Approval ordering code

Specific to DTS orders; the customer should send only the amount needed for the order. Excess yardage or yardage not tied to an order will be disposed of at The HON Company.

CHANGES TO COM PRODUCT

Once a COM product is ordered, no changes or cancellations can be made to the COM product without approval from the HON COM team.

HON BRANDED, PARTNERSHIP AND COM PATTERN MATCH

- Pattern matching provides alignment of patterns or stripes across individual chair surfaces. Additional yardage may be required depending on pattern repeat. If Pattern Match is needed, please contact HON Customer Support/Tailored Solutions.
- Chair to Chair Pattern Match provides identical pattern alignment from unit to unit and is available with an upcharge. Chair to Chair Pattern Match is reviewed on a case by case basis as several factors are reviewed to determine additional yardage required, including repeat and pattern direction. If Chair to Chair Pattern Match is needed, please contact HON Customer Support/Tailored Solutions.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

PAINT PROGRAM

The HON Company has established paint grades to allow customers flexibility and ease in doing business with HON. HON has three paint grades P1, P2, and P3.

P1 PAINT COLORS

HON has established P1 paints which are available on a majority of core products.

P2 PAINT COLORS

Please see individual pricer pages for eligible series and upcharges for P2 paints. P2 paints are listed in the pricer pages under the column P2. Upcharges vary by product (all standard discounts/competitive project pricing applies). No minimum quantity required.

P3 PAINT COLORS

Please see individual pricer pages for eligible series and upcharges for P3 paints. P3 paints are listed in the pricer pages under the column P3. Upcharges vary by product (all standard discounts/competitive project pricing applies). No minimum quantity required.

SPECIAL PAINT COLORS (P4-P6)

With The HON Company's state of the art color matching equipment just about any color can be matched, excluding some metallic and whites. A sample of the exact color desired is required for matching and approval.

- For each newly requested paint, a net fee of $250 will be charged to cover costs associated with the matching process.
- For existing, previously matched paints, there is no matching fee, however there is a $100 net fee for sample panels required for the approval process. Refer to MyProjects on the HON Portal for a list of approved special paints.

For all special paint requests, HON will send a production sample for the customer to review and approve. Once the signed paint sample is received at HON the order can be entered. Upcharges vary by product (all standard discounts/competitive project pricing applies). A quantity of 10 like-model minimum order is required for special paints. For complete program details, access Tailored Solutions on the Website at hon.com.

Some special colors could fall outside of this program due to production costs or not meeting HON quality standards. The HON Company may apply additional charges to some colors which are costly to apply, and deny some orders on colors that cannot meet our high-quality standards. We will notify the customer upon completion of our evaluation if a change in price is required or if the request is denied.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ENVIRONMENTAL STATEMENT

We continually reevaluate our purpose and processes, from fostering transparency and circularity in our supply chain to empowering our members to do and be better. We do it so the environments you create will be safer, more socially responsible, and more sustainable.

We've pursued product certifications to help communicate our commitment to developing sustainable products.

Clearing the air.

In 2006, The HON Company became one of the first office furniture manufacturer to have products certified under the Indoor Advantage™ program. Virtually all manufactured products emit chemical compounds into the air. Indoor Advantage™ certification helps assure customers that certified products will help improve the air quality within their offices and workspaces.

Developed by SCS Global Services, Indoor Advantage™ evaluates products against indoor air quality standards, like ANSI/BIFMA Furniture Emissions Standard, M7.1/X7.1 and CDPH Standard Method v1.1. The ANSI/BIFMA X7.1 standard allows manufacturers to test individual components, as well as complete products for emissions from volatile organic compounds (VOCs). This allows us to identify problematic materials and phase them out of our products.

Indoor Advantage™ certified products meet the LEED and WELL criteria for low-emitting materials.

Indoor Advantage™ offers two levels of certification, including Indoor Advantage™ and Indoor Advantage™ Gold.

On the LEVEL®.

LEVEL®, the certification program for the BIFMA e3 Sustainability Standard, was developed in response to increasing demand for proof that manufacturers were living up to their environmental claims. LEVEL® is a multi-attribute sustainability certification label for products that have met criteria in four categories of impact: Materials, Energy and Atmosphere, Human and Ecosystem Health, and Social Responsibility.

HON's products are certified to LEVEL 2 and LEVEL 3, the highest achievement. BIFMA LEVEL 2 and LEVEL 3 certified products can contribute to LEED and WELL projects.

Evaluating Our Impacts.

HON has begun studying the impacts our products have on the environment through lifecycle assessments and creating Environmental Product Declarations (EPDs). EPDs provide an understandable report of a product's environmental impact throughout its life cycle; including raw material extraction and processing, product assembly, distribution and use, and end-of-life.

Products that meet these specifications are identified throughout this publication with the following icons:

Certified SCS Indoor Advantage™	LEVEL® certified to the BIFMA e3 Sustainability Standard	Environmental Product Declarations

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

- For tri-oval and beaded edge options on tops with horizontal grain, there is a shaped profile on the user and approach sides, and a flat edge on the ends.
- For tri-oval and beaded edge options on tops with vertical grain, there is a shaped profile on the user side and a flat edge on the approach side and the ends.
- Grommets are an option and require specification. If grommets are selected, grommets come in a pre-determined location.
- Must be specified with support components; for pedestal, end panel, column, and leg options, see “Components — Supports” listings.

SUPPORTS

- For use with rectangle, bow, bullet, and extended corner worksurfaces.

CONCINNITY™ COMPONENTS — SUPPORTS

SUPPORT STORAGE PEDESTALS — 28½″H

- Non-handed, interchangeable design reconfigures easily.
- For use with component top and modesty/back panels or pedestal top and back panels.
  - Pedestals are not fully enclosed and require a component top/worksurface and modesty/back panel or a pedestal back, both of which must be ordered separately.
  - Pedestal's front and side panels are finished.
- The pedestal depth dimension is less than the like-size depth of the component top, to accommodate addition of a modesty/back panel.
  - 29⅛″D pedestals can be used under 30″ or 36″D worksurfaces; 23⅛″D pedestals can be used under 24″ or 30″D worksurfaces.
  - When specifying a 29⅛″D pedestal with ¾″ modesty panel under a 36″D worksurface, or a 23⅛″D pedestal with a ¾″ modesty panel under a 30″D worksurface, there will be a 6″ approach side overhang.
- Bottom of side panels are edgebanded for added strength and to seal out moisture.
- Drawers:
  - Operate on steel ball-bearing suspensions to ensure smooth, quiet, long-lasting operation; full extension allows easy access to contents.
  - Fronts are edgebanded on all four sides.
  - Feature 5-sided construction for added strength and easy alignment or replacement of drawer fronts.
- Interchangeable core removable locks are located on front of all modular storage products, except the storage cabinet.
- Finish of lock is determined by, and aligned with, the handle finish specified.
- Locks feature a removable cylinder that can be interchanged as needed; allows users to access all furniture pieces in an office with a single key for convenience and security. Makes re-keying quick and easy. Keyed alike cores must be ordered separately by specification of the key number (removable lock core kit models available in Black [model HF23B] or Satin [model HF23S]).
- Ship fully assembled.
- Chassis and drawer front colors are specified separately; can be selected with common woodgrain or solid laminate color, or with different, complementary chassis and drawer/door colors.
- See chart on page 50 for cord management options. If the pedestal grommet option is chosen, two cutouts, one per end/side panel, each with a black plastic cap, are included.

SUPPORT STORAGE PEDESTALS — 41″H STANDING-HEIGHT

- Same as above except — not to be used freestanding; top and back are not enclosed.
  - Rear of pedestal can be enclosed with a full, 40⅜″H back panel or with a 27⅞″H modesty panel combined with a lower, 13″H pedestal back component. Pedestal back and modesty panel must be ordered separately.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

NOTES: See chart on page 50 for cord management options.

❗ When grommets are specified for 30″D and 36″D rectangle worksurfaces, pre-drilled holes will not be included for a 4½″ diameter support column.

NOTES:

- Grain direction on all rectangle worksurfaces runs horizontal (side-to-side) except as follows: 30″W - 36″W - 42″W - 48″W - 54″W - 60″W x 24″D tops can be specified with horizontal (side-to-side) or vertical (front-to-back) grain.
- 42″W and 48″W x 20″D tops are available with vertical (front-to-back) grain only.
- For standing-height requirements, use worksurface with 41″H O-leg, end panel, L-shaped end panel, or pedestal supports.
- For mobile desks and tables, use post leg with casters.
- Rectangular surfaces are not designed to work with Laminate T-Shaped End Panels.

❗ If using worksurfaces with Coordinate™ Height Adjustable Bases, an External Stiffener must be used.

❗ Attachment of above privacy screen models requires a minimum 1″ clear space/overhang on the underside of worksurface.

❗ Worksurfaces used with Coordinate™ Height Adjustable Bases should have 1″ perimeter gap on each side to provide clearance between other furniture. Failure to do so risks injury or product damage (not covered by warranty).

❗ When using end panels or O-legs with 84″, 90″, or 96″W worksurfaces, interior weight-bearing support components are required to minimize worksurface deflection.

❗ Attachment of above/below privacy screen models requires a minimum 2″ clear space/overhang on the underside of the worksurface.

❗ Steel external support channel can be attached to the underside of worksurfaces that are subjected to heavier loads. Channel is recommended to provide extra support on unsupported spans of 54″W or greater or per user preference. Ordered separately from worksurface.

❗ If using a 54″W or 60″W floating modesty panel, an external stiffener is required.

❗ When using an external support channel under the worksurface, the depth clearance for center drawers and keyboard platforms decreases by 8″.

❗ See “External Channel (Recommended Use)” chart on page 45.

NOTES: Can be used in a host of applications, including as a desk, credenza, return, bridge, stationary or mobile table surface, in U- or L-shaped configurations, as part of a work wall layout with an island extension, or with the height adjustable electric base. The conference overhang dimension on the approach side of worksurfaces varies depending on the supports and modesty panels specified. Top can be positioned with a cantilevered conference overhang on one end when used with select worksurface supports, including an O-leg or 9½″W modular pedestal. For return applications in which there is an unsupported span wider than 54″, such as a 72″W x 24″D worksurface supported by a 15¾″W modular pedestal (= 56¼″) or a 60″W x 24″D worksurface supported by a 1⅛″ thick end panel (= 58⅞″), use internal support panel model HNL11SUPP. For bridges wider than 54″, use internal support panel HNL11SUPP. When using a 30″W, 36″W, 42″W, or 48″W rectangle worksurface as a bridge, no support legs are needed. When specifying a 84″W, 90″W, or 96″W worksurface, cannot use two O-legs for the supports. In these applications, the maximum number of supports that can be an O-leg is one; must choose from a 15¾″ or wider modular pedestal for use as the additional support component. For applications requiring connection to an adjoining worksurface, two flat brackets are included with 24″D and 20″D worksurfaces that are ≤48″W; one flat bracket is included with 24″D worksurfaces that are ≥54″W. Underside of worksurface includes pilot mounting holes for O-leg, 1⅛″ thick laminate end panel, pedestals, and flat brackets. See chart on page 50 for cord management options.

When grommets are specified for 30″D and 36″D rectangle worksurfaces, pre-drilled holes will not be included for attachment of a 4½″ diameter support column.

NOTES:

- Grain direction on all rectangle worksurfaces runs horizontal (side-to-side) except as follows: 30″W - 36″W - 42″W - 48″W - 54″W - 60″W x 24″D tops can be specified with horizontal (side-to-side) or vertical (front-to-back) grain.
- 42″W and 48″W x 20″D tops are available with vertical (front-to-back) grain only.
- For standing-height requirements, use worksurface with 41″H O-leg, end panel, L-shaped end panel, or pedestal supports.
- For mobile desks and tables, use post leg with casters.
- Rectangular surfaces are not designed to work with Laminate T-Shaped End Panels.

If using worksurfaces with Coordinate™ Height Adjustable Bases, an External Stiffener must be used.

Attachment of above privacy screen models requires a minimum 1″ clear space/overhang on the underside of worksurface.

Worksurfaces used with Coordinate™ Height Adjustable Bases should have 1″ perimeter gap on each side to provide clearance between other furniture. Failure to do so risks injury or product damage (not covered by warranty).

Attachment of above/below privacy screen models requires a minimum 2″ clear space/overhang on the underside of the worksurface.

Steel external support channel can be attached to the underside of worksurfaces that are subjected to heavier loads. Channel is recommended to provide extra support on unsupported spans of 54″W or greater or per user preference. Ordered separately from worksurface.

If using a 54″W or 60″W floating modesty panel, an external stiffener is required.

NOTES: For use with modular worksurface and support components. Component is ¾″ thick. Full-to-floor sizes can be specified with or without grommet; see chart on page 50 for cord management options. For standing-height applications, a worksurface supported by 1⅛″ thick x 41″H laminate end panel(s) and/or 41″H support pedestal(s), the recommended modesty panel length extends 27⅞″ below the underside of the top, leaving 13″ of wall access; 9½″ and 15¾″W x 13″H backs are available to enclose the balance of the pedestal back. Worksurfaces supported by a 1⅛″ thick x 41″H laminate end panel and 41″H support pedestal, or by two 41″H support pedestals, can be used with a 10″ modesty panel to increase the amount of wall access, however in this application the pedestal(s) should be positioned against a wall, as there is not a 30⅞″H panel to cover the back of the pedestal that is exposed below the modesty panel. For standing-height applications with the worksurface supported by 41″H O-legs or L-shaped end panels, use the appropriate floating modesty panel size.

NOTES:

- Provide approach-side kneespace privacy for user seated at desks, credenzas, returns, and bridges.
- Full-width laminate panel can be specified in 6″ increments from 30″-96″W, and in full-length (27⅞″H) or short (10″H).
- Formal, full-length, 27⅞″H models extend from the underside of the worksurface to the floor.
- 10″H sizes allow quick and easy access to wall power outlets.
- 30″W and 36″W x 27⅞″H are sized to serve as a modesty panel, or pedestal back for respective 30″W and 36″W support storage pedestal models.

! The full-width panel designs are specifically for use when the worksurface supports are two 1⅛″ thick end panels, two support storage pedestals, or one 1⅛″ thick end panel and one support storage pedestal; not for use with O-legs or L-shaped end panels.

! Full-length modesty panels not for use with height adjustable desks/shrouds.

- Mount the HAT control box to the underside of the worksurface near the leg on the same side where power will be fed in. For 3-leg desks mount the control box near the corner column.
- Connect the control box to the motors and handset using the supplied cords.
- Mount the HON power module or customer-supplied power strip to the underside of the worksurface near a surface grommet.
- Route power cords from monitors, computers, docking stations, and other devices through the surface grommet and plug them into the undersurface power source.
- Use the supplied wire-management clips to bundle and secure cables along the underside of the worksurface.

VOI® AND SYSTEMS INTEGRATION

Worksurface Applications

Either Voi or Systems worksurfaces can be used with Voi in an open plan application. There are several support options:

A. Completely panel supported.

B. Combination of panel supported and another worksurface support such as:
- Bookcase support
- Pedestal (Brigade®, Flagship®, Contain®, or Voi®)
- Systems open leg
- Voi O-leg
- End panel (Systems or Voi)
- Tower to worksurface bracket
- Support column
- Systems round post leg
- Voi post leg

C. Freestanding:
- Bookcase support
- Two pedestals (Brigade®, Flagship®, Contain®, or Voi®)
- Two Voi O-legs
- One Voi O-leg and one Voi O-leg support for lower credenzas
- Two end panels (metal or Voi)—requires metal or Voi modesty panel
- Four (Two 2-Pack) Voi angled legs, wood or steel
- Two Voi angled legs, steel and two Voi steel stanchion supports for low credenzas

Additional application guidelines for worksurfaces:

- Systems worksurfaces are available with grommets or no grommets.
- When Voi lower credenzas are used along the spine wall and are placed adjacent to the wing wall, one electrical/data cutout on the wing wall will be blocked.
- When Voi credenzas are used along the wing wall and are placed adjacent to the spine wall, one electrical/data cutout on the spine wall will be blocked.
- When the Voi O-leg support for credenzas is used, it is recommended to also panel attach the worksurface with the worksurface anti-dislodgement bracket kit HWSA2.
- When the Voi O-leg support is used with panels, it is recommended to also panel attach the O-leg to the panel with the O-leg to panel bracket kit HLSPBL (left) and/or HLSPBR (right). This bracket will provide additional workstation rigidity.
- When the Voi end panel support is used with panels, it is recommended to use the end panel support with panel bracket model. This model will provide additional workstation rigidity.
- The worksurface to tower bracket kit, HSTB2W1, will work with Voi towers, Voi worksurfaces, and systems worksurfaces.
- Knife Edge surfaces are recommended to only use angled post legs as supports.
- Knife Edge worksurfaces are intended to be stand-alone. Surface gaps may occur if connecting to a panel or using return worksurfaces.

Application Guidelines—Combination of Panel Supported and Another Worksurface Support

- For applications where 1) the worksurface is perpendicular to the spine wall; 2) the worksurface is panel supported off the spine wall; and 3) there are Voi credenzas placed under the worksurface along the spine: there is not enough clearance to use standard worksurface cantilevers to attach the worksurface to the spine. Use the worksurface anti-dislodgement bracket kit HWSA2 to panel attach the worksurface in lieu of cantilevers.

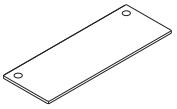

Panel Mounted Stack-on Storage Applications

- The Voi stack-on storage cabinets can be used on Abound and Accelerate as panel mounted overheads.
- The sliding door stack-on storage units are available in 36″, 42″, 48″ widths in addition to 60″, 66″, and 72″ widths.
- The 4 door stack-on storage units are only available in 36″, 42″, 48″, 60″, 66″, and 72″ widths.
- The storage units require a storage to panel bracket kit, model HLSLPMB. This model includes one left hand, one right hand, and one center bracket. The brackets are available in all P1 and P2 paint colors.
- The storage cabinets do not have off modular capabilities.
- For proper installation and support, the storage units must follow the following specification rules:
  - There should be a storage unit of the same construction on each side of a given panel.
  - The storage units on opposite sides of a given panel should be in the same location vertically and horizontally.
  - Only one storage unit per panel, per side.
  - The wing panel adjacent to the spine wall needs to be the same height as the spine wall.

- Worksurfaces are abrasion- and stain-resistant laminate over durable 1⅛″ solid core high performance particleboard: resists wrapping.
- There is one 3″ grommet in 36″W and 42″W worksurfaces and two in 48″W-84″W worksurfaces.
- One flat bracket ships with each worksurface.
- When attaching tops to panels, refer to Systems section of this pricer.
- Square edge detail.
- When using a floating modesty panel or an external channel under the worksurface, the depth clearance for keyboard trays and center drawers decreases by 8″. See accessory matrix in accessory section of the pricer.
- 3″ Power Hub model HGRMTAC can be interchanged with 3″ standard grommet.

- Voi® worksurfaces cannot be used with Abode™ Desks components.
- Grommets in worksurfaces must be specified. If grommets are specified, grommets come in predetermined location.
- Edgeband option only on all Voi worksurfaces. For edgeband options, see matrix on page 207.
- When specifying an 84″ Worksurface, cannot use two O-legs, must use at least one additional support such as a pedestal or lateral file.
- When using a worksurface as a bridge, no additional supports are needed. One support is required for returns, two supports are required for desks and credenzas.
- Lateral file or multi files must be used with surfaces 24″D and 60″W or greater.
- Depending on your support combination, an external channel may be required for extra support on unsupported spans greater than 54″W. Please see the matrix on page 227 for more details.
- If using a 54″W or 60″W floating modesty, it is not necessary to spec an external channel.
- When attaching worksurfaces to panels, one or more of the following are required: anti-dislodgement brackets, end panel, support leg and/or cantilevers. Cantilevers and anti-dislodgement brackets must be ordered separately when attaching worksurfaces to panels.

WORKWALL SPECIFYING/DESIGN GUIDE

This Specification Guide is designed to walk you through the steps when choosing Workwall elements that will meet your particular workplace needs. The step-by-step instructions make it easy to specify elements that personalize workspaces and achieve the right mix of functionality and style.

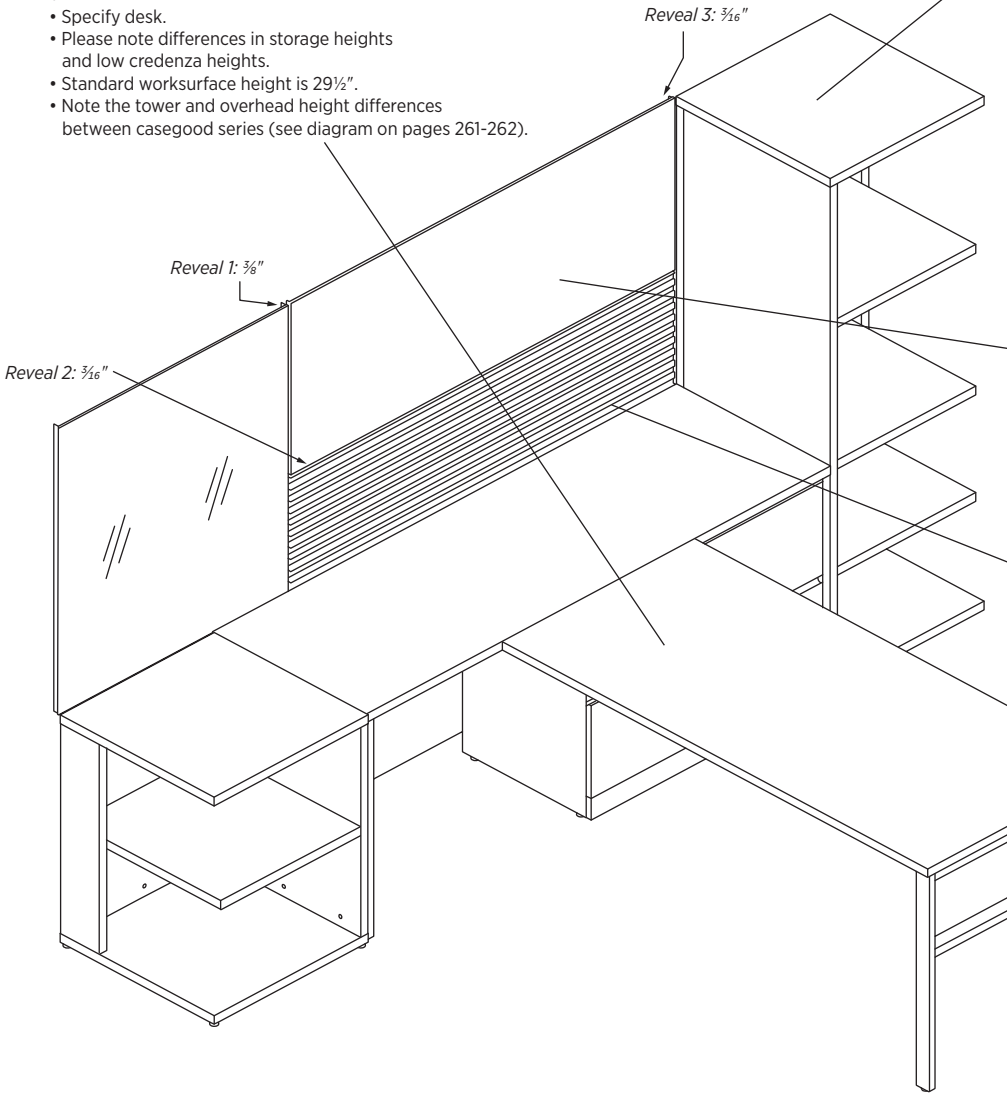

Desking With Tower Storage (Example Shown Below)
Recommended to align Workwall tiles with tower height and work your way down the wall.

Desking Without Tower Storage
Recommended to mount Workwall tiles above worksurface and work your way up the wall.

Without Desking or Storage
Floating application can be utilized in open wall environments such as conference rooms or collaboration spaces. Any size of tiles can be used to fit your space.

STEP 1
- Specify desk.
- Please note differences in storage heights and low credenza heights.
- Standard worksurface height is 29½".
- Note the tower and overhead height differences between casegood series (see diagram on pages 261-262).

STEP 2
- Understand your available wall dimension based on furniture selected or customer application (see matrix on pages 261-262).

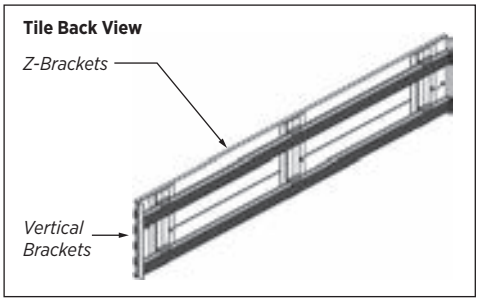

STEP 3
- Select tiles. See material on page 258 and dimensions on page 259.

STEP 4
- Select accessories to add to tiles to create personalization for the user.

NOTES:
- There is a 3⁄8" vertical reveal (Reveal 1) and a 3⁄16" horizontal reveal between tiles (Reveal 2). There is a 3⁄16" vertical reveal between towers and tiles (Reveal 3).
- Wall attachment method is Z-brackets (2 per tile).
  - i. Thickness is 7⁄8" from wall to front of tile (includes tile and hardware).
  - ii. Accessory Single Tool Rail + Accessories (7) + Floating Shelf add to depth dimension.
  - iii. Vertical mounting brackets come pre-installed on tile and hang on Z-brackets. Z-brackets are in two parts. The second part of the Z-bracket is attached to the wall in the field.
  - iv. Wall attachment not included due to different wall types and materials. Attachments must be provided by the installers.
- Wire management or television mounting brackets not included with tiles.

SUGGESTED WIRE ROUTING FOR 2- & 3-LEG DESKS

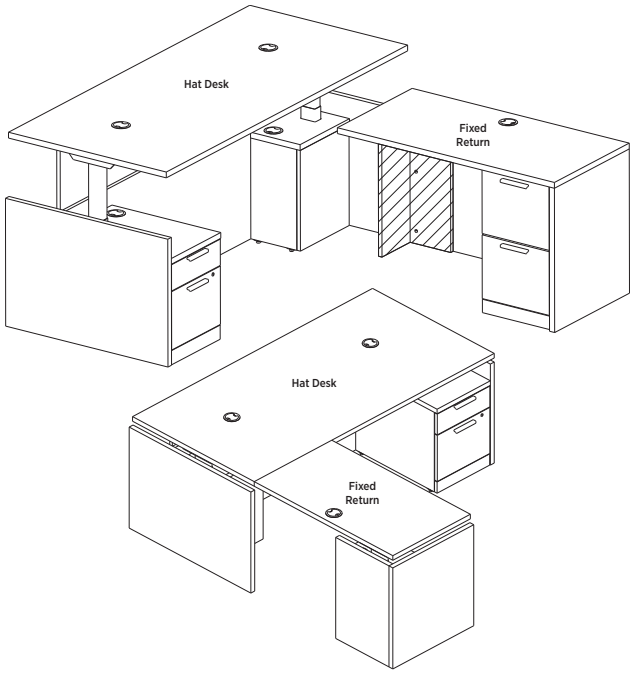

- Determine the building power source location and the preferred location for the HAT handset.
- Route power from the wall or floor into the 105 pedestal/false pedestal and route power from the lower chassis to the underside of the worksurface near the selected controller location. Note: Power input can be easily routed under pedestals and through open wire chase in the bottom of the pedestals.
- Mount the HAT control box to the underside of the worksurface near the leg on the same side where power will be fed in. For 3-leg desks mount the control box near the corner column.
- Connect the control box to the motors and handset using the supplied cords.
- Mount the HON power module or customer-supplied power strip to the underside of the worksurface near a surface grommet.
- Route power cords from monitors, computers, docking stations, and other devices through the surface grommet and plug them into the undersurface power source.
- Use the supplied wire-management clips to bundle and secure cables along the underside of the worksurface.
- Use the supplied fabric wire-management sleeve to route cables (e.g., HAT control power or power strip cord) between the worksurface and chassis through the pedestal grommets.

NOTES:

- Easy-care, scratch-, spill- and stain-resistant laminate over 1⅛″ solid core high-performance particleboard.
- Grain direction on all worksurfaces runs horizontal.
- One flat bracket (mounting plate) ships with each worksurface for applications requiring connection to an adjoining worksurface.
- For standing-height requirements, use worksurface with 41″H laminate L-shaped end panel or metal O-leg.
- For 30″, 36″, 42″ and 48″W x 24″D mobile desks and tables, use post leg with casters model HMBPOST.C.
- For end panels, legs, columns and bases, see the Worksurface Supports listing on pages 295-296.
- When using a floating modesty panel or an external channel under the worksurface, the depth clearance for keyboard trays and center drawers decreases by 8″. See accessory matrix in accessory section of the pricer.

❗ 84″W worksurfaces are for 29½″H applications only (not 42″H) and require a T-support brace or other weight-bearing floor support to be positioned between the O-legs or L-shaped end panels.

❗ Worksurfaces are subject to slight bowing. The magnitude of the deflection is dependent upon the weight, placement, and duration of the load.

❗ When using a worksurface as a bridge, no additional supports are needed. One support is required for returns, two supports are required for desks and credenzas.

❗ External channel support is recommended for extended unsupported spans or heavily loaded worksurfaces. See above for details.

ABODE™

WORKING WITH ABODE™ COMPONENTS

Configurations

End Panels and Support Legs

Each are available in two options: freestanding or panel mount. The only difference between the two options are the panel-mount models come with a left- or right-handed bracket to attach the support to a panel in a systems application.

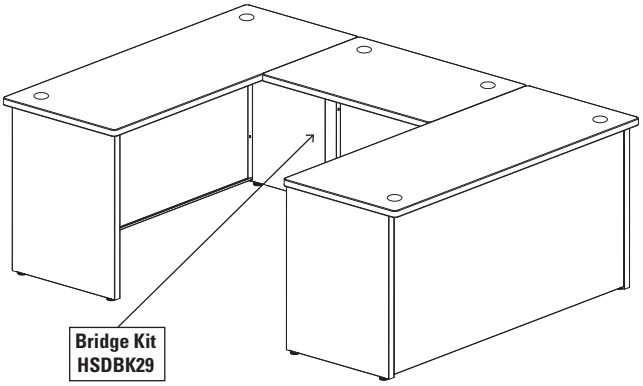

The 11″D end panel is used to support peninsulas.

Corner Desk Legs

Corner desk legs have a 90-degree bend and welded construction. The strong construction allows gussets or half-height modesty panels to be used with corner legs.

Bridge Kits

Bridge kits include: two flat brackets, two modesty panel-to-end panel attachment brackets, and two tie straps. This kit is used when attaching a bridge unit between two rectangular worksurfaces.

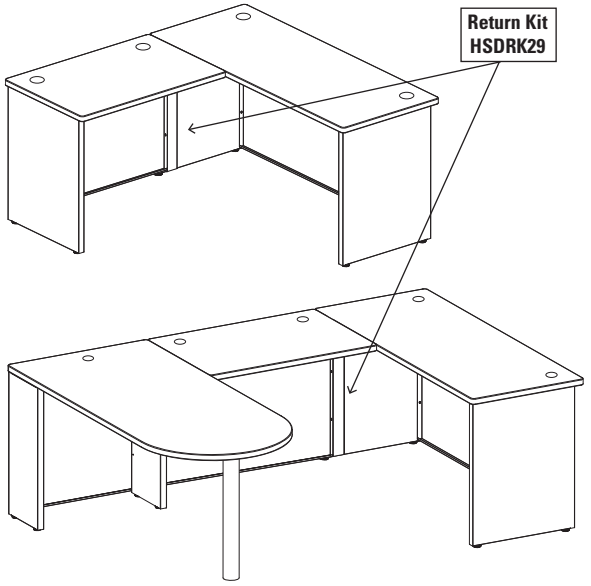

There are some bridge instances where only half of a bridge kit is needed (e.g., using a bridge between a rectangular worksurface and a corner or peninsula). A return kit may be ordered for these instances.

Support Column

Support columns are used to support one end of curvilinear worksurfaces. Includes column, worksurface bracket kit HWSA2, attaching hardware, and adjustable glides.

Return Kits

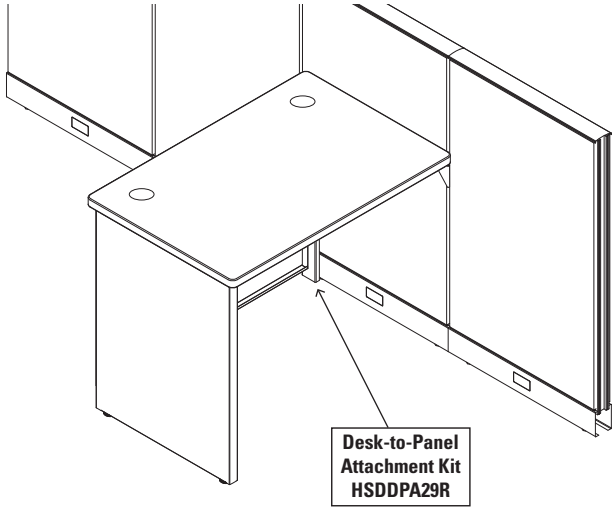

Return kits include: one flat bracket, one modesty panel-to-end panel attachment bracket, and one tie strap. These are used when attaching a return to a primary desk. Return kits can also be used in some bridge applications — one example is shown below when using a peninsula.

Desk-to-Panel Attachment Kits

Desk-to-panel attachment kits are used to connect a worksurface and modesty panel perpendicular to a panel of corresponding width. Opposing end of worksurface must be attached with an end panel, support leg, or corner leg mounted directly under this worksurface.

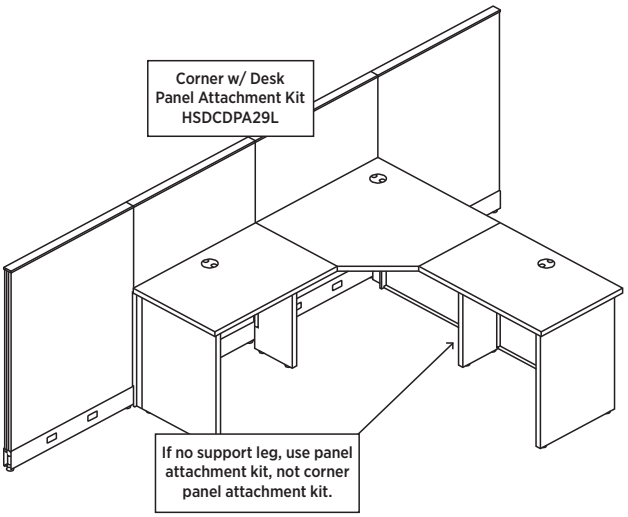

When using a corner or corner cove worksurface with the rear corner attached to a panel, and opposing end of worksurface is attached to a freestanding desk, use corner w/desk attachment kit. Hand of unit is determined from the user's side of the desk (right-hand unit attaches to right side of modesty).

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

Corner w/Desk Panel Attachment Kit

Corner w/desk panel attachment kit connects the rear corner of a corner or corner cove worksurface and modesty panel to a panel when the opposing end of the worksurface shares a support leg with an adjacent freestanding desk and the support leg is mounted under the freestanding desk. Hand of unit is determined from the user's side of the desk (left-hand unit attaches to left side of modesty).

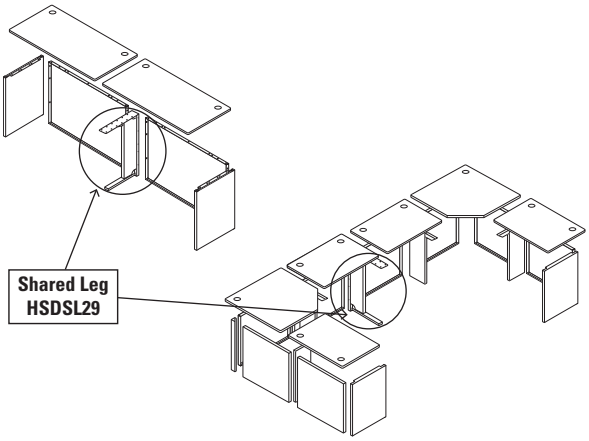

Corner Worksurfaces

Corner worksurfaces accommodate 90-degree corner desk legs.

In-Line Connections of Desks

Shared leg can be used at in-line connections to support adjacent rectangular desks.

Pedestals and Storage

Pedestals must be ordered smaller than the depth of the worksurface. For example, 18″D peds should be used with 24″D worksurfaces. 18″D or 23″D pedestals can be used with 30″D worksurfaces. Using 18″D laterals or personal files provide additional storage options under 24″D worksurfaces.

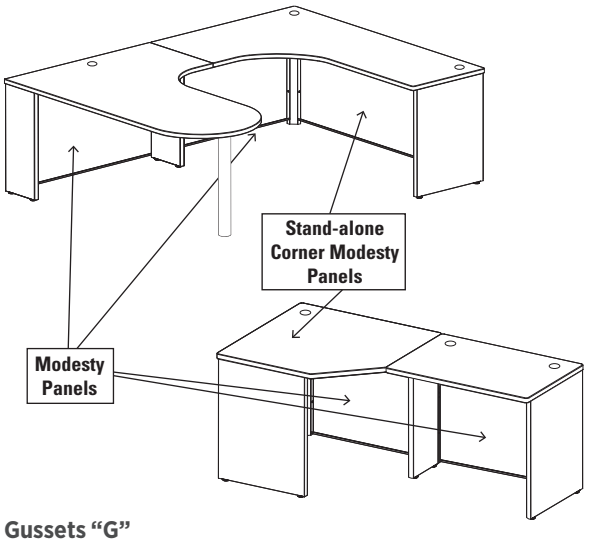

Modesty Panels

The following are some general guidelines for Abode™ modesty panels:

- **Desk:** Modesty panel width is the same width as the worksurface
- **Return:** Modesty panel width is 6″ greater than the width of the worksurface
- **Bridge connecting two rectangular worksurfaces:** Modesty panel width is 12″ greater than the width of the bridge worksurface
- **Bridge connecting a rectangular worksurface and corner or peninsula:** Modesty panel width is 6″ greater than the width of the worksurface
- **Corner connecting to an adjacent worksurface:** Modesty panel width is the same width as the worksurface.

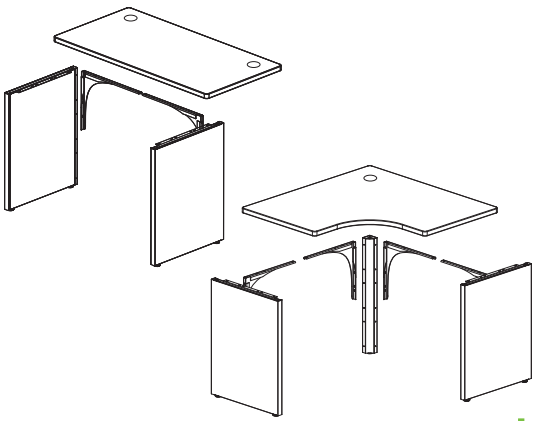

Stand-Alone Corner Modesty Panels

Stand-alone corner modesty panels are used only when one or both sides of a corner or corner cove worksurface are freestanding and NOT attached to another worksurface. Specify the width the same as the width of the worksurface.

Gussets "G"

Gussets can be used in place of a modesty panel with desks 36″W to 60″W. Gussets can also be used with corner desk legs.

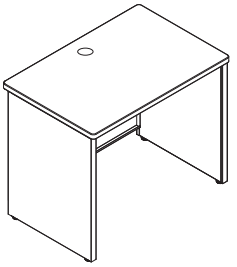

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ABOUND® FRAMES OVERVIEW

FRAME DIMENSIONS (ACTUAL)

Depth: 2⅝″ (use 2¾″ to calculate intersections in length of panel run)

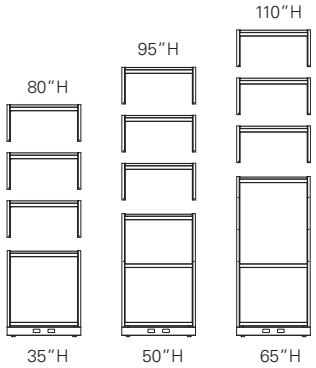

Widths: 24″, 30″, 36″, 42″, 48″, 60″

Heights*: Painted trim: 34½″, 42″, 49½″, 57″H, 64½″

Stacking Frames: 15″H, 30″H

*with levelers fully retracted

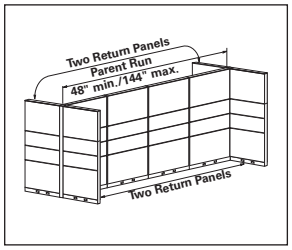

Stacking frames can be added to the top of any 35″H, 50″H or 65″H frame. Adding stacking frames to 42½″H and 57½″H frames is not recommended due to inconsistencies in segmentation. 15″H and 30″H stacking frames can be used to add up to 45″ of additional height to a standard frame. Do not combine differing frame widths in a single stack.

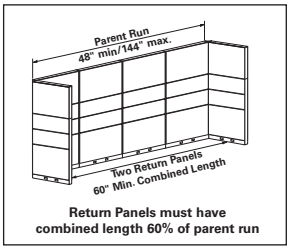

NOTE: When stacking on 42½″H or 57½″H frames, panel slots will be off by ½″ compared to any other height panel. When stacking on 42½″H and 57½″H frames, hanging accessories will be ½″ off in height compared to accessories hanging on panels at any height other than 42½″H and 57½″H.

BUILDING HORIZONTALLY WITH ABOUND FRAMES

Important planning guidelines: For adequate stability, one of two methods of stabilization must be adhered to:

Method 1—Opposing returns: A parent run must be a minimum of 48″ and a maximum of 144″ between return panels. The parent run must have a minimum of two return panels running in opposing directions on each end of run. Return panels must be a minimum of 24″W and must not be any more than 30″ shorter in height than parent run.

Return Panels must have combined length 60% of parent run

Method 2—Single-sided returns: A parent run must be a minimum of 48″ and a maximum of 144″ between return panels. The parent run must have a minimum of two return panels totaling at least 58% of its length, extending in one direction. Return panels must not be any more than 30″ shorter in height than parent run. Any run under 100″ must have a minimum combined length of 60″ of return panels.

GENERAL GUIDELINES FOR USE OF SLIDING DOOR

- The system requires the ordering of both a door and a mounting bracket kit.
- All doors are 42″ wide to accommodate a 36″W opening and are non-handed. Door leveling is dependent on floor being level.
- A mounting bracket kit must be ordered for each door corresponding to the mounting panels width (30″W, 36″W, 42″W, or 48″W).
- Mounting bracket kits are system specific.

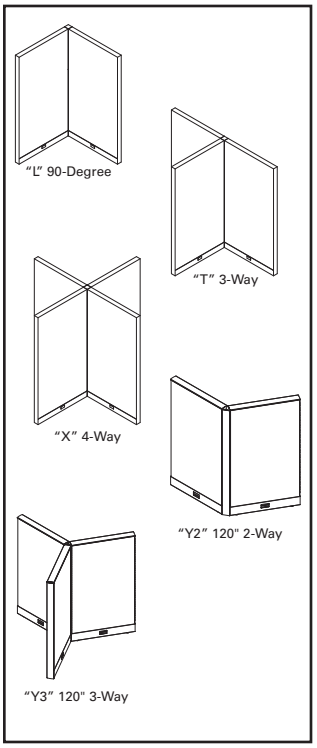

GENERAL GUIDELINES FOR LAYOUT PLANNING OF SLIDING DOOR

- Stability guidelines must be followed when specifying a sliding door. (Refer to page 381). The sliding door system was designed to close an opening in a run of parallel panels. Doors mounted to long runs of panels without floor support, ties to worksurfaces, or return panels may seem less stable.
- If the door is used to close an opening (A) where the panel opposite the door is at 90°, there will be a gap equal to the panel thickness between the door and the panel end when closed.
- When planning the layout, care must be taken if the plan includes a door mounted on a panel that is less than 42″W. If the panel is at a corner (B), the door will protrude into the aisle or next workstation when in the open position.
- If back-to-back doors are mounted on panels (C) that are less than 42″W they will interfere with each if both are open at the same time.
- The door is attached at the base of the panel at any end position with a wraparound bracket. Bracket kits are ordered in conjunction with appropriate end trim profiles. The slots at the base of the panel must be clear (D) and cannot be utilized by worksurface supports or panel hung components.
- If the door is mounted to a panel run that is positioned adjacent to a wall (E) or an inside 90° angle and there is not a 42″ clearance between the track and the wall/inside 90°, the assembly of the first stop will be difficult and plans will need to be modified for the assembly.
- If a door is closing an opening of a workstation that includes a “T” connector in the opposite wall, an extended straight connector may need to be used to maintain the 36″ required opening.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ABOUND® FRAMES OVERVIEW

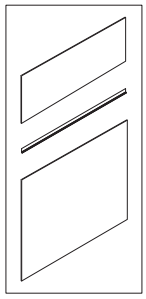

INTERSECTING CONNECTIONS

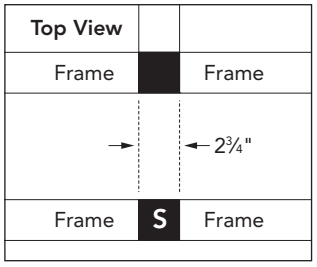

"L", "T", "X", "Y2" and "Y3" connector kits are used when connecting frames at intersecting runs. For "L", "T" and "X" connector kits, add 2¾" to the total length of the panel run for each intersection, whether located in the middle or at the end of the run.

Wall starter kits provide a means to affix a panel run to a permanent building wall. Kit adds 1⁵⁄₃₂" to length of panel run.

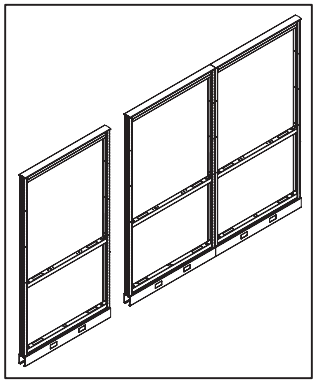

Segment bars — horizontal cross members required between tile segments. Must be specified on each side of frame. One Segment Bar is needed for each reveal between tiles.

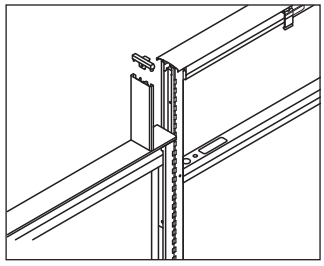

Extended straight connector kit "S" can be used to keep continuous runs dimensionally consistent with opposing panel runs which incorporate "T" or "X" intersections. (Add 2¾" to the length of the run for every extended straight connector used.)

IN-LINE CONNECTIONS

Direct connections between same height frames in a continuous run are accomplished with provided hardware. There is no incremental increase in dimension along the run.

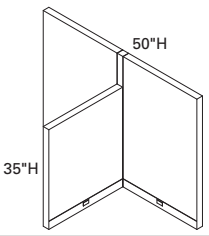

END OF RUN
Finished end trim must be specified for the unconnected sides of panel frames. The Abound end trim adds ⅜" to the length of the panel run. When adding a stacking frame, order finished end trim in the height that matches the stacking frame height. Move the end cap from the standard frame end trim to the stacking frame end trim.

IN-LINE VARIABLE HEIGHT TRIM
In-line connections between different height panels require trim to cover the exposed frame of the taller panel. The bottom of the trim is contoured to match the profile of the frame top cap.

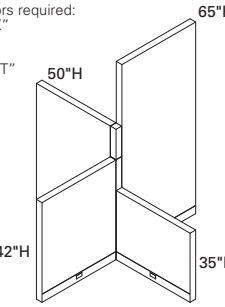

Multiple-height connections are accomplished by combining standard height panel connectors (35"H, 42½"H, 50"H, 57½"H, and 65"H) with shorter connectors (7"H, 15"H, 22"H, and 30"H). Start from the bottom-up — select the standard connector that corresponds to the height and connection type of the tallest panel, then use the shorter connectors for variable height and connector top cap trim. (See examples.)

Example 1
1 ea. 50"H T-Connector
1 ea. 15"H S-Connector

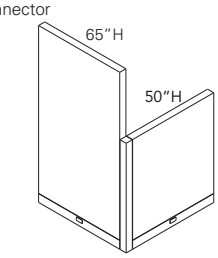

In variable height "T" connections — as shown above — you would use the connectors as indicated.

Example 2
Connectors required:
1-35"H "X"
1-7"H "T"
1-7"H "L"
1-15"H "FT"

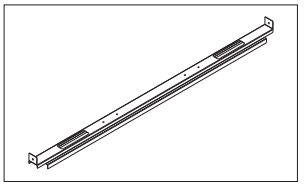

Example 3
Connectors required:
1–50"H "L"
1–15"H Variable Height Trim over Connector

Example above represents Abound variable height "L" for 65" to 50" connection over connector.

VARIABLE HEIGHT CONNECTION TRIM
L, X and T connections between different height panels require trim to cover the exposed frame of the taller panel. The bottom of the trim is flat to match the profile of the Universal Connector top cap. Models are designated as "Variable Height Finished End over Connector Trim". For variable height connections in a Y configuration, contact the HON Product Solutions group.

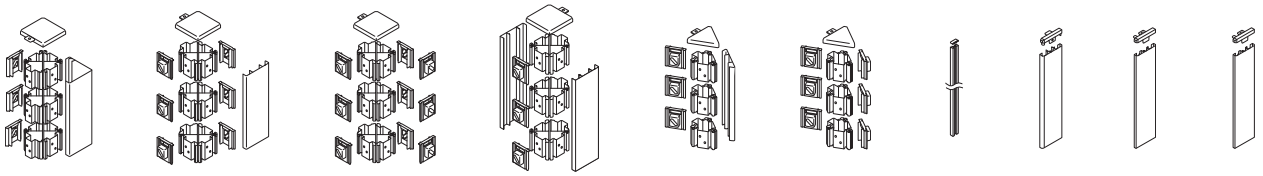

OPTIONAL STIFFENER SUPPORT
Stiffener supports can be used to provide additional rigidity to a panel when fabric tiles are on both sides of the frame. May also be used for routing power/data at non-standard heights.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

- Abound Connector Kits include universal connector block(s), bracket clips and painted metal trim.
- The universal connector block can be used for an L, T, X, or Extended Straight connections, simplifying staging and installation at the project site as well as future reconfigurations.
- Bracket clips are attached to the connector blocks as needed based upon connection type.
- While the connectors themselves are universal, Abound connector kits must be specified by connection type (X, L, T, S, 120 degree) in order to receive the correct type of trim.

ABOUND® TILE OVERVIEW

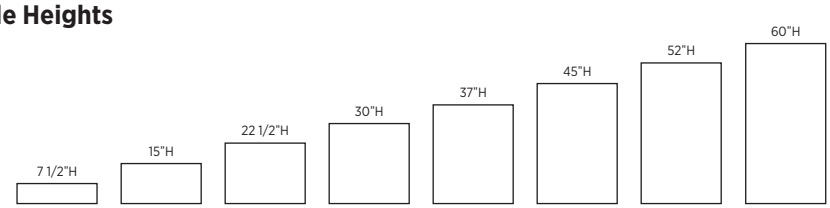

Abound tiles come in a variety of styles.

*Aesthetics of opposing tile surface and/or frame interior should be considered when selecting light-colored sheer materials.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

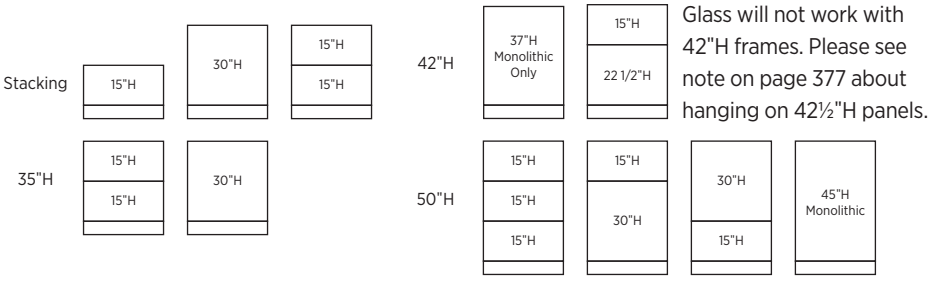

Tile Heights

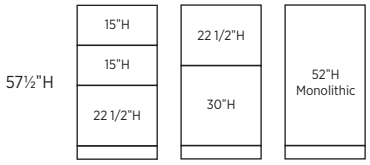

Monolithic tiles are 5" shorter than frame heights to account for top trim and base raceway.

Typical Tile Height Configurations

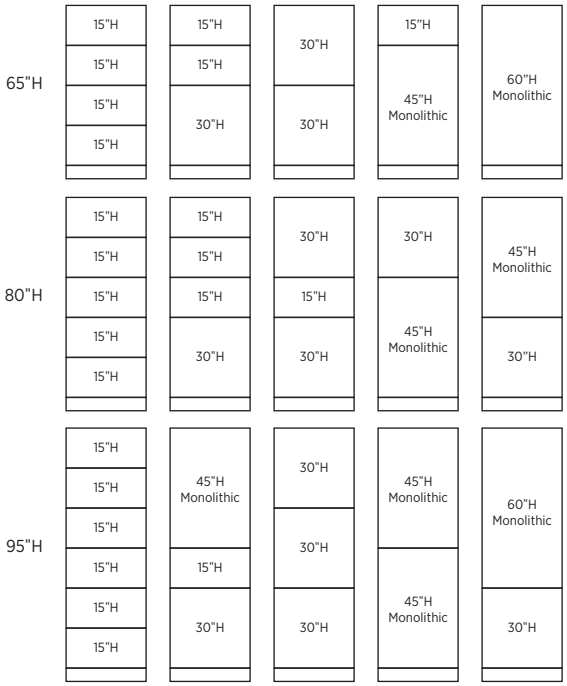

Segment bars are required between any two tiles — order separately based on tile configuration on each side of frame. Note: Most CAD specification programs will calculate quantity of segment bars required.

Glass will not work with 42"H frames. Please see note on page 377 about hanging on 42½"H panels.

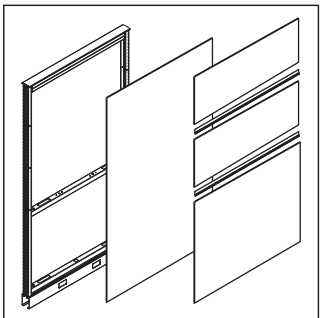

Please see note on page 377 about hanging on 57½"H panel heights.

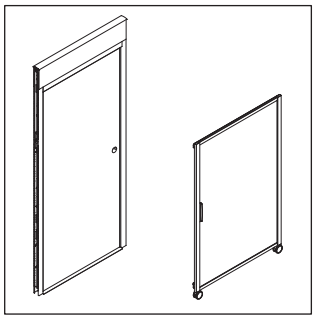

*Additional tile combinations to those shown above are possible; heights above 65" require stacking frames - maximum height is 110".

To calculate the total height of tiles(s) required, deduct 5" (height of base/top trim) from the total nominal panel height.
EXAMPLE: 65"H Frame takes 2 30"H tiles. 65–5 = 2 x 30 or 45 + 15

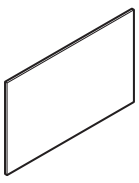

Tiles and Top Caps are ordered separately

Tiles can be ordered in the size that matches the frame height plus the stacker height.
EXAMPLE: If you are using a 35"H frame plus a 30"H stacker, you can order 2 – 30"H tiles or 1 – 60"H tile.

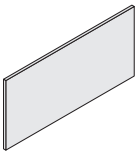

Door panels include frame, 42"W door, hinges and attaching hardware. Two 7½"H fabric tiles for the top of the door frame are required and ordered separately (HRVD0742T).

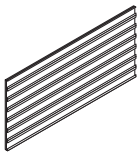

Sliding doors are available in 50", 65", and 80"H models and can mount to 30", 36", 42", and 48"W panels. The doors provide a 36"W opening and are 42"W, nominally. The doors ship non-handed. A Mounting Bracket Kit must be ordered for each door corresponding to the mounting panel's width (30", 36", 42", or 48"W).

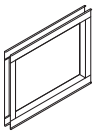

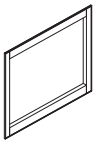

Hard-surface Tiles include tile and Custom Bracket Kit.

ABOUND® SYSTEMS
Electrical and Data

Abound String-in Capacity

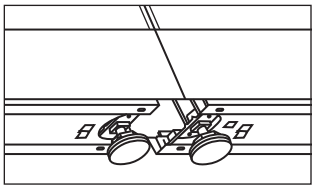

Openings in frame sides permit electrical data and communication cables to be run between frames in Abound. Using tackable acoustical tiles, the beltline pathway accommodates up to 62 cables (.25″ dia) or 46 cables with electrical components installed.

DO NOT run electrical equipment or extension cords through cable openings in frame sides. Use beltline or base-mounted electrical system for all electrical supply.

Horizontal Capacity of Abound Frames*

*46 cables with electrical installed at beltline. 62 cables without electrical installed at beltline.

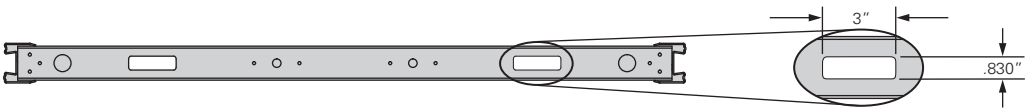

Cables can enter/exit panel through underside of base pathway at juncture between frames. Openings are sized as follows (in sq. in.):

Straight connection	6.0
“S” Extended Straight Connection	10.0
“L” 90° Connection	8.9
“T” Connection	15.9
“X” Connection	17.9
“Y” Connection	—

When leveling glides are fully retracted, panel-to-floor clearance is 7/16″. This may affect the volume of cabling that can be fed into the frame from the bottom of the pathway.

Vertical Capacity

Vertical Capacity Through Panel Frames

	Panel Width	Qty of .25″ Cables at 45% Fill Ratio	Qty of .25″ Cables at 60% Fill Ratio	Total Space (sq. in.)
Abound	24″ – 60″W	48	64	5.26

- A 60% fill ratio is achievable; however, when electrical components are installed in the beltline area, cabling capacity through the beltline area will be limited to approximately 45% fill ratio.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ACCELERATE® PANELS OVERVIEW

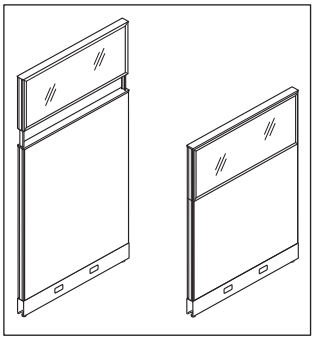

INTERSECTING CONNECTIONS

"L", "T" and "X" connector kits are used when connecting frames at intersecting runs. For "L", "T" and "X" connector kits, add 2¼" to the total length of the panel run for each intersection, whether located in the middle or at the end of the run.

Wall starter kits provide a means to affix a panel run to a permanent building wall. Kit adds ⅞" to length of panel run.

STACKING PANELS

Stackers add 15" to the height of the base panel and can be ordered separately or as part of the panel model, see pages 421 and 424.

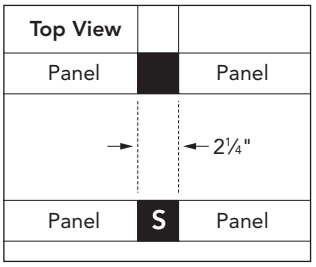

When adding stackers to an existing panel, a new connector must be ordered, to the tallest panel height.

Please note that Stacking Panels are not to be used freestanding and must match the panel width of the panel it is stacking on.

Cannot use a stacking panel on a Top Tier Glass Panel model.

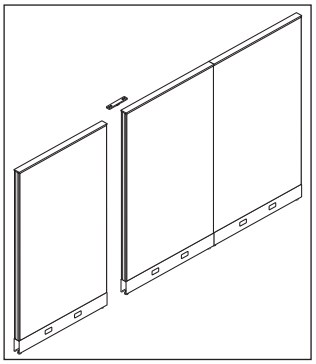

Stackers ship with pins to connect stacker to post connector for added rigidity.

Stackers can be stacked up to 80"H on a base panel. Overheads can be placed on the first stacker only, up to 65"H. Voi overheads are not to be placed on stackers.

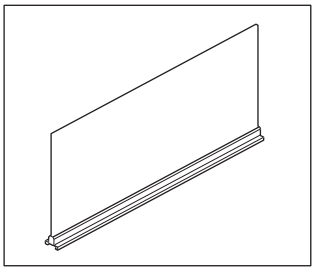

Extended straight connector kit "S" can be used to keep continuous runs dimensionally consistent with opposing panel runs which incorporate "T" or "X" intersections. (Add 2¼" to the length of the run for every extended straight connector used.)

IN-LINE CONNECTIONS

There is no incremental increase in dimension along the panel run when using an in-line connector kit.

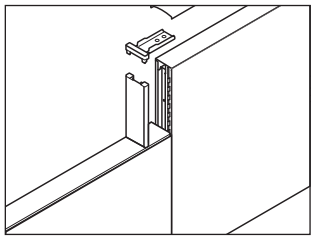

END OF RUN
Finished end trim must be specified for the unconnected sides of panel. When adding a stacking panel, order finished end trim in the height that matches the total stacked height. Move the end cap from the standard frame end trim to the stacking frame end trim.

Accelerate® frameless glass is single pane, ⅜" thick laminate safety glass, available in clear or frosted glass.

Frameless glass is not allowed on top of glass stackers or glass header panels and hanging or stacking on frameless glass is not permitted.

Frameless glass can span multiple panels with one piece of glass, creating a clean, seamless look.

IN-LINE VARIABLE HEIGHT TRIM
In-line connections between different height panels require trim to cover the exposed frame of the taller panel.

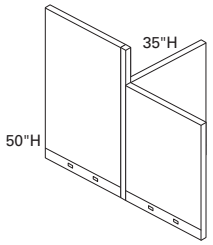

VARIABLE HEIGHT CONNECTOR TRIM
L, X and T connections between different height panels require trim to cover the exposed connector. The bottom of the trim is flat to match the profile of the top cap. Models are designated as "Variable Height Connector Trim". For variable height connections in a Y configuration, contact the Accelerate Specials Department.

Multiple-height connections are accomplished by combining standard height panel connectors (35"H, 42"H, 50"H and 65"H) with shorter trim kits (7"H, 15"H, 22"H and 30"H). Start from the top-down — select the standard connector that corresponds to the height and connection type of the tallest panel. (See examples.)

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

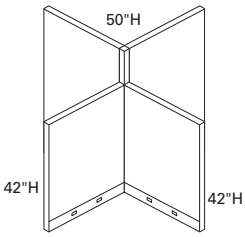

ACCELERATE® PANELS OVERVIEW

Example 1
Connectors required:
1-50"H "T" Connector
2-15"H Connector VH Kit
2-35"H End Trim
1-65"H End Trim

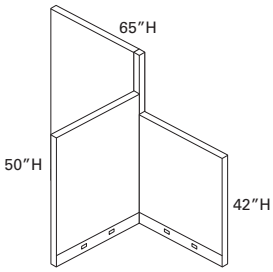

In variable height "T" connections — as shown above — you would use the connectors as indicated.

Example 2
Connectors required:
1-50"H "X" Connector
2-7½"H Connector VH Kit
2-50"H End Trim
2-42"H End Trim

Example 3
Connectors required:
1-65"H "T" Connector
1-15"H Connector VH Kit
1-22½"H Connector VH Kit
1-65"H End Trim
1-50"H End Trim
1-42"H End Trim

Example above represents Accelerate variable height "L" for 65″ to 50″.

TOP CAPS
Top caps must be specified as a separate model from the panel. Top caps can span more than one panel when panels are connected in an in-line.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

PANEL SPECIFICATION AND INSTALLATION NOTES

Definitions:
Parent Panel Run – Panels (or a single panel) configured in a straight line intended to divide space. It is usually longer than the panels used to stabilize it.
Return Panels – Panels attached to a parent run for the purpose of stabilizing it. Return panels may also have the effect of dividing space.
Note: Return panels must be no more than 30″ lower than the maximum height of the parent panel run. When stacking, the maximum height allowed is 80″. This includes frameless glass. If attaching overhead storage, return panels must be the same height as parent run.

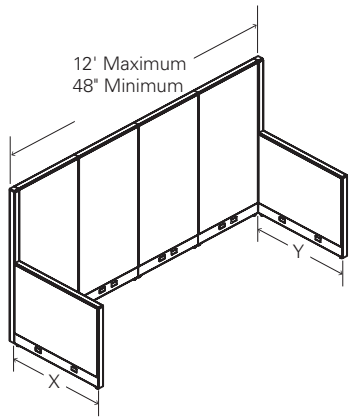

Method 1: Opposing Returns

A parent panel run must be a minimum of 4 feet and a maximum of 12 feet, and must have a minimum of two return panels extended in opposing directions on each side of the parent run.

NOTES:
- Strengthened Connection Straps provide more rigidity to panel connections, especially when not tied into a station with a worksurface or storage, i.e., when Coordinate™ Height Adjustable bases are used or when using panels strictly to divide space without tying in other components.
- Connector strap type should be specified based on the tallest panel connection type. Connector straps and posts are specified separately.
- Lower height panels will connect with variable height trim.
- See examples below.
- Connector straps can be retrofitted on any existing Accelerate® stations that were produced from April 2016 to present.
- Will fit on existing connector posts — only straps would need to be specified.
- Single Straps (HECS1) are used when power poles enter at the connector post and in variable height applications where the tallest panel is a single and one or more panels is lower.

EMPOWER®
Step-by-Step Guide

STEP 1: LEGS

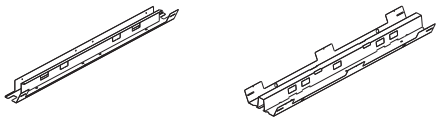

U-leg or angled leg available for dual-sided, single-sided, and 120° applications. NOTE: Gallery Panels act as supports for fixed height Empower® and will replace the leg.

Gallery Panels: Specify your Empower®-specific Gallery Panel Kit along with your desired gallery panel from the "Gallery Panels" section. See pages 488-521.

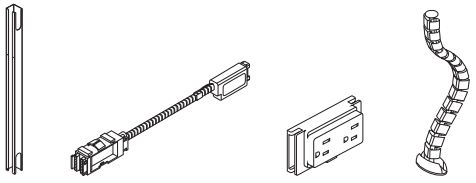

STEP 2: SUPPORT BEAMS

Support Beam(s) required for all worksurfaces. See page 448 for details.

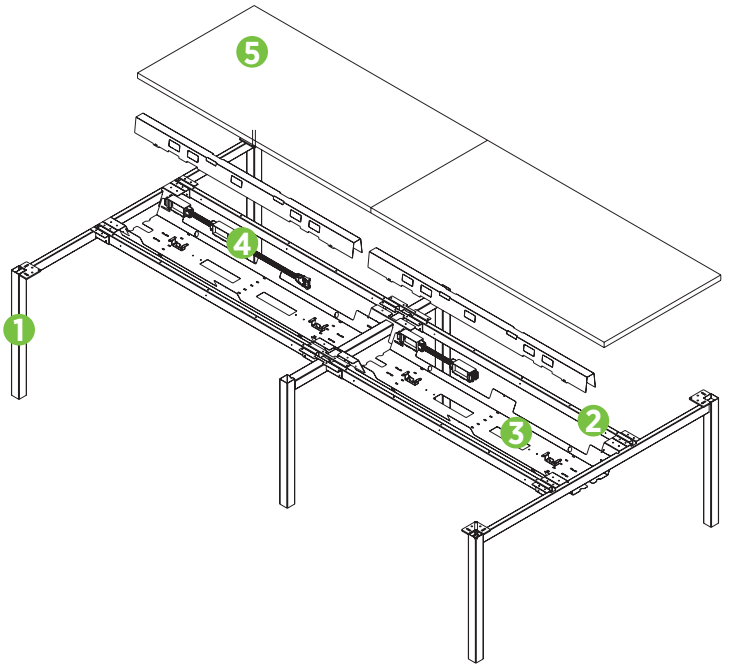

STEP 3: TROUGHS

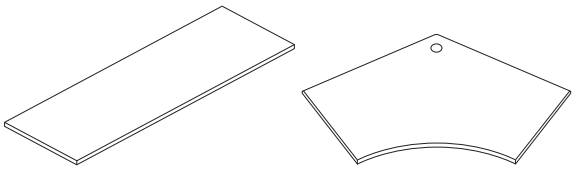

Used to route electrical and data to the workstations. Must be installed in between all supports and match the width of the support beams.

STEP 4: ELECTRICAL

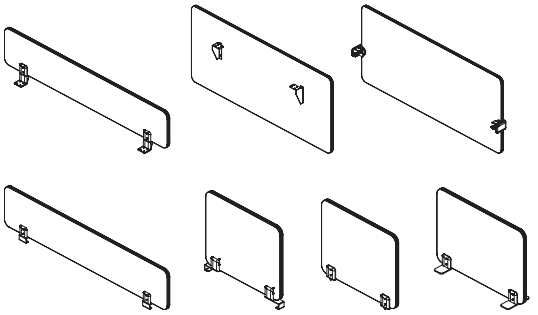

Electrical components mount to the trough and mounting hardware is included with the trough model.

STEP 5: WORKSURFACES

Select worksurfaces as appropriate for your application. Worksurface width should match beam size. Worksurface depth should match end leg size. See page 450 for details.

STEP 6: OPTIONAL ACCESSORIES

Screens: Specify an Empower®-specific shared screen or select from several Universal Screens options (fixed above/below, up mount, side mount, front-to-back, sit-on-surface, top mount, modesty, and lateral organizer) to add privacy to your station. Above/below and modesty screens can be used on single-sided applications only.

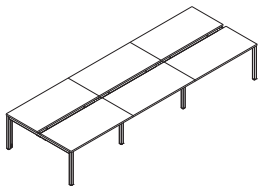

Collaborative Table: Specify an Empower® Collaborative table at the end of a dual-sided Empower® Workstation.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

EMPOWER®
ELECTRICAL SPECIFYING INFORMATION

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - **The Four-circuit system (4-Hot/2-Neutral/2-Ground)**
     - **3 + 1 option**
     - **2 + 2 option**
   - **The Three-circuit system (3-Hot/3-Neutral/2-Ground)**
2. Determine location, quantity and circuit of duplexes.
3. Determine the appropriate choice and use of Isolated, Isolated/Dedicated and Separate Neutral circuits.
4. Specify appropriate Power Harnesses* and Pass-Thru Cables.*
5. Determine the location, quantity and type of Power In-feed needed.

* Select Power Harness models (HH8712XX) and Pass-Thru Cables (HH8711XX) with the last two digits being the same as the associated worksurface width.

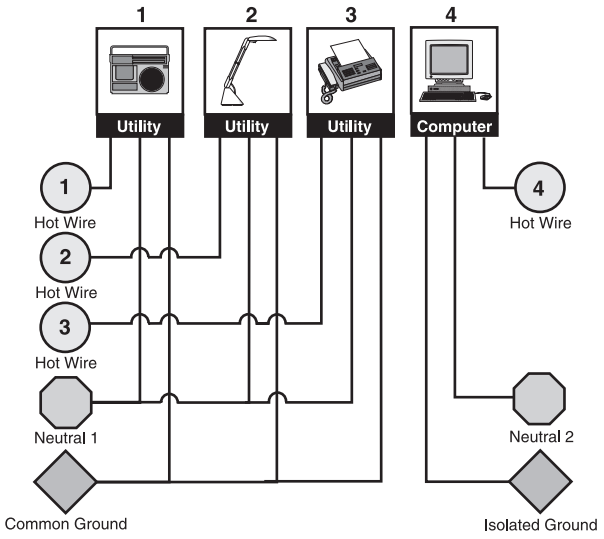

Electrical System Options

The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power in-feed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals.

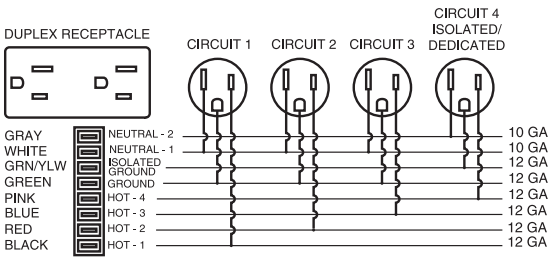

Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an "A" suffix and appear in a gray box in this pricer.

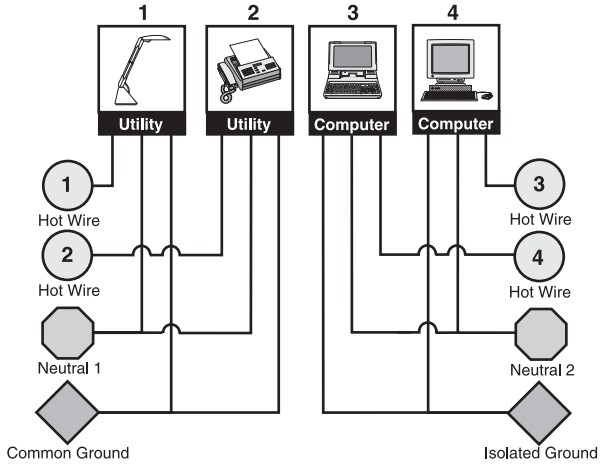

Four-circuit, 3 + 1 Receptacle Option

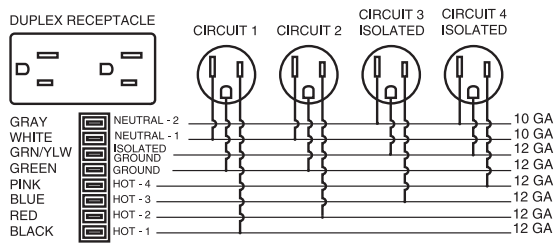

The 3 + 1 option is the electrical standard used by The HON Company for many years in most of their systems products. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment.

Four-circuit, 2 + 2 Receptacle Option

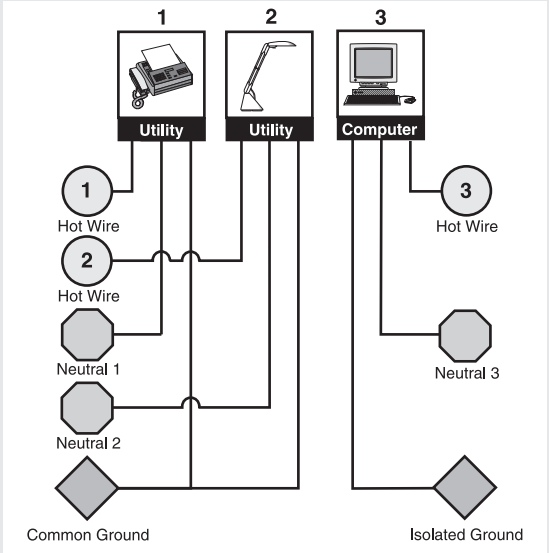

The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

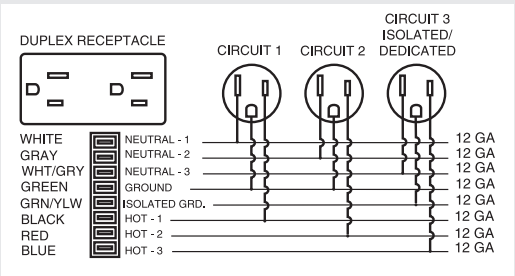

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

EMPOWER®
ELECTRICAL SPECIFYING INFORMATION

Three-circuit, separate neutrals

The Three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/dedicated. The three-circuit components have model numbers with an "A" suffix and appear in a gray box in this pricer.

Two 8-wire, 20 AMP (15 AMP Canadian) electrical systems are offered

(1) Circuit-2 (one of the 3 common circuits sharing a neutral wire) cannot be used with a single-phase building electrical supply.

Notes:
- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.
- Components of the two systems are keyed differently to prevent components of one system from being connected to components of another system.
- HON Cat. Nos. are printed on the UL labels, and components are color-coded to provide visual identification of the different components.
- Four-circuit components have black plastic parts.
- Three-circuit components have rust-colored terminal ends and receptacle backs are rust colored.

Typical power usage by the most commonly specified office equipment.

- When the system panel is higher than the Gallery Panel, the variable height system's trim must be specified to finish off exposed frame.

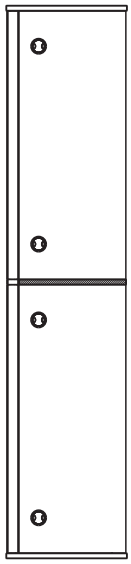

MID-CONFIGURATION (SINGLE-SIDED OR DUAL-SIDED)

- Mid-configuration panel does not overlap parent system panel.
- When specifying mid-configuration panels, one Gallery Panel "block and trim" kit (HRVCXXGP) is required to space the system panels out 1⅛″. Kits include: Connector blocks, vertical trim, and a top cap.
- "Block and trim" models must match the height of the parent run.
- Specify one mid-connector kit (HRVCM) per Gallery Panel to attach to parent run. Gallery Panel and mid-connector kit attach over "block and trim" kit. Dual-sided application requires two connector kit models.
- When using a mid-configuration Gallery Panel, both panel frames in the spine must be of equal height.

NOTES:
- When specifying Wing End of Run panels, the Gallery Panels are 3″ wider to allow for the panel to cover the width of the spine.
- Mid-configuration creates 1⅛″ space between the system panels. This gap matches the thickness of the Gallery Panel.
- Wing End of Run widths of 51″, 63″, and 75″W can be used as spanning end of run configurations.
- Gallery Panels come standard with two adjustable leveling glides.
- Gallery Panels require connectors to attach to the spine of the panel. See connectors on pages 517-518.
- Gallery Panels up to 60″W can specify vertical or horizontal woodgrain direction. Panels larger than 60″W will have horizontal woodgrain.

Minimum panel length must be 50% of the Gallery Panel for stability.

When system panel is higher than the Gallery Panel, system's variable height trim kit must be specified to finish off the exposed frame (Abound® only).

Standard Gallery Panels can only connect to standard panel frames. Use Gallery-to-Gallery Panels to connect Standard Gallery Panels to other Gallery Panels.

Gallery Panels longer than 60″W require a floor or storage support.

- Available in all paint colors to match panel trim or coordinating colors to the height adjustable base.
- Brackets telescope to account for 24″ and 30″ deep worksurfaces and screen attachments.

GRAVITATION™ POWER BEAM ORDERING INFORMATION

Gravitation™ Ordering Checklist

When specifying Gravitation™ Power Beams for your workspace, follow the ordering checklist below to ensure full functionality.

- Beams (HBEAM48, 60, or 72).
- Legs to go with beams based on how the beams will be connected (HBLEG23).
- Electrical Harnesses, Receptacles, and In-feeds.
- Specify connectors, power hubs, and/or power poles (HBEORH23, HBEORT23, HBILNH23, HBCONU, etc.).
- Port Covers (for any power/data ports left unused).
- Metal, fabric, and PET screens and acrylic, fabric, and laminate modesties available.

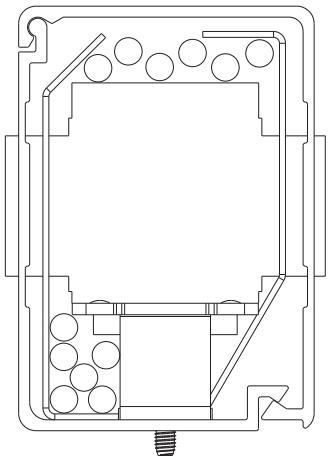

General Rules:

- Generally, a rail should be supported by two feet.
- If a rail connects DIRECTLY to another rail, it can share a foot.
  - 2 rails connected would have 3 feet instead of 4.
- When using the universal connector to change directions, feet are not shared between rails in the same "plane".
  - However, rails going perpendicular to the main line will skip the foot next to the universal connector.

When two rails share a leg, the leg is centered between the legs in the "outer slot". When the leg is positioned **at the end of a run of rails** (i.e., the rail doesn't connect to another rail), the leg will be inset 1⅞" from the end of the rail, not the end cap, in the "inner slot".

Cable Capacity

- The Power Rail housing allows continuous voice and data lines to run without interruption.
- Lay-in is provided for environments where systems furniture or cabling are subject to frequent change.
- Lower cavity allows for 6 voice/data cables (¼" diameter).
- Upper cavity lay-in allows 6 voice/data cables (¼" diameter).

Hardwire (Chicago Code) Junction Box

Wiring harnesses and snap connectors are not allowed in Chicago—base pathways must be comprised of all metallic components. Concealed mounting is the only option at beltline. For the base pathway, junction box (model HH871500) clips directly into receptacle locations. Customer must furnish conduit, wiring, standard duplex receptacles with metal covers for the beltline, and designer-type receptacles for the base pathway. Power entry can be routed from the ceiling via a Gravitation power pole, or from the floor into a junction box (model HH871500).

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

NOTES:
- Beams and legs specified separately.
- Order power harness separately to corresponding beam length.
- Beams ship with mounting brackets for 8-Trac electrical to be installed in the field.
- Beams ship with internal guides to retain power/data wires during installation (internal wire management).
- 2 ports for electrical and 2 ports for data are provided on each side of the rail, total of 8 ports.
- Electrical in-feed can also be accomplished through an electrical knockout (not data) in the face of the rail using a base in-feed.
- Beam height when installed is 23″H. This height aligns with the Empower® height adjustable trough. Gravitation™ and Coordinate™ can be used as single-sided height adjustable benching.
- 2-Pack metal port covers specified separately to cover unused power/data ports.
- Electrical harnesses, duplexes, and power feeds ordered separately.
- Leveling capability of 1¼″ internal to rail for clean aesthetic.

With in-line connections between beams, one leg can be shared. Requires one more leg than the number of beams.

Specify paint; not available in Putty (L), Platinum Metallic (T1), and Champagne Metallic (T4).

When two rails share a leg, the leg is centered between the legs in the "outer slot". When the leg is positioned **at the end of a run of rails** (i.e., the rail doesn't connect to another rail), the leg will be inset 1⅞″ from the end of the rail, not the end cap, in the "inner slot".

! Power Hub is used when electrical needs to enter at a connection. For change of direction only (not bringing in power) use Universal Connector.

NOTES:
- Hub connectors allow power to enter the beam by bringing it through the bottom of the hub or knocking out the mouse hole in the hub.
- Specify correct hub based on desired location of power entering the beam.

! Power Hub is used when electrical needs to enter at a connection. For change of direction only (not bringing in power) use Universal Connector (HBCONU).

! Hubs are dual use — change of direction "connector" (when choosing L, T, or X hubs) and to bring power to the beam; choose Universal Connector if change of direction is needed **without** bringing power to the beam (HBCONU).

! Power can enter the beam in six different ways.
1. Bring in-feed from floor or wall into end of beam with no cover (see local electrical codes to ensure the use of this solution) — metal flexible (HH871912) or Sealtight (HMP144) conduit available based on code compliance.
2. HH870070 freestanding Power Pole at end of run.
3. Vertebrae Wire Manager (HBVWM) from end of beam.
4. 96″ Power Pole (HB96PP) with beam Power Pole Connectors (HBPP*K).

OVERHEAD AND SHELVES SPECIFYING

SPECIFICATION GUIDELINES

In a panel run, only two overhead storage cabinets or open storage shelves are recommended per panel side. When suspending overhead storage off-module only one storage unit per panel side is allowed.

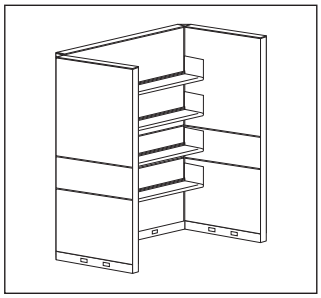

When overhead storage units are suspended from stacking frames, the following guidelines should be adhered to:

A maximum of two overhead storage units can be suspended from each side of stacking frames on any given panel.

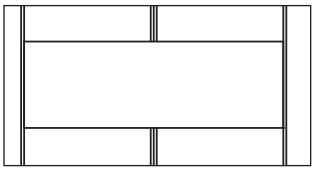

Overhead Storage cabinets and the **Open Shelf** can also be mounted to a maximum height of 65″H on all systems. Voi overheads not to be mounted on Accelerate stackers.

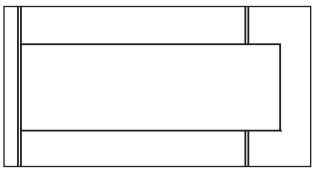

Immediate adjacent panels must be equal height to panels with overhead storage cabinets on them.

No limitation to the number of units on structural frames when units are spaced 12″ apart and when the run is supported with return panels of equal height to the spine wall on each side of storage shelves or overhead storage cabinets.

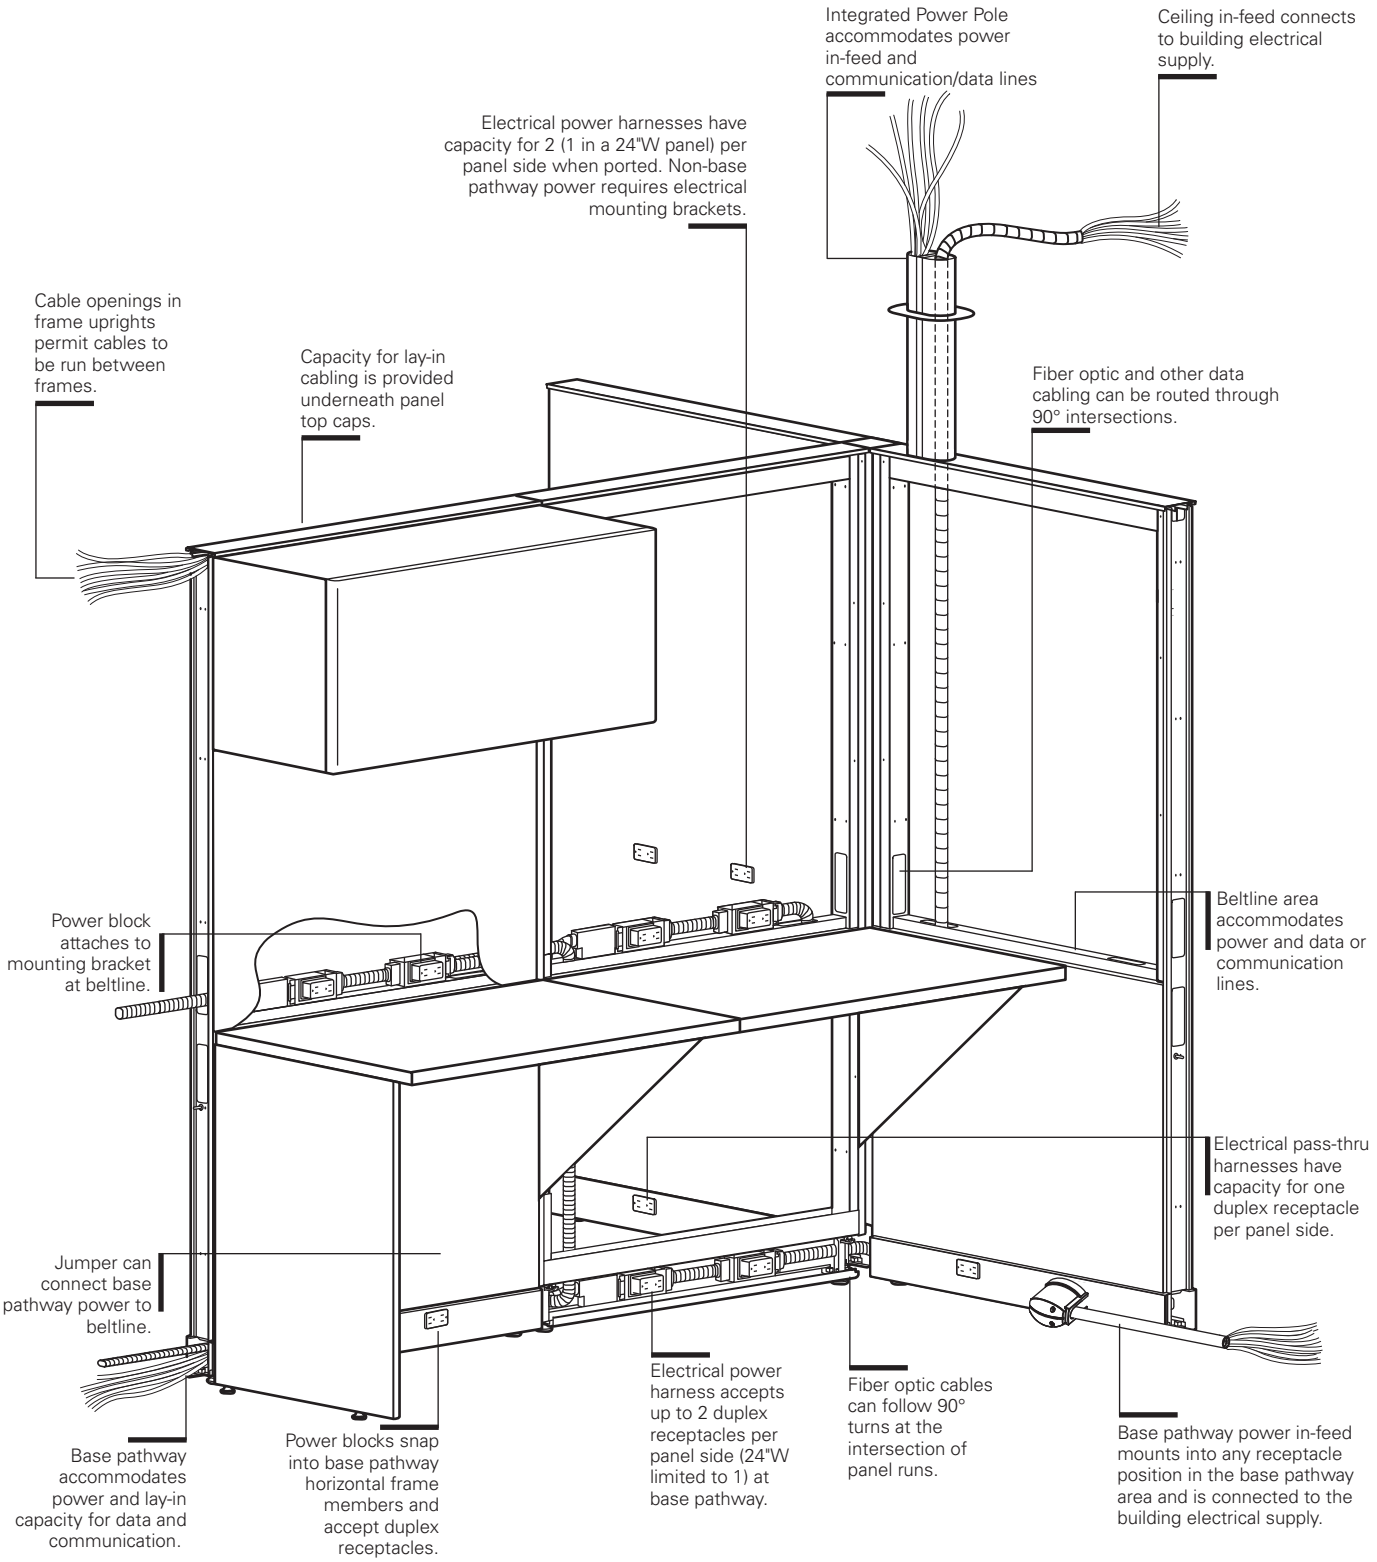

Storage shelf and overhead width must correspond with width of panel(s). It is possible to span two panels when combined panel width equals cabinet or shelf width.

Overhead Cabinets can be mounted on a panel equal to or up to 18″ narrower than cabinet. Not applicable for ETA overheads, Voi overheads, and shelves.

ABOUND®
Electrical and Data

Abound® features capabilities for cable management, including electrical, voice, and data. The 8-wire electrical system can be integrated at base pathway and beltline. The open structure of the frame allows voice and data cables to be routed both vertically and horizontally.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ABOUND® Electrical and Data

THE ABOUND ELECTRICAL SYSTEMS

Abound offers a choice of three electrical systems:

- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals

All three systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian). See pages 546-547 for a detailed explanation of each electrical system.

Abound frames and electrical components are UL Listed. Electrical components are also CSA certified.

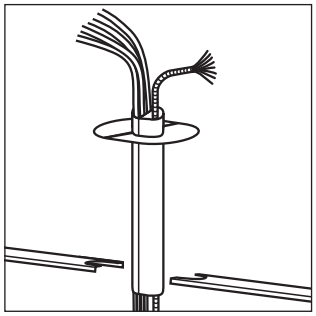

Installation and use of the electrical system, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through cable openings in frame sides.

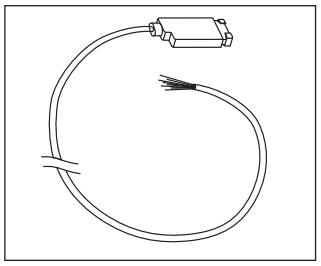

Abound's electrical harnesses are UL listed and are considered raceways themselves as defined by the National Electrical Code. This means there is no separation requirement between the electrical harnesses and communications cables per Sec. 800-52 of the National Electrical Code. Communication cables may be placed next to Abound's electrical components without a metal septum and will still meet the guidelines of the Telecommunications Industry Association for separation of power and data.

IN-FEEDS

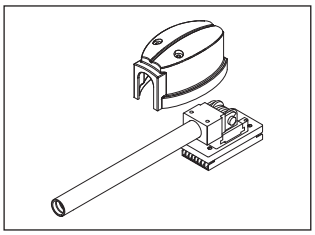

Power in-feed cables deliver power from building to system. In-feed cables are housed in conduit to separate electrical system from communications and data lines.

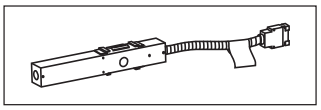

Integrated power and communications poles provide capacity for routing power supply directly through the top of any structural or stacking frame using same width trim/connector kit in place of top cap. Avoid glass or translucent tiles in upper position of frames with integrated power poles. Power pole has a cavity on each side of a center septum. When using a ceiling power in-feed, consider that the in-feed must connect into an electrical harness located in an adjacent panel. (See pages 548-549 for cable capacity.)

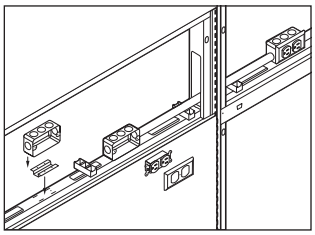

Ceiling power in-feed connects to a prewired electrical harness in the beltline or base pathway, traverses through an adjacent panel and terminates in the junction box at the top of the integrated power pole. For use with integrated power pole models HEP65 and HEP35. No portion of the flex cable can be exposed after installation.

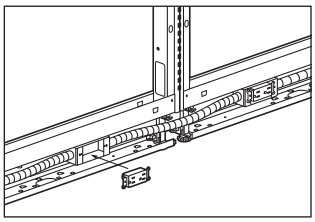

Sealtight base pathway power in-feed attaches to a receptacle opening at the base pathway. A heavy rubber sheathing shields conduit, allowing in-feed to be exposed.

Hardwire (New York Code) power in-feed (model H871400) is used when local electrical codes require hardwire entry. When used in 24″W, 30″W and 36″W panels, power can be routed only in one direction. When used in 42″, 48″W and 60″W panels, an electrical pass-thru cable or harness for that panel width can be used to route power back in the opposite direction. Unit must connect to a power or pass-thru harness positioned in the base pathway area of an adjacent panel. Customer to furnish all cabling and wiring from power entry to power source. Junction box can be positioned at any duplex receptacle location.

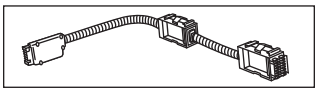

HARDWIRE (CHICAGO CODE) JUNCTION BOX
Wiring harnesses and snap connectors are not allowed in Chicago — base pathways must be comprised of all metallic components. Concealed mounting is the only option at beltline. For the base pathway, junction box (model HH873500) clips directly into receptacle locations. Customer must furnish conduit, wiring, standard duplex receptacles with metal covers for the beltline and designer-type receptacles for the base pathway. Power entry can be routed from the ceiling, via an Abound power pole, or from the floor into a junction box (model HH873500).

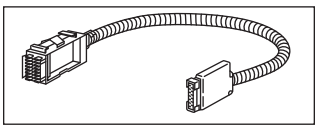

ABOUND® Electrical and Data

POWER

Power blocks on electrical power harness and pass-thru harness accept duplex receptacles.

Electrical power harnesses are used to distribute power in panels. Abound electrical can be located at base pathway or beltline only. Connectors at both ends of power harnesses allow power distribution in either direction.

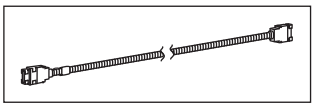

Electrical pass-thru harnesses have capacity to handle one duplex receptacle on each side of the panel when exposed.

A 60″ pass-thru harness can be used to jump up to a single duplex receptacle per side at beltline and connecting to a power harness at base pathway.

Electrical power harnesses and pass-thru cables cannot be routed at 90° at beltline once frames are connected to connector blocks.

Electrical pass-thru cables distribute power through any panel where receptacles are not required. Cable length cannot be stretched.

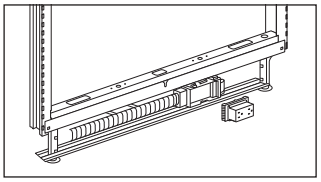

Electrical jumper cables connect power from base pathway or beltline to a harness located on any horizontal member as needed. Jumper cable plugs into power block end of electrical power harness or electrical pass-thru harness.

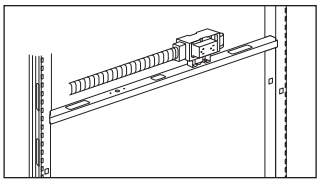

Model HH871366 is 66″ to jump up to 30 inches vertically – base pathway to beltline or beltline to base pathway.

Jumper can also be used from beltline to adjacent beltline at 90° juncture.

POWER BLOCKS

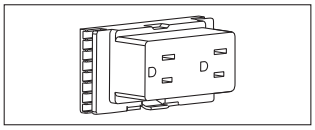

Base pathway mounting: Power blocks snap directly onto brackets in base pathway area.

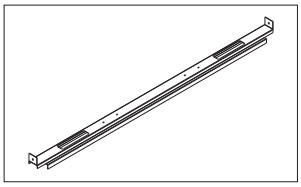

Beltline electrical mounting: For ported receptacles at beltline mount power blocks onto Electrical Mounting Brackets which screw into the panel frame. Electrical Mounting Brackets must be ordered separately. Data/Electrical Port Tiles must be used where exposed receptacles will be located.

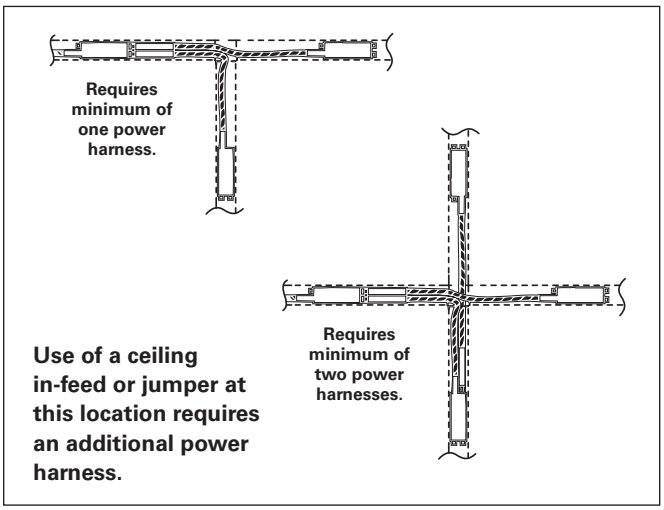

RECEPTACLES

Duplex receptacles snap into power blocks of power harnesses or pass-through harnesses. Duplexes are available in multiple colors. Each receptacle is labeled to indicate which circuit it will be connected to.

OPTIONAL STIFFENER SUPPORT
Stiffener supports can be used to provide additional rigidity to a panel when fabric tiles are on both sides of the frame. May also be used for routing power/data at non-standard heights.

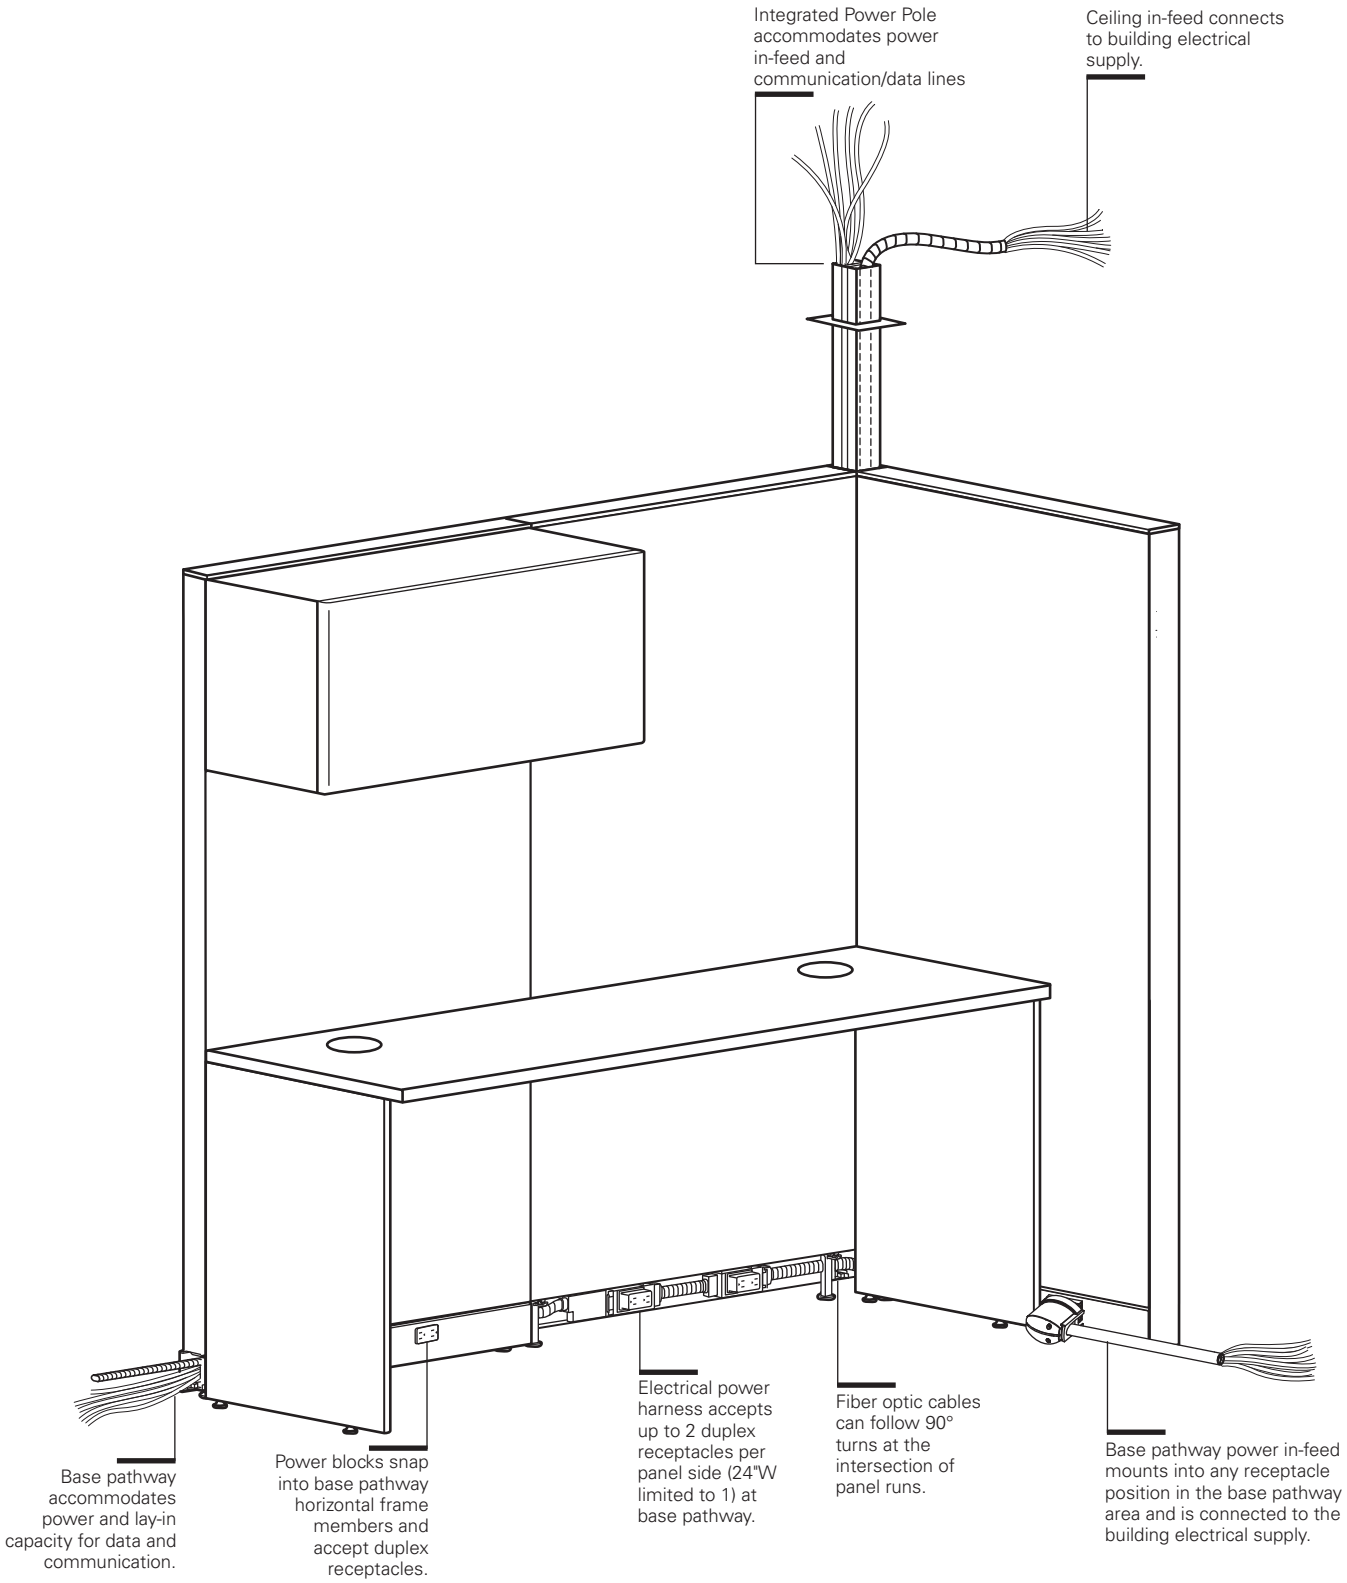

All electrical power harnesses and pass-thru harnesses will stretch 3½″, allowing them to span “T” and “X” intersections and “S” extended straight connections.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ACCELERATE®
Electrical and Data

Accelerate® features capabilities for cable management, including electrical, voice, and data. The 8-wire electrical system can be integrated at base pathway. See Systems electrical pages 559-565 for electrical models to be used with Accelerate® Systems products. See page 384 for Abound® frame horizontal and vertical wire capacity and page 549 for base pathway capacity.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

ACCELERATE®
Electrical and Data

THE ACCELERATE ELECTRICAL SYSTEMS

Accelerate offers a choice of three electrical systems:

- Four-circuit, 3 + 1
- Four-circuit, 2 + 2
- Three-circuit, separate neutrals

All three systems utilize an 8-wire electrical system, rated at 20 amps per circuit (15 amps Canadian). See pages 546-547 for a detailed explanation of each electrical system.

Accelerate panels and electrical components are UL Listed. Electrical components are also CSA certified.

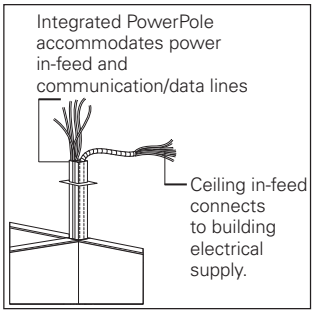

Installation and use of the electrical system, the number of receptacles used on a given circuit and connections to the building power supply should be in compliance with all local and national electrical codes.

Caution: Electrical equipment cords or extension cords MUST NOT BE ROUTED through cable openings in frame sides.

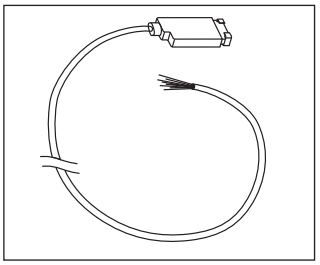

Accelerate's electrical harnesses are UL listed and are considered raceways themselves as defined by the National Electrical Code. This means there is no separation requirement between the electrical harnesses and communications cables per Sec. 800-52 of the National Electrical Code. Communication cables may be placed next to Accelerate's electrical components without a metal septum and will still meet the guidelines of the Telecommunications Industry Association for separation of power and data.

For use with integrated power pole models HECPP. No portion of the flex cable can be exposed after installation.

Sealtight base pathway power in-feed attaches to a receptacle opening at the base pathway. A heavy rubber sheathing shields conduit, allowing in-feed to be exposed.

Hardwire (New York Code) power in-feed (model H871400) is used when local electrical codes require hardwire entry. When used in 24″W, 30″W and 36″W panels, power can be routed only in one direction. DUPLEX RECEPTACLES

For Duplex Receptacle models that can be used on Accelerate® panel systems, please see page 562.

All Systems electrical components can be found on pages 559-565.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

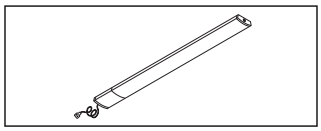

LIGHTING

Task lights can be recessed under storage cabinets or storage shelves.

Task lights in four sizes are available to correspond to cabinet or shelf width. They have 9′ power cords in black, connected in the right rear corner. All models feature LED light strip for improved light quality. Task lights with a fused plug to meet Chicago electrical code are also available.

Recommendation: Provide a separate circuit for task lights for proper long-term operation without RF interference to computers that may be in use.

LED TASK LIGHTS

No finish specification required. Attaches magnetically to underside of overhead storage, or attaches with provided screws.

Occupancy sensor attaches to a single or starter LED light and will automatically turn the light off after no motion is detected for 30 minutes.

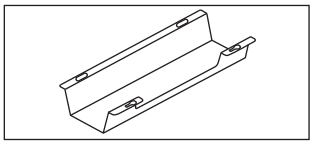

Just like all the LED light models, the occupancy sensor features a soft-touch on/off switch. LED task lights have a lifetime of 50,000 hours and have a dimmer feature that allows the user to adjust the amount of light output.

Daisy chain options are available. To use the daisy chain application, must start with model HLED17A or HLED31A.

VOICE/DATA RECEPTACLES

Abound not only provides space for large volumes of voice and data cables, it also offers several means of mounting commercially available voice and data components.

Commercially available modular data faceplates can be mounted in vacant base receptacle openings or can be mounted in data/electrical port tiles above or below the worksurface.

Cable management troughs attach to worksurfaces with provided screws. The graphite metal troughs are designed with cord access cut outs. These cut outs give users access to inside the trough without having to detach it from the worksurface.

SYSTEMS
ELECTRICAL SPECIFYING INFORMATION

To Order:

1. Determine which electrical system you will use after consulting your electrician and computer support personnel:
   - **The Four-circuit system (4-Hot/2-Neutral/2-Ground)**
     - **3 + 1 option**
     - **2 + 2 option**
   - **The Three-circuit system (3-Hot/3-Neutral/2-Ground)**
2. Determine location, quantity and circuit of duplexes.
3. Determine the appropriate choice and use of Isolated, Isolated/Dedicated and Separate Neutral circuits.
4. Specify appropriate Power Harnesses* and Pass-Thru Cables.*
5. Determine the location, quantity and type of Power In-feed needed.

* Select Power Harness models (HH8712XX) and Pass-Thru Cables (HH8711XX) with the last two digits being 1" (or 2") smaller than the associate panel width.

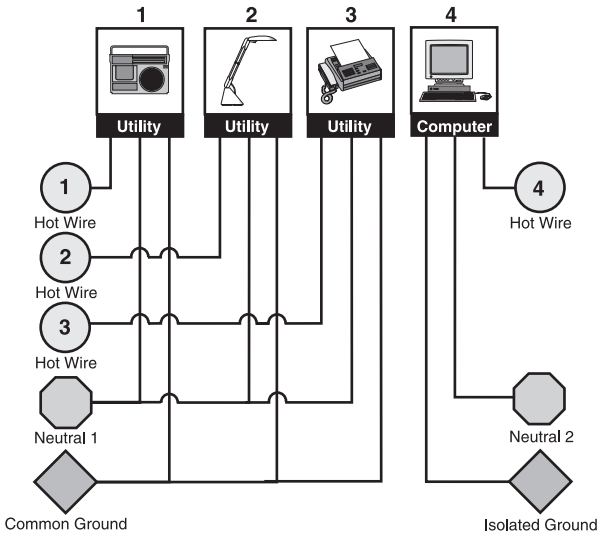

Electrical System Options

The four-circuit, eight-wire electrical system is widely specified and trusted by hundreds of thousands of end-users. This proven system delivers four circuits for every power in-feed in either a 3 + 1 or 2 + 2 configuration. The isolated/dedicated circuits are ideal for sensitive computing equipment, while the common circuits are suitable for faxes, copiers, task lights and other peripherals.

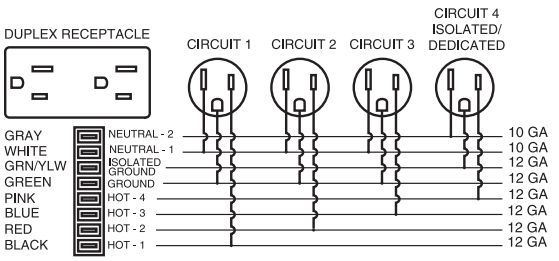

Both the 3 + 1 and 2 + 2 systems use the same pre-wired components, making it easy to adjust as electrical needs change.

You can also choose a three-circuit, eight-wire system that has a dedicated neutral for every hot circuit. The three-circuit components have model numbers with an "A" suffix and appear in a gray box in this pricer.

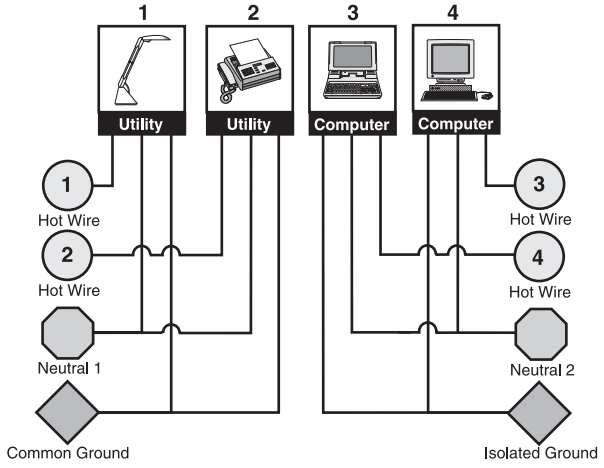

Four-circuit, 3 + 1 Receptacle Option

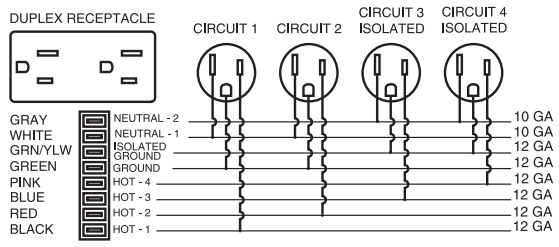

The 3 + 1 option is the electrical standard used by The HON Company for many years in most of their systems products. This wiring option provides three utility circuits plus an isolated/dedicated circuit for more sensitive equipment.

Four-circuit, 2 + 2 Receptacle Option

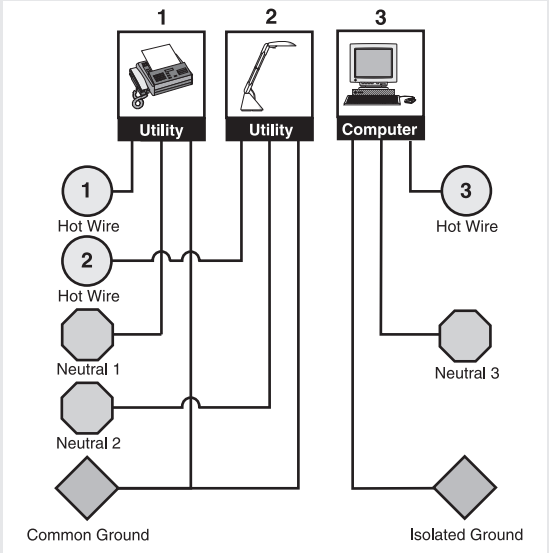

The 2 + 2 option is a wiring option that provides two utility circuits and two isolated circuits for more extensive computer usage applications.

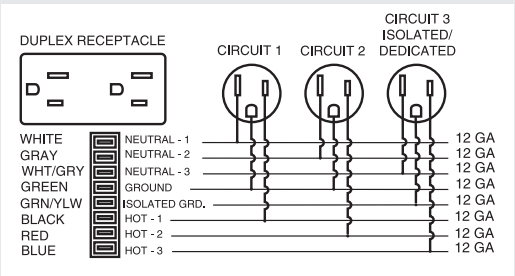

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

SYSTEMS
ELECTRICAL SPECIFYING INFORMATION

Three-circuit, separate neutrals

The Three-circuit, separate neutrals configuration is a wiring option that provides separate neutrals for each of the three circuits. Two circuits share a common ground, and one circuit is isolated/dedicated. The three-circuit components have model numbers with an "A" suffix and appear in a gray box in this pricer.

Two 8-wire, 20 AMP (15 AMP Canadian) electrical systems are offered

Notes:
- Four-circuit components and three-circuit components (with suffix "A") cannot be used together.

ELECTRICAL SPECIFYING INFORMATION

- Abound and Accelerate panels are UL listed.
- Electrical components are UL Listed and CSA Certified.
- It is the customer's responsibility to ensure that use of the pre-wired electrical system, the number of receptacles used on a given circuit, and connection to a building power source, be in compliance with all local and national electrical codes.
- Contact Customer Service for additional information.
- Pedestals and Lateral Files, positioned under worksurfaces, may render some receptacles inaccessible, and may prohibit use of grommets.
- Four-circuit components and Three-circuit components (with suffix "A") cannot be used together. See pages 546-547.

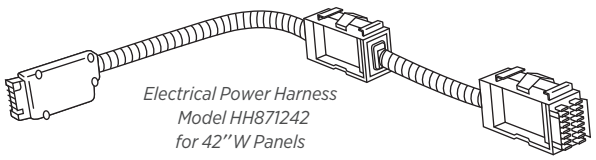

! A licensed electrician must make connections to a building electrical supply.

! Three-way panel connections require at least one power harness.

! 4-way panel connections require at least two power harnesses.

Definition of components:

Electrical Power Harness

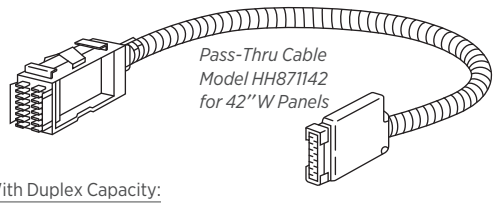

Electrical Power Harness
Model HH871242
for 42"W Panels

- Used to distribute power in panels.
- Power distribution in either direction.
- Specify Power Harness to match panel width.
- Double-sided: receptacles can be inserted into both sides of Power Blocks.

! Three-way panel connections require at least one power harness.

! 4-way panel connections require at least two power harnesses.

Electrical Pass-Thru Cables

Pass-Thru Cable
Model HH871142
for 42"W Panels

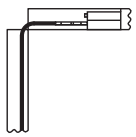

Pass-Thru Cable With Duplex Capacity:

- Use in panels where multiple receptacles are not required.
- Added feature: has capacity for one receptacle on each side of a panel. Feature offers future expansion and is an alternative to Power Harnesses.

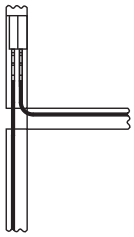

Various Electrical Layouts

Straight Line

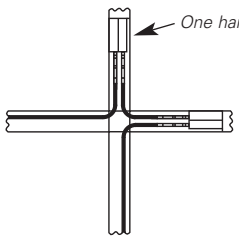

90 Degree Corner

"T" Connection

When ending power in two return panels, wiring pigtails must be returned to original panel run.

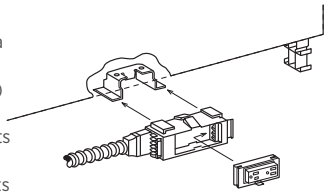

"X" or Cross Connection

To power a 4-way panel connection from one direction, specify at least two double block harnesses.

Duplex Receptacles

- 15 amp outlet configuration.
- Models HH871601 and HH871601A have a 20 amp outlet configuration.
- Fit back-to-back into the Power Block(s) of Power and Pass-Thru Harnesses.
- Labeled with the provided circuit. Circuits connected to the Isolated Ground are identified with an orange triangle; circuits that do not share a neutral or ground have an orange circuit number.

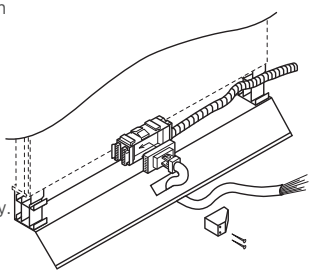

Power In-Feed (Base) Models HH879072 (72") and HH879168 (168")

- Used to connect the panel electrical system to the building electrical supply at a power block.
- Plugs into any receptacle position; can be rotated Left or Right.
- Conduit is UL listed Black Liquid-tight conduit (outside diameter is 7/8").

! A licensed electrician must make connections to a building electrical supply.

! Must be positioned through a receptacle opening in the baserail cover, prior to an electrician connecting to the power source.

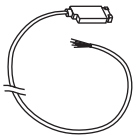

Power In-Feed Model (Ceiling) HH871912 and HH871918

- Used to connect the panel electrical system to the building electrical supply.

! A licensed electrician must make connections to a building electrical supply.

! Model uses UL recognized flex-cable conduit — no portion can be left exposed (i.e., must be in a power pole).

! Power Pole must be ordered separately.

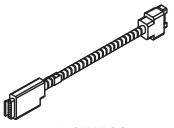

HH871972

Note: In-feed cables listed above may be field-cut to desired length.

Electrical Jumper Cables

! When used to connect power between the base pathway and the beltline area, the jumper must be connected to a power block at one end of a run, routed into an adjacent panel that does not contain a power harness, then routed back into the panel containing a power harness or pass-thru cable and connected to a power harness in the other pathway.

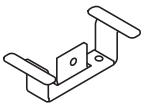

HH871366

Abound Electrical Mounting Brackets

- Use to mount ported receptacles at beltline.
- Screw into the panel frame.

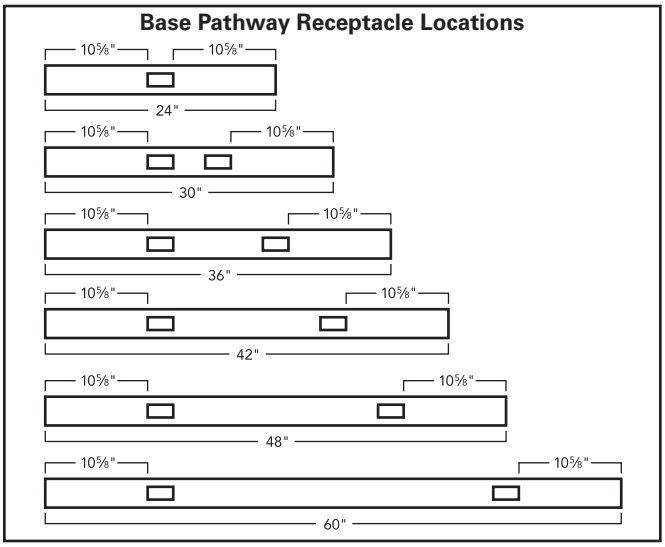

! One mounting bracket required at beltline for each 24"W pass-thru or power harness. Two required for 30"-60"W power harness.

HH8988EBN

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

WORKING WITH CABLE MANAGEMENT

Circuit Usage

Strategy 1
Circuits to Equipment
Assign specific uses for each of the circuits:

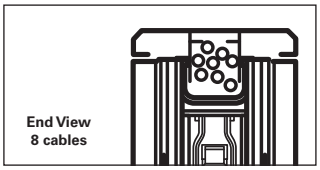

- For example, in a four-circuit system:
  Circuit 1 — Calculators, fans, etc.
  Circuit 2 — Task lights (could be wired to wall switch)
  Circuit 3 — Computer monitors
  Circuit 4 — CPUs

Strategy 2
Circuits to Workstations
Assign specific workstations to each of the three available circuits. Use circuit 4 for power-sensitive electronic equipment.

Placement of pedestals and lateral files may render some duplex locations inaccessible. Pedestal placement may also affect compatibility with pull-up receptacles.

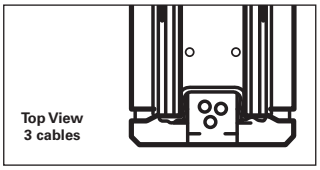

Abound® Lay-in Cable Capacity

The top and base pathway allow continuous voice and data lines to run through and between panels without interruption. Lay-in is provided for environments where systems furniture or cabling are subject to frequent change. All capacities are for Cat 6 cable with a 0.25″ diameter.

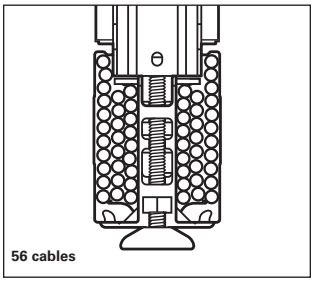

Top pathway accepts up to 8 voice/data cables (.25″ dia.).

Abound® Lay-In Cable Capacity

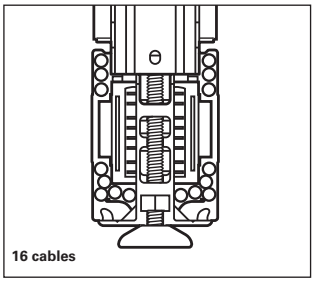

Variable height junctions accept up to 3 voice/data cables (.25″ dia.).

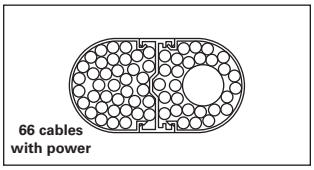

Abound® Cable Capacity

Abound® **base pathway** accepts up to 56 voice/data cables (.25″ dia.) (6.03 sq. in.) at 60% fill.

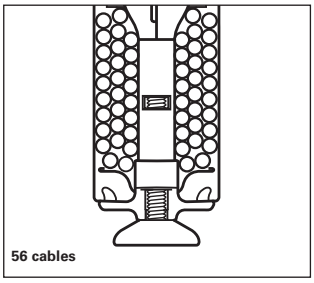

When electrical system shares base pathway, the cable capacity in Abound is reduced to 16 cables (2.25 sq. in.). Cable quantities listed are at 60% fill ratio.

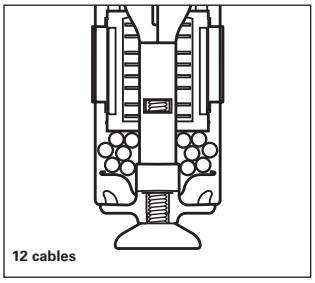

Cable capacity of the power pole, in addition to electrical in-feed is 2.79 sq. in. on one side and 2.91 sq. in. on the other for a total capacity of 66 cables with power of .25″ diameter.

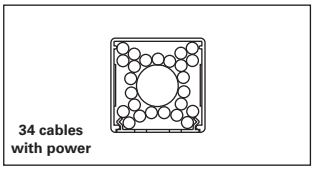

Accelerate® Cable Capacity

Accelerate® **base pathway** accepts up to 56 voice/data cables (.25″ dia.) (6.27 sq. in.) at 60% fill.

When the electrical system shares the base pathway, the cable capacity in Accelerate® is reduced to 12 cables (.25″ dia.) (2.03 sq. in.) at 60% fill ratio.

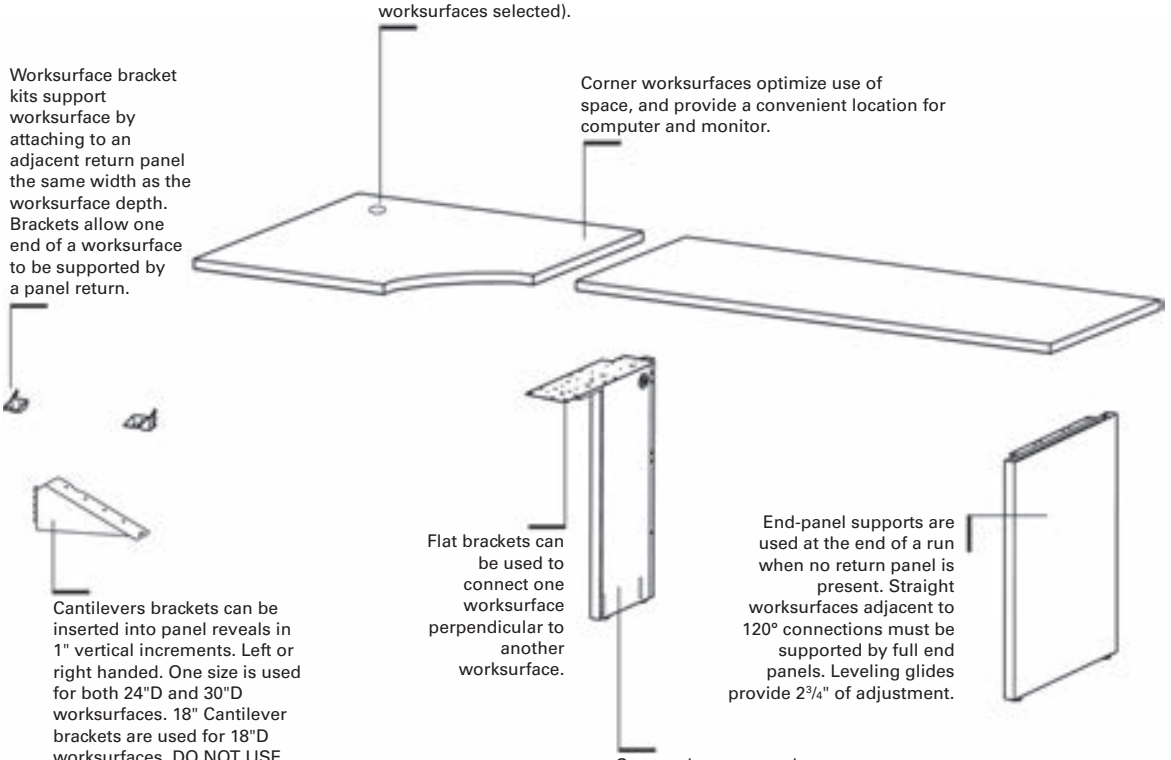

Integrated Power Pole: 2″ x 2″ overall, 3.3″^{2} interior accommodates a total of 34 cables with power of .25″ diameter. Available in two heights: 6′6″ or 13′, the power pole connects via the universal connector and the overall height is the sum of the connector and the power pole. Constructed of aluminum with a powder coat paint finish in the specified color. Power pole requires a Ceiling In-Feed.

Ceiling In-Feeds: UL listed as raceways. This means the electrical components are completely shielded and meet any requirements for separation of electrical components and communications cables per Section 800-52 of the National Electrical Code.

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

SYSTEMS
Working with Worksurfaces and Supports

Worksurfaces are 1⅛" thick with particle-board core and with top surfaces finished in high-pressure laminate. Bottom surfaces are covered with a backer sheet.

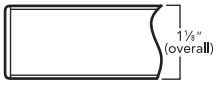

Primary worksurfaces are available in 18", 24" and 30" depths. Nominal worksurface width is equal to nominal panel width. Other support hardware is ordered separately.

Corner worksurfaces with woodgrain laminate have grain direction diagonal to adjacent worksurfaces. All other support hardware is ordered separately.

Wire management grommets are standard in most worksurfaces. Worksurfaces less than 48"W have one grommet centered on edge of worksurface. Rectangular worksurfaces over 42"W have two grommets. Peninsulas have one grommet. Corner Worksurfaces have one grommet (one on each back edge). D-Shaped worksurfaces and countertops do not have grommets.

Edgeband is available on laminate tops in standard colors (customer specified) to match or complement solid, patterned, or woodgrain laminates.

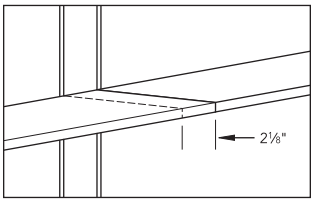

Edgeband Profile

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

SYSTEMS
Working with Worksurfaces and Supports

Optional width worksurfaces are available for use with panel runs having a TEE or Extended Straight connection.

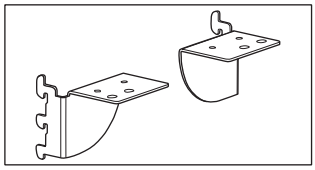

Worksurfaces can be configured at 29½″ with end-panel supports and support legs, or at various heights on 1″ increments using specific product configurations.

Worksurface support options include:
Open leg models
Support column
Flat brackets
Worksurface bracket kit
Cantilever bracket
Universal support leg
End-panel support
Freestanding pedestal

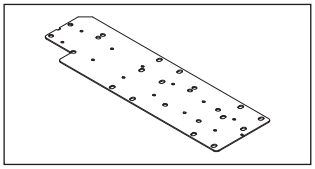

Other worksurface supports include:
Support columns
External channel supports
Support pedestals
Pedestals with panel-to-pedestal bracket
Desking freestanding shared leg

Support Guidelines:

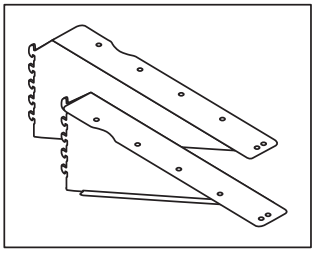

- Unsupported panel runs greater than 72″W need floor support for improved stability.
- Worksurface bracket kit should be used to tie panels to worksurfaces for added stability.
- A panel run without a return needs a floor support.
- Unsupported worksurface spans of 60″W-84″W require an external worksurface support channel. It is recommended for 48″W-60″W.
- Cantilevers only to be used on worksurface runs 48″W or less.

Worksurface bracket kit allows one end of a worksurface to be supported by a return panel. Return panel width must be the same as the depth of the worksurface.

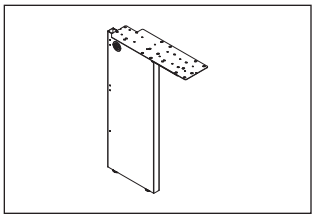

Flat brackets can be used to connect one worksurface perpendicular to another worksurface.

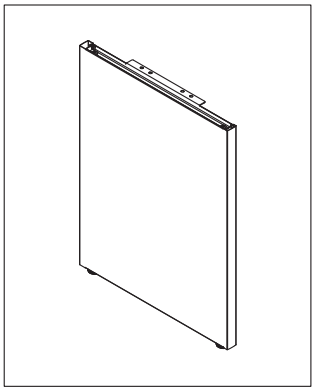

Cantilever brackets are left or right handed. They can be inserted into panel reveals in 1″ vertical increments. One size is used for both 24″ and 30″D worksurfaces. 18″ Cantilever brackets are used for 18″D worksurfaces. Both left and right brackets are required in shared applications.

Important: Do not use cantilever brackets at the end of a worksurface where no 90° return panel is positioned.

- Do not use to support worksurfaces from which a hanging pedestal is suspended, or which a peninsula worksurface is attached.
- Do not use to support worksurfaces supported with permanent wall hanger kit.

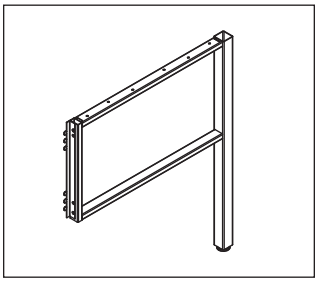

Universal support legs are used to support worksurfaces *only* in a shared position.

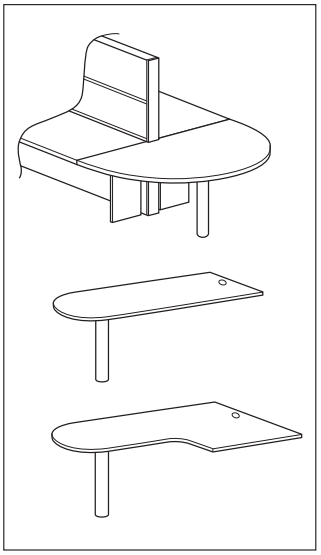

End-panel supports are used in place of return panels at the end of worksurface runs. Straight worksurfaces adjacent to 120° connections must be supported by full end panels. End-panel supports are ordered for right- or left-handed application. Leveling glides provide 1½″ of adjustment.

SYSTEMS
Working with Worksurfaces and Supports

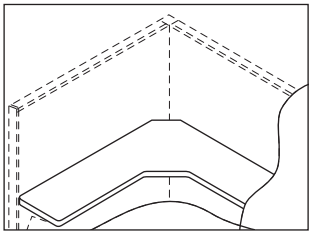

Open Leg models are used to support various worksurface configurations and include attaching hardware and leveling glides.

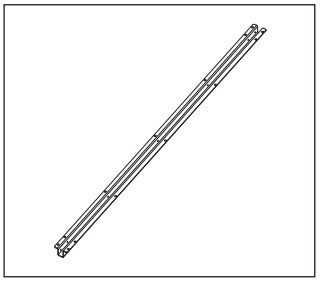

D-Shaped, Peninsula and Jetty worksurfaces require support columns (ordered separately).

Countertops are available in straight or corner configurations.

Corner shelves are available in Edgeband. Attachment brackets are included.

- Unsupported worksurface spans of 60″W-84″W require an external worksurface support channel. It is recommended for 48″W-60″W.

- Refer to Worksurface Supports, pages 582-586.

Does NOT include a rear support bracket. If rear support bracket is needed, order HWSB2.

Panel-hung application requires two panels of corresponding width joined at 90°.

When a run of worksurfaces equals or exceeds 6 feet, a floor support is required for worksurface structural assurance.

60″W, 66″W and 72″W worksurfaces require one or more of the following: worksurface support brackets, end panel, external channel universal support leg or pedestal support in conjunction with cantilever brackets.

All worksurfaces with an unsupported span of 54″ or larger require the use of an external channel. See table on page 570 for required length by application.

OVERVIEW OF PERSONAL STORAGE AND PEDESTALS

LATERAL FILES
Advantages:
a) The most efficient means of conventional filing; b) Ideal for active filing in workstations, where higher volume capacity is necessary and retrieval is frequent

Considerations:
2-drawer steel lateral files fit under standard-height worksurfaces when using panel systems.

VERTICAL FILES
Advantages:
a) Economical; b) The most widely used filing method; c) requires minimal floor space

Considerations:
Vertical files are best suited for long-term storage, where retrieval is less frequent. For larger banks of files, lateral files are more space-efficient than vertical files.

BOOKCASES
Advantages:
a) These units are ideal for binders, reference books or other items;
b) Available with your choice of fixed or movable shelves

Considerations:
If working with panel systems, it is more attractive to specify units that are lower than the panel height.

FILING TECHNIQUES

Type	Standing Files	Hanging Files
Advantages	Inexpensive. Uses existing file folders.	Easier organization and identification of the file folders. Files viewed from top. Remaining files hold their place when folders are removed. Easier to re-stock.

CONTAIN® DIGITAL LOCK SPECIFICATIONS

Digital Keypad Lock Specification Information for Contain® Pedestals, Credenzas, Personal Files, Lateral Files, and Towers

Right-Hand Keypad Lock

Left-Hand Keypad Lock

The digital keypad lock option helps modernize the workspace by eliminating the need to carry physical keys. The digital lock feature provides an alternative to standard lock and key, allowing users to simply input a code to unlock their Contain® storage unit. The digital keypad also supports shared applications where workstations or storage units support multiple users. These locks ship in "shared mode" by default; shared mode indicates that the lock will "forget" the paired 4-digit code after the lock is opened, allowing the unit to be used by multiple users.

❗ Order at least one Programming Key and Manager Key per install.

Digital Keypad Locks:

- Offered on all Contain® pedestal and undermount models.
- Ship factory installed.
- Offered in a brushed nickel finish.
- Digital keypad lock requires input of a user-selected 4-digit code.
- Digital keypad locks are powered using 2 premium lithium CR2032 batteries.
- Battery life is dependent on the frequency of operation but can last up to 5-7 years.
- **Every digital keypad installation site will require *one* Programming Key and *at least one* Manager Key, sold separately.**

Programming Key

- A Programming Key is a device used to initialize locks out of factory default mode and register Manager Keys to the locks.
- Only one Programming Key should be specified per installation site because multiple Programming Keys are not compatible with each other.
- Add-on digital lock orders should be programmed with the original Programming Key.
- Programming Key is the same key as Contain® Digilocks and can work across both Contain® and Fuse™.

Manager Key

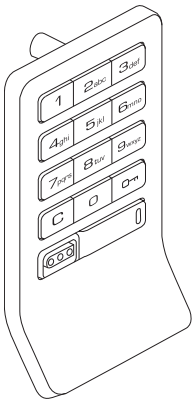

- A Manager Key is used to bypass a locked unit; this operates as the "master key" and it is recommended that building facilitators have at least one Manager Key.
- Up to 6 Manager Keys may be registered to each lock.
- Manager Keys provide external power to locks in case of battery failure.

CONTAIN® DIGITAL LOCK SPECIFICATIONS

Digital Keypad & RFID Lock Specification Information for Contain® Lockers

Keypad Lock Pull

RFID Lock Pull

The digital keypad and RFID lock options support applications where workstations or storage areas are shared by multiple users. This is an alternative to a standard lock and key. This feature facilitates the use of storage by multiple users through eliminating the need to keep and hand-off physical keys. These locks ship in "shared mode" by default; shared mode indicates that the lock will "forget" the paired 4-digit code or RFID badge after the lock is opened, allowing the unit to be used by multiple users.

Order at least one Programming Key and Manager Key per install.

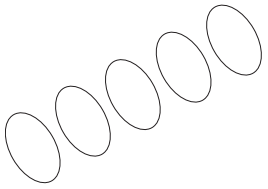

Digital Keypad & RFID Locks:

- Offered on Contain® lockers.
- Ship factory installed.
- Integral Pull/Lock design replaces a specified pull on eLock models.
- Offered in a polished silver finish.
- Digital keypad lock requires input of a user-selected 4-digit code.
- RFID lock requires a compatible RFID card or sticker.
- Digital keypad locks and RFID locks are powered using 4 premium AA batteries.
- Battery life is dependent on the frequency of operation but can last up to 5-7 years.

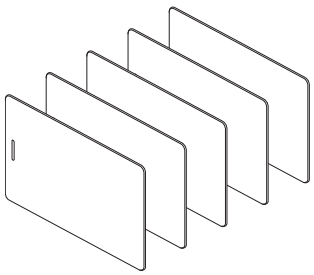

RFID locks require user to present a compatible RFID card or sticker to the lock in order to gain access. This is the same technology as "badge" systems that allows employers to grant employees with cards that can be scanned to gain access to entrances and buildings. HON locks *may or may not be* compatible with these existing badge systems.

- For existing RFID badge system compatibility, badges must operate on a 13.56 MHz frequency with both iClass (ISO 15693) and Mifare (ISO 14443).
- IF existing badge system is not compatible with 13.56 MHz frequency, compatible RFID badges or RFID stickers are sold separately as an accessory model.

RFID lockers are available in Shared Use and can not be assigned a specific RFID card to permanently access the lock. Instead, the lock is assigned to the last RFID card that was used to lock it. Once a card is used to lock the unit, only that card can then be used to unlock it. After it is unlocked, the lock will then be unassigned until the next RFID card is used to lock it. Similar to how normal gym lockers would work.

RFID Lock Pull

RFID Cards

Digital Lock Accessory Models (page 656)

- RFID-compatible cards and stickers are sold as accessory models in increments of 5, 25, or 100.
- RFID cards are plain white and have a lanyard cut.
- RFID stickers are plain white, approximately 1" in diameter and may be added to the back of an existing badge or employee identification card.
- **Every digital keypad or RFID installation site will require *one* Programming Key and *at least one* Manager Key, sold separately.**

Programming Key

- A Programming Key is a device used to initialize locks out of factory default mode and register Manager Keys to the locks.
- Only one Programming Key should be specified per installation site because multiple Programming Keys are not compatible with each other.

FUSE™ DIGITAL LOCK SPECIFICATIONS

Digital Keypad Lock Specification Information for Fuse™ Pedestals

Front **Back**

Keypad Lock

The digital keypad lock option helps modernize the workspace by eliminating the need to carry physical keys. The digital lock feature provides an alternative to standard lock and key, allowing users to simply input a code to unlock their Fuse™ storage unit. The digital keypad also supports shared applications where workstations or storage units support multiple users. These locks ship in "shared mode" by default; shared mode indicates that the lock will "forget" the paired 4-digit code after the lock is opened, allowing the unit to be used by multiple users.

Order at least one Programming Key and Manager Key per install.

Digital Keypad Locks:

- Offered on all Fuse™ pedestal and undermount models.
- Ship factory installed.
- Offered in a brushed nickel finish.
- Digital keypad lock requires input of a user-selected 4-digit code.
- Digital keypad locks are powered using 2 premium lithium CR2032 batteries.
- Battery life is dependent on the frequency of operation but can last up to 5-7 years.
- **Every digital keypad installation site will require *one* Programming Key and *at least one* Manager Key, sold separately.**

Programming Key

- A Programming Key is a device used to initialize locks out of factory default mode and register Manager Keys to the locks.
- Only one Programming Key should be specified per installation site because multiple Programming Keys are not compatible with each other.
- Add-on digital lock orders should be programmed with the original Programming Key.
- Programming Key is the same key as Contain® Digilocks and can work across both Contain® and Fuse™.

Manager Key

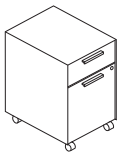

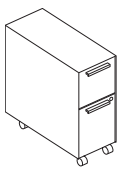

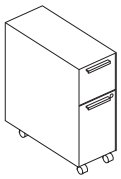

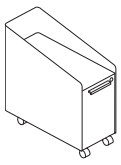

- A Manager Key is used to bypass a locked unit; this operates as the "master key" and it is recommended that building facilitators have at least one Manager Key.
- Up to 6 Manager Keys may be registered to each lock.
- Manager Keys provide external power to locks in case of battery failure.

STORAGE ISLANDS SPECIFYING GUIDE

Top

Available in single depth (18″) or double depth (36″) surface.

- Select dimensionality based on configuration and the number of undersurface units being spanned.

End Panel

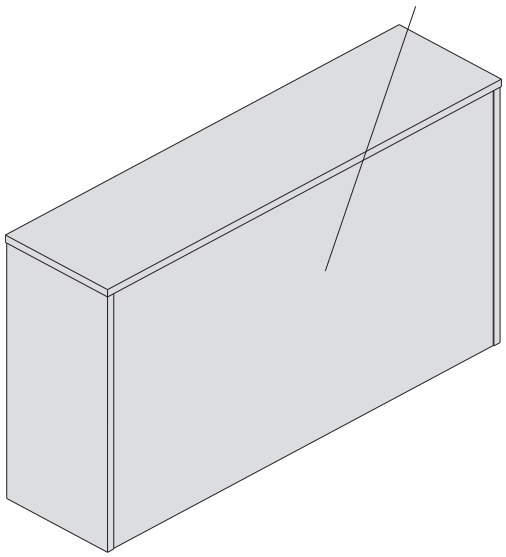

Specified in both 18″D and 36″D applications to conceal the sides of storage units.

Septum

Specified only in double depth (36″) applications. Laminate septum designed to cover the back of storage units and create a clean countertop application. Septum must be connected to end panels or an adjacent septum.

Back

Specified only in 18″D configurations to conceal the back of storage units.

Specifying Islands Top

1. Select top depth.
   - Single (18″) or double (36″)
2. Select desired Islands configuration.
   - Top only
   - Top + End Panels
   - Top + End Panels + Back or Septum
3. Determine top width.
   - Identify the number of side-to-side storage units the top will cover. This number represents the number of **spans**.

* Note: Front-to-back units do not factor into number of spans. Although top or end panels accept a septum, it is not required to add septum based on application.

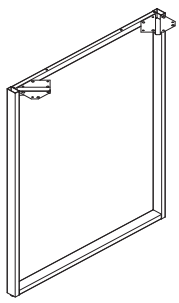

Specifying End Panels, Back, or Septum

4. Identify storage units Islands will wrap. This determines correct height.
   - Contain® Height = 40⅘″
   - Flagship®/Brigade® Height = 38⅘″
5. Specify additional components to complete your Islands configuration.
   - End panels, back, or septum
   - The width and number of units spanned on the septum must match the width and number of units spanned on the top.

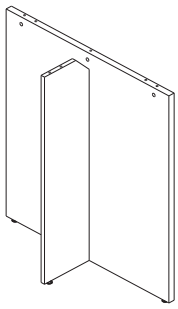

Peninsula Applications

Specify an O-Leg or laminate return panel to create an open span collaboration space.

* Note: Under-surface storage must support at least one side of the open span.

O-Leg

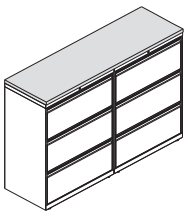

Return Panel

O-Leg & Return Panel

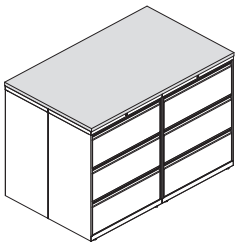

Specified to support open span top in Islands peninsula configuration.

STORAGE ISLANDS SPECIFYING GUIDE

WORKING WITH STORAGE ISLANDS WITH CONTAIN® OR FLAGSHIP®/BRIGADE® PRODUCT LINES

Storage Islands come in 2″ height variances designed to be used with Contain® or Flagship®/Brigade® product lines. Worksurfaces and end supports are made of 1¼″ particleboard with 2mm edgeband and laminate on both sides of all surfaces. Center septums are made of ¾″ particleboard with 0.5mm edgeband and laminate on both sides.

	Depths
18″D No Back, No End Panels	18.19
18″D No Back, With End Panels	18.44
18″D Back and End Panels	19.455
36″D No Back, No End Panels	36.69
36″D End Panels	

End Panel Sizes		
	Depths	Height
18″D No Back, Contain®	18.19	40.8
18″D No Back, Flagship®		38.8
18″D With Back, Contain®	19.20	40.8
18″D With Back, Flagship®		38.8
36″D End Panels, Contain®	36.44	40.8
36″D End Panels, Flagship®		38.8

Countertop Application

- When specifying a countertop application, the end of a septum cannot be left open. The septum must connect to an end panel or adjacent septum.

Peninsula Application

- Peninsula applications can only be completed with 36″D worksurfaces and end panels.
- Back-to-back storage specified without an end panel will result in an ~⅜″ gap between storage units.
- In a peninsula application, one end of the worksurface must be supported by undersurface storage. The opposing end can be supported with an O-leg or laminate end panel.

- Unsupported surface runs greater than 54″W require the installation of an external stiffener.
- External stiffener extends 1½″ below the worksurface.
- For 36″W surfaces, 2 external stiffeners are needed on the underneath side of the worksurface.

	Width Sizes						
	S1	S2	S3	S4	S5	S6	S7
No End Panels	84.00″	S1 + 0.125	S1 + 0.25	S1 + 0.375	S1 + 0.5	S1 + 0.625	S1 + 0.75
1 End Panel	85.372″						
2 End Panels	86.744″						

*S1 spans a single storage unit, which is noted at the end of the model number. Start with the S1 number displayed in the table above. Depending on your Islands configuration, the top width increases accordingly based on the 2 factors below.

1). The number of end panels you attach to the worksurface.
2). The number of side-to-side storage units the surface spans.

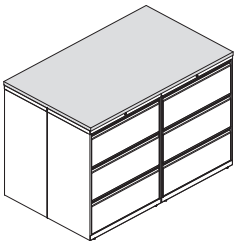

NOTES:

- Use the width of the worksurface you select. Models correspond to the correct surface width.
- Span represents the total number of side-to-side units. Front-to-back units do not factor into number of units spanned.

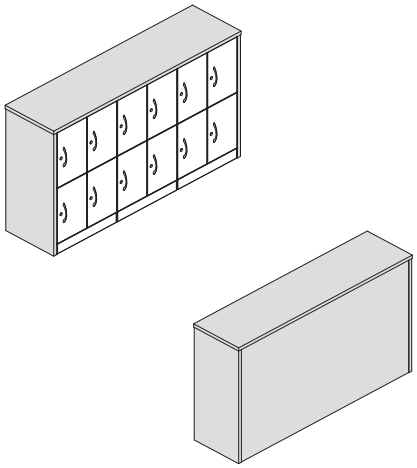

Effective October 13, 2026, HON will apply a 6.5% surcharge to all orders.

- Removable lock core can be changed as security needs require.
- Leveling glides compensate for uneven floors.
- Heavy-duty Steel ball-bearing drawer suspensions operate easily and quietly.
- Four vertical reinforcements keep the cabinet sturdy and the drawers gliding smoothly.
- Drawer handle design coordinates with HON Metro Classic Steel desks.

NOTES:
The collection's Diad, Hexad, and Triad designs feature directionally scattered surfaces that not only disperse and absorb sound waves but also visually mimic disorientation. These designs can be arranged either individually or in combination to create limitless customizable patterns, meeting the needs of a variety of spatial applications. Variation in thickness, fiber mix, color, as well as flecks + surface blemishes are an inherent + unavoidable feature. Designs specified with any printed face, including the WilsonArt® collection, will feature a white reveal along the beveled edges.

The Centered profile positions the tile's geometric peak at the center of the shape, creating a balanced, symmetrical look.

The Asymmetrical profile shifts the peak off-center, giving each tile a more dynamic, angular appearance that adds visual tension and a sense of movement to an installation.

Centered & Asymmetrical profiles perform identically for acoustics; the choice comes down to design preference of a more orderly, structured composition or a more energetic, irregular one.

NOTES:

- The Pelle Collection is produced using a wide range of distinctive leather finishes in five unique patterns, applied to a black, semi-rigid PET felt panel. The leather is precision-cut and arranged with intentional spacing, allowing the black felt to emerge between each shape. The result is a harmonious interplay of materials, textures, and contrasts, delivering exceptional sound absorption. Affarone and Volante are available exclusively as tiles, while Strisce is offered solely as a panel. The designs in the Pelle Collection each align on all four sides, perfect for large-scale or small-scale installations.
- The Pelle Collection features two types of leather finishes: Calf Stamp (Milano, Napoli, Peralta & Roma) and Calf Smooth.
- Because leather is a natural material, variations in grain and texture will occur from tile to tile. Once installed, these subtle differences in direction and character are considered an inherent part of the product's authentic appeal. This natural variation enhances the richness and depth of the finished installation.

Designed for use on ceilings, ecoustic® Blade is ideal for new and existing fit-outs to maximize sound absorption. The unique system features a black acoustic scrim backing to enhance sound absorption, which is ideal for architectural installations where reverberation control is critical to room comfort and amenity. ecoustic® Blade tiles are designed for modularity and are pre-finished allowing for simple and efficient installation and ease of ongoing maintenance. The design results in a linear wood finish with minimal onsite labor for installation.

INTERLINK IQ ELECTRICAL

Specification guide for IQ Electrical on Training tables

Determine table width, the type of power access being used (3″ grommet or 4x8 pop-up) and the desired number per table (Columns 1, 2 or 3). The table will then identify the type and quantity of components needed per table along with the maximum table run. Note that this is in addition to the Power base in-feed which is needed for each run. For example, a 48″W table with two 3″ power grommets per table will require (1) HQH5-3 harness and (1) HQH1-3 harness per table with a maximum run of four tables.

4-TRAC HARDWIRE ELECTRICAL SYSTEM

4-Trac Electrical System

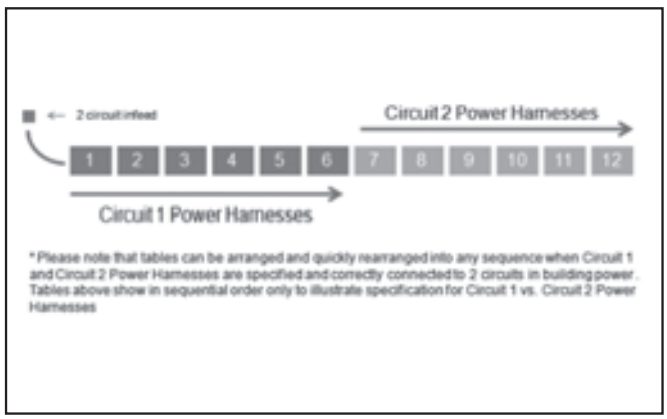

The 4-Trac Electrical System is a UL-recognized Manufactured Wiring System that seamlessly passes power from one worksurface to another. This low-profile non-sequential electrical system allows tables to be "daisy-chained" together in any desired order and allows users to reconfigure quickly due to simple connectable/disconnectable links.

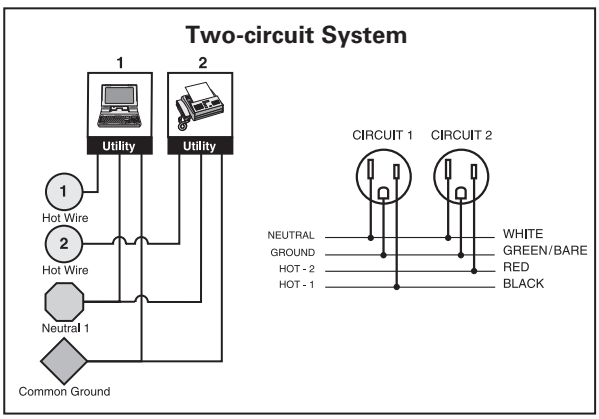

- Meets requirements of UL 183 and National Electric Code Article 604
- 4-Wires, 2-circuits, 20 Amps each (Circuit 1 and Circuit 2 only)
- 13 Duplex Receptacles per circuit, 26, 15 Amp Duplex receptacle per power in-feed
- Electrical system attaches directly to underside of worksurface with included brackets
- Up to twelve tables can be linked together

Steps for Electrical Specifications:

- Determine how many rows of tables are needed and order the following:
  - One HMAPLATE per row (or power in-feed)
  - One HMACABLE per row (or power in-feed)
- Order one power harness per table in each row
  - For 1-6 tables in a row (see illustration 1)
    - Order Circuit 1 Power Harnesses (ex. If powering six 24x60 tables order six sets of HMAPOWER60)
  - For 7-12 tables in a row (see illustration 1)
    - Order Circuit 1 Power Harness for first six tables and Circuit 2 Power Harness for remaining tables (ex. If powering eight 24x60 tables, order six sets of HMAPOWER60 and two sets of HMAPOWER602)
- Order one set of ganging hardware per table (ex. HMAGANG)
- Determine which accessories are needed:
  - Power Hub model HGRMTAC — to access power at worksurface.
  - Data Grommet model HGRMTDATA — to access data at worksurface.
  - Wire Management strips model HBTMS — for vertical and horizontal wire management.

INFORMATION ON ORDERING PARTS

When parts are needed to repair HON products, the following guidelines should be followed to expedite the process.

1. Warranty orders are submitted on the Website at hon.com via the Quick Claim tool.
2. There are no discounts applied to parts. Pricing quoted is the net value. Parts pricing is subject to change without notice.
3. For a part not covered by warranty applicable shipping charges will apply.
4. All keys are $6.00 each plus a shipping and handling fee of $3.00 per shipping location.
5. Parts may be paid for with an approved credit card. Approved Cards: MasterCard, VISA and American Express.
6. Payment terms for invoiced parts are Net 30 days.
7. Due to short leadtimes on parts, no changes will be accepted after the order has been placed.
8. When placing a **warranty** parts order:

   If the product is under warranty, the product serial number must be provided. Most finished goods products have a serial number placed on them at the factory. The label containing the serial number is located:

   Vertical Files — right side of the uppermost drawer

   Lateral Files — left side of the uppermost drawer or shelf

   Desk Towers — outside of top drawer

   Desks, Credenzas, & Returns — on the outside, kneespace side of the top drawer. Fully extend the drawer to find it.

   Desks, Credenzas, Corner Units, Bridges, Peninsulas & Returns without drawers — underside of top

   Tables and Stands — underside of the top

   Table Trucks — underside of side rail

   Cabinets & Bookcases — left inner side of the case

   Modular Component Top and Backs — underside of top

   Modular End Panels — top inside surface

   Reception Stations — top inside surface of back panel

   Organizers — top inside surface of left end panel near back panel

   Vertical Paper Manager — back panel inside surface near top

   Pedestals — bottom drawer right side exterior

   Seating — underside of the seat

   Panels — underside of the top cap

   Hutches, Storage Units, Overhead Storage — underside of the shelf

   Hanging Bookshelves — underside of shelf

NOTE: Removal of the serial number tag from the product voids the warranty.

An important note regarding Product Serial Numbers:
HON desks, tables, chairs, files and systems components are tagged with a serial number. This number helps us identify *when and where your product was made,* and to identify and correct the root causes for the problem. NEITHER THE DEALER NOR THE CONSUMER SHOULD REMOVE THIS TAG UNDER ANY CIRCUMSTANCES. To do so immediately voids your Warranty coverage for that particular item *and prevents us from further identifying it.* Instead, please transcribe the number and call your Dealer.
