

Fall prevention

Noctuly's®

The night-time safety assistant

Detects rising at night • Automatic lighting • Alerts caregivers

Helping to prevent falls

Intelligent lighting

In 75% of cases, falls occur at night on the way to the toilet.

Noctuly's® detects rising and automatically provides indirect lighting, assisting a resident at night in their movement within the room. With its light directed towards the floor, Noctuly's® won't dazzle residents and it helps them find their balance when getting up.

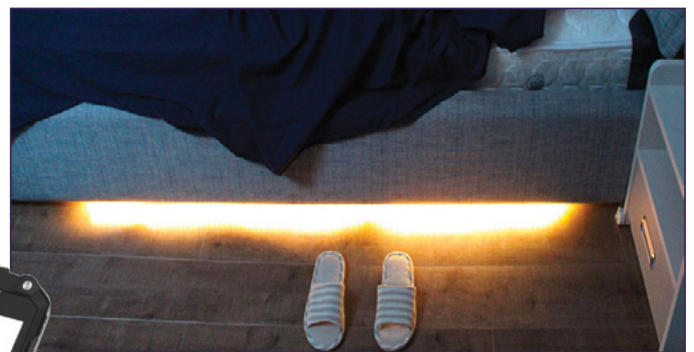

A **night-light mode** is also available to provide a constant light according to the needs of each resident.

Automatic lighting

Night-light mode

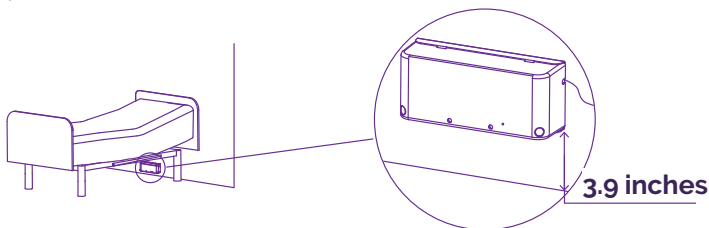

Alerts on the badges thanks to Domalys Online.

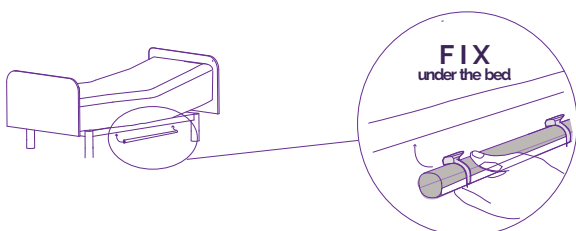

In the event of rising, staff are immediately alerted on a smart card so they can intervene as quickly as possible. Connected to **Domalys Online**, Noctuly's offers comprehensive monitoring of each resident.

Easy under-bed installation

1) The **detection unit** is fixed under the head of the bed

2) The **lighting bar** is placed under the bed, on the side used to get up
