

## Technical Information

### VersaFlow Mag 3000 Electromagnetic Flow Sensor Specification 34-VF-03-23, July 2021

#### Sanitary and Hygienic Solution

The VersaFlow Mag 3000 is the electromagnetic flow sensor for the food & beverage and pharmaceutical industry. The 3000 sensor is manufactured in conformance to FDA requirements and has all requested (needed) approvals available.

Together with the converters TWM 9000 or TWM 1000, the meter can be used for mixing and dosing applications. It also offers a special measuring mode for pulsating flow. Even for products with low conductivity e. g. glucose or high concentrated fruit concentrate the VersaFlow Mag 3000 is the first choice.

Since the industrial production of beer, water and milk increases rapidly, the produced volume gets larger and larger pipe sizes are needed. The VersaFlow Mag 3000 is the only hygienic electromagnetic flow meter with a pipe size of DN150 / 6" (where the hygienic standards list such a size).

#### Highlights

- Developed in cooperation with customers from the food industry
- Stainless steel design for hygienic and aseptic operation
- Unique gasket concept prevents gasket from expanding into measuring tube
- Suitable for all CIP and SIP processes
- All industry-specific connectors and lengths
- High form stability and vacuum resistance

#### Industries

- Food & Beverages
- Pharmaceuticals
- Cosmetics

Figure 1 – VersaFlow Electromagnetic Flow Sensor

#### Applications

- For aseptic and hygienic applications
- Mixing, dosing and filling
- Beverages, milk and other dairy products
- Drugs, acids and caustic solutions in CIP processs.
- For pulsating flow

## Features and Benefits

Figure 2 – Stainless Steel Mesh

### Stainless Steel Mesh

The reinforced PFA liner makes sure that the VersaFlow Mag 3000 keep its form stable. Even at high temperatures and very low pressure or vacuum the liner does not collapse and keeps its size. This is one reason why the meter is extremely accurate.

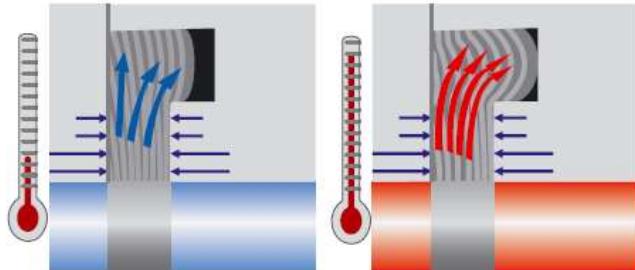

Figure 3 – Gasket Adaptor

### Unique Gasket Adapter Concept

With support of the TNO, a member of the European EHEDG organization, the sealing concept of the stainless-steel adapters has been redesigned. A novel gasket concept prevents the gasket from expanding into the measuring tube. During the CIP/ SIP cleaning procedure, the gasket expands into the special constructed "expansion chamber" and not into the pipe section. This leads to a sharp sealing at the edge of the pipeline and a perfect transition into the measuring section. Additionally, the gasket experiences less stress which results in a longer lifetime and reduced maintenance.

Figure 4 – Stainless Steel Housing

### Stainless Steel converter housing

A regular cleaning procedure from outside, where aggressive cleaning agents are used, can attack the standard polyurethane coat of the converter. In these cases, the cast stainless steel housing is recommended.
