Hands Up!							
Credit: Martin Wolf, IceCube/NSF	8	9	10	11	12	13	14
It doesn't snow much at the South Pole but lots of snow accumulates there, and							
sometimes it needs to be moved. After digging out some old equipment, the crew	15	16	17	18	19	20	21
took a break to smile for the camera from their trenches.							
then trenenes.	22	23	24	25	26	27	28

Flagline							
Credit: Martin Wolf, IceCube/NSF	5	6	7	8	9	10	11
A winterover walks along a flagline, holding							
a large drill bit. Flaglines are crucial for safe travel at the South Pole, especially in winter, so they are regularly maintained, with new holes drilled and flags replaced as needed.	12	13	14	15	16	17	18

Nice Goggles!							
Credit: Moreno Baricevic, IceCube/NSF	5	6	7	8	9	10	11
IceCube winterover Moreno Baricevic took a photo outdoors of fellow winterover Celas							
Marie-Sainte wearing his goggles, and in doing so captured a nice reflected image of himself with a sun halo as his background.	12	13	14	15	16	17	18

South Pole Station							
Credit: Josh Veitch-Michaelis, IceCube/NSF	2	3	4	5	6	7	8
The Amundsen-Scott South Pole Station provides living quarters for people working							
at the Pole. During the summer season, the population rises. But in winter, there are only a few dozen or so "winterovers"—a select group of individuals who keep things	9	10	11	12	13	14	15
operational through the long Antarctic winter months. Here, the station is seen at twilight, before the full darkness of winter has set in.	16	17	18	19	20	21	22

The IceCube Lab by Night							
Credit: Wenceslas Marie-Sainte, IceCube/NSF	7	8	9	10	11	12	13
Twilight is a prolonged period at the South Pole, lasting weeks. Here, some light remains							
on the horizon while numerous stars and a	14	15	16	17	18	19	20
few faint streaks of purple from the aurora australis brighten the dark sky.

Polar Pride							
Credit: Wenceslas Marie-Sainte, IceCube/NSF	4	5	6	7	8	9	10
Pride is celebrated all over the world in							
June, including in Antarctica and at the South Pole. But this photo was taken during the height of summer at the Pole as part of "Polar Pride Day," observed in November	11	12	13	14	15	16	17
each year since 2020.	18	19	20	21	22	23	24

Under the Milky Way							
Credit: Martin Wolf, IceCube/NSF	2	3	4	5	6	7	8
It's a glorious sky to behold, as a winterover							
lies on the ice to gaze upward. From the camera's viewpoint, we see the Milky Way on the left and faint auroras growing stronger on the right across a star-studded sky.	9	10	11	12	13	14	15

Buried Car							
Credit: Wenceslas Marie-Sainte, IceCube/NSF	6	7	8	9	10	11	12
"Where'd we leave the car?" This vehicle was abandoned in its spot							
before winter set in. Although it's normally still quite dark in August, the sky begins to	13	14	15	16	17	18	19
brighten in early twilight and a bright moon is sufficient to navigate outdoors without							
flashlights.	20	21	22	23	24	25	26

Floating IceCube Lab							
Credit: Marc Jacquart, IceCube/NSF	3	4	5	6	7	8	9
The IceCube Lab houses the computers that collect data from all the detector's buried							
sensors. Located approximately a kilometer from the station, IceCube workers must trek out to the lab whenever hands-on attention is required. Here, on a day of low visibility,	10	11	12	13	14	15	16
they found the lab appearing to almost float in the air.	17	18	19	20	21	22	23
