1.1 Your New Stoddart Power Soak Product

Thank you for purchasing a Stoddart Power Soak ware washing system.

Your new Power Soak pot, pan and utensil washing system will provide years of dependable, efficient and trouble-free service.

As a Power Soak owner, you will benefit in numerous ways:

- Your ware washing operation will be more efficient
- Pots, pans and utensils will be cleaner
- The overall level of sanitation in your scullery area will improve
- Ware washing hours will decrease as employee morale increases
- Chemical and water usage will decrease

Every system is manufactured to last, with only high-quality, heavy-duty, 14 gauge stainless steel used in its construction. All electrical components used in a Power Soak system are of the highest quality. The faucets and drains are designed for quick filling and emptying of the system's sinks.

Power Soak can be tailored with many variations to meet the needs of Power Soak customers. The illustrations shown in this document cannot match all the possible machine configurations, however; the information will apply even if a machine does not match the illustration. The general configuration of a machine will start at the work flow in the scraping area and/or wash tank and finish in a sanitise tank and/or on a drain board. The units that start with the scraping area and/or wash tank on the left are referred to as a "left to right" or "left hand" unit. A "right to left" or "right hand" unit will start with the scrap area and/or wash tank on the right hand side.

At Stoddart, we take pride in manufacturing the Power Soak line and are committed to standing behind our customers and products 100%. Should you ever need assistance, please contact the Stoddart Service Department 24/7 at **1300 307 289.**

Carefully read this instruction booklet, as it contains important advice for safe installation, operation and maintenance. Keep this booklet on hand in a safe place for future reference by other operators or users.

Disclaimer

The manufacturer/distributor cannot be held responsible or liable for any injuries or damages of any kind that occur to persons, units or others, due to abuse and misuse of this unit in regards to installation, removal, operation, servicing or maintenance, or lack of conformity with the instructions indicated in this documentation.

All units made by the manufacturer/distributor are delivered assembled, where possible, and ready to install. Any installation, removal, servicing, maintenance and access or removal of any parts, panels or safety barriers that is not permitted, does not comply in accordance to this documentation, or not performed by a **TRAINED AND AUTHORISED SPECIALIST** will result in the **IMMEDIATE LOSS OF THE WARRANTY**.

The manufacturer/distributor cannot be held responsible or liable for any unauthorised modifications or repairs. All modifications or repairs must be approved by the manufacturer/distributor in writing before initiating. All modifications or repairs performed to this unit must be performed at all times by a **TRAINED AND AUTHORISED SPECIALIST**.

Stoddart design, manufacture & distribute Food Service Equipment (appliances) exclusively for the commercial market. This appliance is not designed nor intended for household or domestic use and must not be used for this purpose.

This product is intended for commercial use, and in line with Australian electrical safety standards the following warnings are provided:

- This product is not intended for use by persons (including children) with reduced physical, sensory or mental capabilities, or lack of
 experience and knowledge, unless they have been given supervision or instruction concerning the use of the product by a person
 responsible for their safety. Children should be supervised to ensure that they do not play with the product
- If the supply cord is damaged, it must be replaced by the manufacturer, its service agent or similarly qualified persons in order to avoid a hazard

Warranty & Registration

1.2 Australia and New Zealand Warranty

All Stoddart manufactured and distributed products are covered by Stoddart's standard Australia and New Zealand Product Warranty. For product registration and to view the warranty period, full terms, conditions and exclusions your new product, follow the below Link/QR code.

www.stoddart.com.au/warranty-information

Due to continuous product research and development, the information contained herein is subject to change without notice.

1.3 Key Standards

1.3.1 Important

When using any electrical unit, safety precautions must always be observed. Our units have been designed for high performance. The unit must be used exclusively for the purpose for which it has been designed.

- All units MUST be installed according to the procedures stated in the installation section of this manual
- In the case of new personnel, training is to be provided before operating the equipment
- **DO NOT** use this unit for any other purpose than its intended use
- DO NOT store explosive substances such as aerosol cans with a flammable propellant in or near this unit
- Keep fingers out of "pinch point" areas
- Unit is not waterproof DO NOT use jet sprays, hoses or pour water over/on the exterior of the unit
- Only use this unit with voltage specified on the rating label
- DO NOT remove any cover panels that may be on the unit
- DO NOT use sharp objects to activate controls
- If any fault is detected, refer to troubleshooting
- The manufacturer declines any liability for damages to persons and/or things due to an improper/wrong and/or unreasonable use of the machine
- Only specifically trained/qualified Technicians (Stoddart, one of our service agents, or a similarly qualified persons) should carry out any and all repairs, maintenance and services

1.3.2 Tools Required

- Scourer
- Cloth
- Wash Up Gloves (Optional)

1.3.3 Chemicals

Manual

- KAY QSR Power Soak Detergent
- KAY Sink Sanitiser
- KAY Chlorine Test Strip
- KAY QSR Daily Beverage Tower Drain Cleaner

Automatic

- KAY Power Soak Sink Detergent 7.5 litre bladder (Code CNCL.0091)
- KAY Quat II Sanitiser 7.5 litre bladder (Code CNCL.0090)
- QT40 Quat Test Strip
- KAY QSR Daily Beverage Tower Drain Cleaner

1.3.4 Hazards

- Chemical: Only use approved chemicals, and use as directed. Never mix chemicals
- **Burns:** Follow procedures and use PPE as required
- **Cuts:** Follow procedures, do not place any sharp objects in the sink

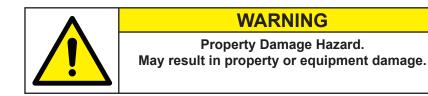

1.4 Explanation of Warning Messages

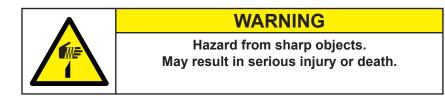

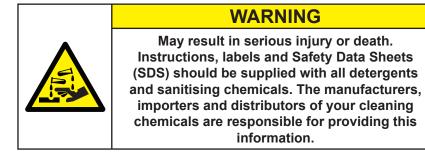

WARNING

Personal Injury and Property Damage hazard. May result in serious injury or death. May cause extensive equipment damage.

Children must not be allowed to play in the sinks, on counter tops or with the controls of the Power Soak equipment. Cleaning or use of this machine must not be done by children without supervision.

This machine can be used by persons with reduced physical, sensory or mental capabilities or lack of experience and knowledge if they are given supervision and instruction concerning use of the appliance in a safe way and understand the hazards involved.

There is a potential of drowning for any person whose head becomes submerged in the fluid contained in the sinks along with other hazards identified in this manual.

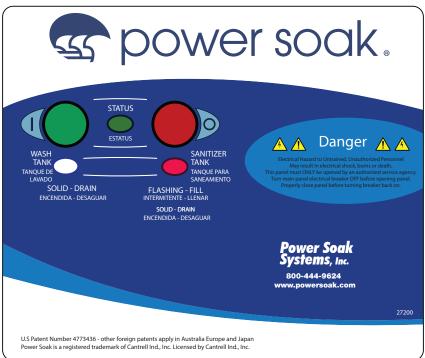

1.5 Product Overview

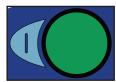

2.1 Controls and Features

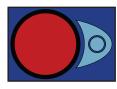

2.1.1 Start Button - Green

Starts the washing action. If cycle does not start, refer to trouble shooting section.

2.1.2 Stop Button - Red

The Stop button is red and stops the wash action.

2.1.3 Status Light - Green

The Status Light will be green when it is illuminated.

- Slow Flashing "POWER ON" The Power Soak System is energised and read to fill
- Solid Illumination "READY" Wash tank is full, system is ready to start wash cycle. (Will not become solid until after start button is pushed.)

2.1.4 Wash Tank Light - Blue

The blue WASH TANK light is used to indicate when the wash fluid needs to be changed. After a standard four (4) hour wash cycle, the pump becomes disabled and the system must be drained and refilled.

2.1.5 Sanitiser Tank Light -Red

•

The red Sanitiser Tank Light is used to indicate when the sanitiser fluid needs to be either filled or drained.

- Slow Flashing "FILL SANITISER TANK"
- Solid Illumination "CHANGE SANITISER SOLUTION" After two (2) hours, the sanitiser tank must be drained and refilled

Due to continuous product research and development, the information contained herein is subject to change without notice

www.stoddart.com.au www.stoddart.co.nz

💁 power soak..

3.1 initial Setup

- The STATUS light will flash indicating that the unit is powered and waiting to be started
 - Slow Flashing "POWER ON" The Power Soak System is energised and read to fill
 - Solid Illumination "READY" Wash tank is full, system is ready to start wash cycle. (Will not become solid until after start button is pushed.)

- At the beginning of each day or shift, fill the sinks with water
- All sinks should be filled to, but not above the "Water FII Line"

3.2 Pre-Rinse

- · Use this pre-rinse sink to remove any excess dirt or build up before washing
- Excess soils should be removed from the pots and pans prior to dropping them in the wash tank. Deposit the excess soils into a garbage can. Some systems may have an optional pre-scraping area with a pre-rinse spray. If so, soils may be deposited into the scrapper sink
- Ensure the scrap collection tray is in place and emptied regularly

Due to continuous product research and development, the information contained herein is subject to change without notice.

3.2 Operation Information

3.2.1 Properly Scraping Pots and Pans

Excess soils should be removed from the pots and pans prior to dropping them in the wash tank. Some systems may have an optional pre-scraping area with a pre-rinse spray. If so, soils may be deposited into the scrapper sink. Empty the scrap collection tray regularly.

3.2.2 Loading and Using the Wash Sink

Excess soils should be removed from the pots and pans prior to dropping them in the wash tank. Deposit the excess soils into a garbage can. Some systems may have an optional pre-scraping area with a pre-rinse spray. If so, soils may be deposited into the scrapper sink. Empty the scrap collection tray regularly.

The Power Soak is a "random loading" system. This means that Power Soak items are not racked for washing. Instead, they are randomly loaded one at a time.

As items are brought to the system and scraped, they should be immediately dropped into the wash sink. If there is no movement of items in the wash sink, or if items are stationary above the waterline, the system has been over loaded and some items must be removed. It is very important not to overload the wash sink, as it reduces the effectiveness of the wash action.

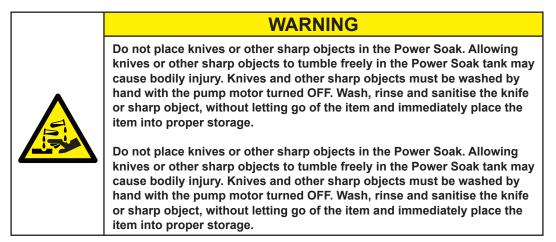

Some pots and pans stack for storage, this is referred to as "nesting" when it occurs during a Power Soak wash cycle. Make sure that nested items are separated and loaded one at a time. Nested items in the wash sink will not be washed properly.

Power Soak is a "continuous motion" system. This means that the system does not operate on a set cycle time like cabinet-type washing systems. Instead, during normal operating hours where washing is required, the system is (normally) left running.

The Power Soak is energy efficient, and it does not cause excessive wear to leave it running continuously. Typically, it takes between three to fifteen minutes to wash items. Some heavily soiled or burnt-on items may take longer to clean.

3.2.3 Loading and Washing Utensils

Each Power Soak system comes with a utensil basket that hangs in the wash sink. All utensils and other small wares should be loaded into and washed inside this basket.

3.2.4 Unloading the Wash Sink

The employee responsible for pot washing should routinely pass by the Power Soak and remove clean items from the wash sink. Items that are not 100% clean can be quickly finished off with a scrub pad or dropped back into the wash sink for additional cleaning. It is recommended to turn the Power Soak wash action off to unload items from the wash sink, but it is not requirement to turn the wash action off to load or unload items from the wash sink that could cause bodily harm, however moving pots and pans may cause harm.

power soak

3.3 Wash Tank 3.3.1 Wash Sink Set Up

 WARNING

 Temperatures higher than the recommended 48°C can cause scalding if contact is made with a person's skin

Fill the wash sink with water up to the fill line. The water temperature must be below 48°C, If the water temperature is above 48°C the Power Soak will not start

- You can use the hot and cold taps on the faucet to adjust the water to the appropriate temperature.
- Power Soak units have a built in heater element which will compensate for a cold water fill and correct over temperature water. (A good rule of thumb is that the water should be hot to the touch but not so hot that it is uncomfortable).
- For units with dual water fill lines, fill to the upper waterline when washing sheet pans held in racks and to the lower waterline for all other purposes

Automatic Dispenser	Manual Set Up
After the sinks have been filled with water, the automatic dispenser will add the correct pre-programmed amount of detergent into the wash sink. Stir to mix.	While filling wash sink compartment to fill-line (80L) with water, add 2 packets of KAY® QSR Powersink Detergent. Stir to mix.

3.3.2 Wash Sink Operation

Once the Wash Sink is set up, pre-rinse the items and place it into the Power Soak Wash Sink one at a time. Turn on the washing cycle motion by pressing the green start button on the control unit. Typically, it takes between 3 to 15 minutes to wash items. Some heavily soiled or burnt-on items may take longer to clean. If required, use a scourer to remove remaining dirt on items that are

- not fully clean.
 - If required, you may use the dedicated wash up gloves.
 - Leave the Power Soak washing cycle ON during operating hours where washing is required. Power Soak is a "continuous motion" system. This means that the system does not operate on a set cycle time like a standard dishwasher. To save energy, turn it OFF by pressing the red stop button if there is no washing required
 - If there is no movement of items in the wash sink, or if items are stationary above the waterline, the system has been over loaded and some items must be removed. It is very important not to overload the wash sink, as it reduces the effectiveness of the wash action.
 - Stacked pans/items is referred to as "nesting", items are not washed properly when this occurs during a Power Soak wash cycle. Make sure that nested items are separated and loaded one at a time.

If cleaning bulky items such as broiler parts or fry dump parts, DO NOT turn on the washing cycle.

All utensils and other small wares should be loaded into and washed inside the utensil basket. Each Power Soak system comes with a utensil basket that hangs in the wash sink.

 Do not place knives or other sharp objects in the Power Soak. Allowing knives or other sharp objects to tumble freely in the Power Soak tank may cause bodily injury. Knives and other sharp objects must be washed by hand with the pump motor turned OFF. Wash, rinse and sanitise the knife or sharp object, without letting go of the item and immediately place the item into proper storage

It is recommended to turn the Power Soak wash action OFF to unload items from the wash sink. It is not requirement to turn the wash action OFF to load or unload items from the wash sink. There are no moving parts within the wash sink that could cause bodily harm, however moving pans may cause harm.

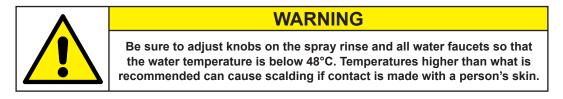

• The WASH TANK light will illuminate to indicate the water and soap solution must be drained and changed every 4 hrs.

Due to continuous product research and development, the information contained herein is subject to change without notice.

3.4 Rinse Tank

3.4.1 Immersion Rinsing

Fill the Rinse tank (middle tank) with water that is approximately room temperature (24°C). You can use the hot and cold taps on the faucet to adjust the water to the appropriate temperature.

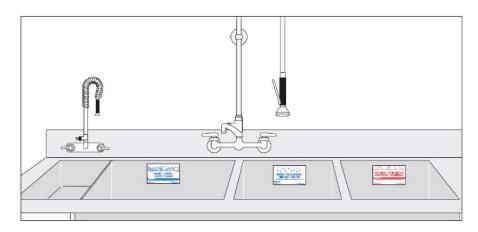

Drain and refill this tank as necessary to maintain clean water in the sink.

3.4.1 Spray Rinsing

If rinsing using the water spray, leave the tank empty with the drain open.

g power soak.

3.5 Sanitiser Tank

3.5.1 Sanitiser Tank Set Up

Fill the sanitiser tank using the faucet with room temperature water (approximately 24°C). Use the hot and cold taps on the faucet to adjust the water to the appropriate temperature.

Automatic Dispenser	Manual Set Up
After the sinks have been filled with water, the automatic dispenser will add the correct pre-programmed amount of detergent into the wash sink. Stir to mix.	While filling wash sink compartment to fill-line (80L) with water, add 2 packets of KAY® QSR Powersink Detergent. Stir to mix.
	Strip I for the specified sanitiser solution)
 Rip a short amount of test strip and dip it in the solution for 10 seconds Compare to the color chart on the container, if the solution reads less than 150 ppm (200 ppm target), make a fresh solution 	 Dip one test strip in the solution for 1 second Compare to the color chart on the container to ensure 100ppm is achieved

Note: If using the sanitiser spray bottle, fill with from the sanitser tank with freshly mixed solution.

3.5.2 Sanitiser Sink Operation

- Immerse washed and rinsed utensils/small wares in the sanitiser solution for at least 1 minute
- Remove and place on a clean, sanitised surface to air dry
- The red Sanitiser Tank Light will illuminate to indicate the sanitiser solution needs to be drained and refilled every 2 hrs

Between each water change and at the end of each night, all tanks and drain boards should be thoroughly cleaned with hot, soapy water. It is also recommended to wipe down all the tanks and drain boards with a sanitising agent. Ask your chemical provider to recommend a sanitiser for this application.

g power soak.

3.5 Optional Chemical dispenser

IMPORTANT

Ensure the Detergent and Sanitiser lines are securely connected to the automatic dispenser before operation.

3.5.1 Automatic Chemical Dispensing

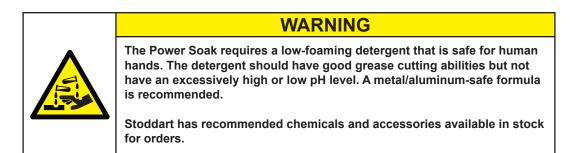

- 1. Wear disposable gloves when handling the detergent and sanitiser bladder and fitting the adaptor caps
- 2. Place the detergent or sanitiser bladder in the wire basket and remove the valve cap
- 3. Place the connector on the bladder and fully tighten. This will puncture the seal for the detergent/sanitiser to flow into the lines
- 4. Once sanitiser and detergent bladders are replaced, locate the prime buttons under the wash detergent and sanitise pumps as shown below
- 5. Press and hold the prime buttons until chemical flows from the injector nozzle
- 6. After priming both lines, clean up any excess detergent or sanitiser remaining in the tanks

Due to continuous product research and development, the information contained herein is subject to change without notice.

3.6 Requirements for Detergents and Sanitisers

3.6.1 Detergent and Sanitiser

Kay Liquid Storm is the recommended chemical and is available from Stoddart. (Order form on Page 17).

Remember, improper detergents may damage equipment!

Kay Quat II Sanitiser is the recommended chemical and is available from Stoddart. (Order form on Page 17).

The method of sanitising used in your Power Soak system is a "chemical sanitising" method. There are a number of products on the market that work well. Most standard sanitisers are acceptable.

Please note the Power Soak is different to standard dish washing machines.

To achieve consistent results and maximum hygiene, standard dish washing detergents **CANNOT** be used with a Power Soak. A specialised, low temperature detergent is required for these units. One of Power Soak's many advantages is the low temperature required which, as well as producing a pleasant work environment within the pot washing area, increases safety by eliminating risks such as burns.

Be mindful that standard dish washing detergent is not low temperature detergent and is not suitable.

Failure to use the correct detergent will open the operator of the Power Soak up to food safety risks as the cleaning action and sanitisation standard the unit has been designed to achieve will not be reached. Furthermore, standard detergent is a high alkaline product which is not mild on hands and skin, unlike the recommended product.

Stoddart has recommended chemicals and accessories available in stock for orders. please use the order form on Page 17.

KAY Liquid Storm (7.5 litre bladder) Code - CNCL.0091

- Low Suds.
- Low temperature action.
- Mild on hands.
- Maximum grease-cutting performance.
- Effective powerful general purpose cleaner.
- Suitable for automatically dispensing with Peristaltic Pump.
- Requires adaptor cap for auto dispensing.

KAY Quat II Sanitiser (7.5 litre bladder) Code - CNCL.0090

- EPA-registered formula is a hard-surface sanitiser with a registered range of 150-400 ppm and target of 200 ppm.
- Automatically proportioned, closed system from dispenser or peristaltic pump.
- Colour-coded, icon-labelled packaging encourages correct use.
- Used in all departments with 3 Comp. or Power Soak Sinks.
- Applications: Kitchenware / Stationary Equipment / Food-Contact Surface.
- Requires adaptor cap for auto dispensing.

4.1 Preventive Maintenance

Your system requires minimal, routine preventive maintenance. As such, the following should be done on a routine basis to ensure that your system remains reliable:

WARNING

If the liquid level sensors are not cleaned regularly, the machine may fail to operate; or it may be possible to run it without water, which will cause serious damage to the Power Soak. Running the machine without water in the wash tank will cause damage that is not covered by warranty.

4.1.1 Daily

Clean the liquid level sensors with a wash cloth and soapy water

- These sensors are located on the side walls of the wash and sanitiser tanks. They are the white plastic discs with metal centres. Clean the sensor faces thoroughly. If cleaned regularly, a wash cloth and soapy water are all that is required
- If the liquid level sensors are not cleaned regularly, the machine may fail to operate; or it may be possible to run it without water, which will cause serious damage to the Power Soak. Running the machine without water in the wash tank will cause damage that is not covered by warranty

- · Remove the utensil basket and clean the inside and outside with a wash cloth/scourer and soapy water
- Using wash cloth/scourer and soapy water, clean the inside of each sink to remove any build up
- Ensure the jets in the wash sink is free of any build up
- Pour Kay QSR Daily Drain Cleaner into the drain. See recommended dose on the bottle. DO NOT follow with a water rinse

4.1.2 Monthly

- Turn OFF the Power Soak's dedicated isolator outlet
 - Clean the pump motor fan shroud with a damp cloth (squeeze the water out until there's no excess water dripping)
 - D0 NOT spray anything directly to the motor.
 - The motor shroud is the "vented" cover located at the end of the motor (closest to the control panel). Keeping this clean will prevent grease and dust from accumulating in the cover's openings, which can obstruct the airflow that cools the motor.
- Wipe over with paper towel to dry
- Turn the isolator outlet ON ready for next use

Due to continuous product research and development, the information contained herein is subject to change without notice

4.1.3 Optional Deep Cleaning and "Night Washing"

The Power Soak can be programmed as a "total cleaning system"! Remember, any item in your operation that can be submersed for cleaning and is not fragile or sharp can be washed without labour in your Power Soak!

Extremely soiled items and pieces of cooking equipment that require regular, intensive cleaning can be washed in the Power Soak system overnight.

Start with a fresh washing solution. Load the items to be deep cleaned into the Power Soak's wash tank. Press the green START button to start the wash action. Leave it to run overnight. A different chemical may be beneficial for this cycle, contact the Stoddart Service Department. The overnight cleaning will automatically turn the wash action on and off throughout the night.

No attention needs to be paid to warning beacons that might affect the operation during normal business operations.

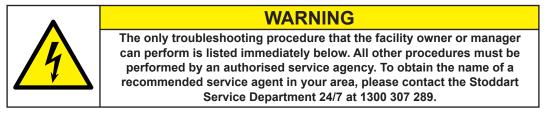

Here are some examples of items that are typically deep-cleaned overnight in the "Night Wash" cycle:

- Hood Filters (Some Styles)
- Roasting Pans
- Stove Tops
- Frying Equipment
- Stock pots
- Carbonised items
- Soiled storage racks
- Trivetts
- Char Broil Tops

Many other items in your operation may qualify. Be creative and set up a regular "Night Wash" program for improved sanitation. Items that have been cleaned overnight can be removed, rinsed, sanitised (if necessary) and put away or back in place.

4.2 Troubleshooting

Prior to calling, please note the "Error Code" (if any) that can be identified by observing LED #2 on the UPM. If there is a control logic error, LED #2 will flash with a "blinking" pattern. The definitions for the patterns are as follows:

4.2.1 Error Codes

*	Repr	esents a "short" flash	~ Represents a "long" fl	ash
	1	~~~*	Liquid Level Error	Clean liquid level sensor
	2	~~~**	Temperature Sensor Error	Contact Stoddart Service Department 24/7 at 1300 307 289.
	3	~~~***	Over Current Error	Contact Stoddart Service Department 24/7 at 1300 307 289.
	4	~~~****	Over Temperature Error	This error code cannot be reset until the fluid is drained below the low level sensor in the wash tank. Refill with correct temperature water.
	5	~~~****	Current Sensor Error	Contact Stoddart Service Department 24/7 at 1300 307 289.
	6	~~~*****	Membrane Error	Contact Stoddart Service Department 24/7 at 1300 307 289.

4.2.2 Troubleshooting Procedures

Issue	Actio	'n	
Water Not Pumping / Phase Rotation ("JOG" Feature)	is en •	npty: • Press and hold the green STA	correct direction, The control unit has a feature that allows the motor to be "jogged" when the wash tank RT button for 5 to 10 seconds and watch the fan blades inside the motor fan cover. After holding the start delay, the motor will start for a few rotations and automatically stop (when wash tank is empty) check the wiring connections
		A	rrow indicating the direction of rotation is located on the pump housing.
		1	
		Look For	Correction
	1	Look For Slow Flashing Green Light	Correction Clean Liquid Level Sensors. Fill sink with water to proper level
	1		
	<u> </u>	Slow Flashing Green Light	Clean Liquid Level Sensors. Fill sink with water to proper level
	2	Slow Flashing Green Light Solid Blue Light	Clean Liquid Level Sensors. Fill sink with water to proper level Clean Liquid Level Sensors. Drain sink and refill with water to proper level

Due to continuous product research and development, the information contained herein is subject to change without notice.

www.stoddart.com.au www.stoddart.co.nz

g power soak.

LED Status on Control Panel Overlay	It is recommended that the condition of the system be verified by first observing the "STATUS" LED's on the front of the control panel (Refer to Page 4.2.1). If necessary, take corrective action prior to performing any further troubleshooting.				
Wash Pump/Heater Will not Operate	Heater Will not If after reviewing the status of the control panel LED's, there is still an operating problem, refer to the following troubleshootin • Check to make sure the main electrical power breaker for the Power Soak system is in the "ON" position • Check to make sure the wash sink is filled to the waterline • Check to make sure that the liquid level sensors are clean and free of any debris or grease. The liquid level sensors are side walls of the wash and sanitiser sinks (the white plastic disc with a metal centre) If the above trouble shooting procedures do not correct the problem, you must contact the Stoddart Service Department				
		Look For	Correction		
	1	Water temperature < 43°C	Contact Stoddart Service Department		
	2	Water temperature between 43°C and 48°C	Normal operating temperature		
	3	Water temperature > 48°C	Water too hot – reduce temperature to 46°C with ice or cold water
