Made

ABOUT OUR PRODUCTS

Authentic hand-made bricks capture the essence of craftsmanship and heritage. Each brick is carefully molded, shaped, and fired, resulting in variations in color, texture, and size that add depth and richness to any structure. The imperfections and irregularities inherent in hand-made bricks tell a story, reflecting the human touch and the passage of time. Hand-made bricks infuse a sense of authenticity and timeless beauty into architectural endeavors.

Imperial bricks, also known as traditional bricks, are the older type of bricks used in the United Kingdom. We have two ranges of sizes in this type of brick.

Metric bricks, on the other hand, are used in most parts of the world and have dimensions of 215mm in length, 102.5mm in height, and 65mm in width.

Linear is a type of brick that is a popular choice for modern architecture and design, with its clean lines and geometric shapes creating a sense of order and symmetry. Linea bricks are available in a range of colors and sizes, making them a versatile choice for a variety of building projects.

Brick cladding refers to the practice of using bricks as an external covering or facing material for buildings. Bricks cladding lends an earthy and rustic appeal, adding warmth and texture to any building's exterior. Its enduring beauty stands as a testament to the timeless nature of brick craftsmanship.
