Heat Source: 500mm clearance from an external heat source is required in order to protect the oven control components and allow access to the service panel. For clearances under 500mm, it is mandatory for Stoddart heat shields to be fitted while still maintaining a minimum clearance of 300mm to provide access to the service compartment. Failure to adhere to minimum clearances may void the oven warranty or add service costs due to lack of access.

Non-Heat Source: Generally 300mm clearance is required from the control panel side to allow access to the service panel. Any distance under 300mm, may add service costs due to lack of access.

*Clearance requirements
*Drain line must be vented
