

Personalized care

Oxalys®

*The table with a thousand and one uses*

## Designed to suit everyone

### For every activity: meals, games, reading, and more

Thanks to its movable column and **U-shaped base**, Oxalys® can be used with wheelchairs, and allows residents to take full advantage of its large top at all times during the day. The height and angle of the top are adjustable to meet the needs of every activity (meals, games, or just relaxing).

**Adjustment** is easy, using a lever to adjust height, and a handle to lock the desired angle of the top.

Our **casters** have been selected to meet your requirements: **easily moved, vibration-proof**, protected from dust and hair, sealed, with an integrated foot-operated brake.

The **magnetic strip** on the top is easily removed for daily cleaning.

Therapeutic position

Horizontal position

Lectern position

The table's off-center column provides enhanced comfort. It can be used by individuals (in-room) or in groups, for personal use (reading for example) or for shared activities (e.g. meals, games). The shape of the top has been designed so that tables can be arranged in an octagonal form, allowing for activities that include up to 7 residents and a caregiver.

## Easy to use

## Top : available colors
