INNOQ

A photograph of a festive outdoor gathering, likely a national holiday or celebration in Ukraine. In the foreground, a woman with blonde hair is seen from behind, holding a small Ukrainian flag (blue and yellow) on a white pole. She is wearing a white top with a red and black patterned collar. Another person's hands are visible on the right side, also holding up their hands. The background is filled with many other people, mostly young adults, some wearing traditional white shirts with red embroidery. The scene is set against a backdrop of city buildings and green trees under a clear blue sky.

Eight years in the making with 28,000 commits, 7,400 pull requests, and 4,100 closed issues, Scala 3.0 has been [released](#), delivering a "complete overhaul of the Scala language" with new features, updates to the syntax and type systems, and new tools for metaprogramming. The Scala [compatibility reference](#) heralds version 3 as a "game changer [...] that will greatly improve the day-to-day experience of every Scala programmer". Scala 3 is binary backwards-compatible with Scala 2.13, but not fully source-compatible. The new Dotty compiler can automatically migrate old code and report any remaining issues.

The Info

Was ist Scala 3?

- von Grund auf neu entwickelt
- zu großen Teile binär- und source-kompatibel zu Scala 2

Warum Scala 3?

- aufgeräumt & vereinfacht
- einfacher erlernbar
- bessere Binärkompatibilität
- Syntax für gängige Muster

The Essence of Dependent Object Types*

Abstract. Focusing on path-dependent types, the paper develops foundations for Scala from first principles. Starting from a simple calculus $D_{<:}$ of dependent functions, it adds records, intersections and recursion to arrive at DOT, a calculus for dependent object types. The paper shows an encoding of System F with subtyping in $D_{<:}$ and demonstrates the expressiveness of DOT by modeling a range of Scala constructs in it.

5. Opake Typen

A photograph of four aerobatic aircraft, likely the Blue Angels, flying in a precise vertical formation against a clear blue sky. Each plane is leaving a thick, white smoke trail. The planes are oriented vertically, pointing upwards. The background features wispy white clouds.

2. Metaprogrammierung

```
def fact(n: Int): Int =  
  if n <= 0 then  
    1  
  else  
    n * fact(n - 1)
```

```
inline def fact(inline n: Int): Int =  
  if n <= 0 then  
    1  
  else  
    n * fact(n - 1)
```

Weitere Anwendungsfälle

- Serialisierung/Deserialisierung
- Berechnung von Typen

Ökosystem

- Community hat die Migration früh mit begleitet
- wichtige Bibliotheken noch vor RC-Phase veröffentlicht
- Cross-Publishing wie bei Scala 2.x

Fazit

- Scala 3 ist eine „größere“ Sprache als Scala 2
- in vielen Fällen kann Code in Scala 2 weiterverwendet werden
- automatische Migrationshilfen existieren
- erleichtert gängige Programmiermuster stark
