

# CellAED™

## TRAINER

### LEARN. PRACTISE. REPEAT!

Designed to help you safely practise the application and use of your CellaAED®

### Build confidence in using your CellaAED®

The first few minutes of a sudden cardiac arrest are critical. Knowing how to use your CellaAED® confidently and acting quickly could be the difference between life and death!

That's why we've developed CellaAED *TRAINER*™ — a reusable replica of your CellaAED® you can use to gain confidence with SNAP PEEL STICK™ and listen to the voice instructions in a range of scenarios on the App.

Same size and feel as your CellaAED®

Visually differentiate your TRAINER device from CellaAED® by the yellow colour\*

Internal magnetic closure to repeat the snap activation

Push button to retract ribbon cable and reset the TRAINER to the start position

Reusable liner design covers the adhesive gel pads

Washable pads to practise applying in the correct position\*\*

## Comprehensive Training

Using your CellaAED TRAINER™ with the accompanying App is ideal for teaching and group training exercises to simulate real life scenarios of sudden cardiac arrest. The App enables you to hear the same voice instructions you would hear when using your CellaAED® to guide you through the CPR and defibrillation process.

- Get familiar with hearing each voice instruction and practise the associated action at your own pace
- Play pre-set scenarios and gain confidence in CPR and pad positioning for an adult or infant
- Choose from a variety of random scenarios to improve your listening and responsiveness
- Access the instructional video to identify sudden cardiac arrest through to how to deactivate your CellaAED® after use

<sup>1</sup> St John Ambulance, Nov 2016

\* For training purposes only and will not defibrillate

\*\* Reusable pads can be removed and washed in warm soapy water to reinstate the adhesiveness as it wears over time
